# THIS COMPLETE, SIMPLE, PRACTICAL COURSE FOR SELF-INSTRUCTION WILL QUICKLY GIVE YOU *a complete mastery of* MATHEMATICS

5 VOLUMES 1,598 Pages Illustrated

## The Essential Knowledge For THE BETTER JOBS IN ALL BUSINESS AND INDUSTRY

*GET a better job—learn mathematics!* Mathematics is the basic requirement of all mechanical and scientific work, and of all business and industry based on science. Without this essential knowledge, even the most capable man is left behind while others forge ahead to bigger contracts, more money, *better jobs.* You need mathematics to improve, speed up, and check on your work and the work of others. Such basic training is quickly recognized today and gladly paid for. It singles you out from the crowd and gives you an advantage whether it is a matter of a job, a promotion or a contract.

## MATHEMATICS For Self Study

By J. E. Thompson, B.S. in E.E., A.M., Dept. of Mathematics, Pratt Institute

**A COMPLETE COURSE AND REFERENCE LIBRARY**

Now, if you will devote *only 10 minutes each day* to this easy home-study course, you can gain all the benefits of a complete training in mathematics. With this practical course, you start right from the beginning with a review of arithmetic that gives you all the special short-cuts that save countless hours of your time. Then, step-by-step, you go into the higher mathematics and learn how simple it all can be when an expert explains it to you. *Every minute you spend on this course will pay you big dividends.*

**An Expert Gives You His Simplified Methods**

Mr. Thompson, the author of these books is not an ordinary teacher of mathematics. He presents each practical method and problem in the clearest and simplest way. He gets right down to the kind of information you need in your daily work.

### *Here are but a Few of the Hundreds of Subjects Explained in this Complete Self-study Course:*

**ARITHMETIC:** Starting with a quick review of principles, this book gives you the special calculation methods used in business and industry that are rarely given in ordinary arithmetic books. Above all else this volume shows you how to attain speed and accuracy with fractions and decimals, ratio and proportion, powers and roots, etc. Fundamentals in all computations in engineering and the essential methods for rapid calculation, such as is needed in setting lathes, etc., are made clear and simple. Important business subjects made easy in this book include bank interest, discount, income on securities, payment on mortgages, insurance plans, etc.

**ALGEBRA:** This book makes algebra a live interesting subject. The author starts with simple problems from everyday life that can be solved by arithmetic and algebraic methods. Among other subjects, this book shows you how to apply teaches you all about logarithms—the method of computation that engineers use to save time. It also shows you how to solve problems relating to machines, engines, ships, autos, planes, etc.

**GEOMETRY:** This book gives you the practical, common-sense method for solving all problems in both plane and solid geometry—problems ranging from the simplest distance problems to the geometry of spheres which has applications ranging all the way from the atom to the earth itself. Here you will find all the facts you need to deal with angles, triangles, circles, and the many other geometric figures that are basic to engineering design.

**TRIGONOMETRY:** Practically every problem in machine work, surveying, mechanics, astronomy and navigation is solved by methods of trigonometry, and this interesting volume makes the methods of solving them clear and easy. The great range of problems in this volume includes those arising in the work of the civil engineer, whether he is surveying land, laying out a road or railroad track or "leveling off" a lawn or tennis court.

**CALCULUS:** This branch of mathematics deals with rate problems and is essential in computation involving objects moving with varying rates of speed. It also enables us to find the most efficient design for any kind of mechanism, engine or moving vehicle. The practical application of calculus forms much of the foundation for our present world of engineering and mechanics. In each chapter, the author shows you step by step how to work out practical problems that occur in business and industry.

### Thousands of Jobs Are Waiting for Trained Men

INDUSTRY is working at top capacity to meet the needs of our gigantic industrial program. Trained mechanics and technicians are in urgent demand, and in practically ALL OF THESE JOBS a knowledge of mathematics is required.

Remember, mathematics is the foundation of all technical work. Give yourself this basic preparation now by this quick, convenient, inexpensive method.

### SEND NO MONEY

**Examine These Books for 10 Days FREE!**

Send no money now, not a penny! The coupon at right will bring you the complete course in book form for 10 days' trial. Unless you are convinced that it is exactly what you need and want you may return the books and owe nothing or you may keep them by sending us the small down payment of $1.85, balance in four monthly payments of $2.00 each. Take advantage of this opportunity to acquire a complete training in mathematics this simple, inexpensive way.

### MAIL THIS COUPON

D. Van Nostrand Company, Inc., 250 Fourth Ave., N. Y. 3

Send me MATHEMATICS FOR SELF STUDY in 5 volumes. Within 10 days I will either return the books or send you $1.85 as first payment and $2.00 per month for four months, until the total price of $9.85, plus a few cents postage, is paid.

*(If you send $9.85 with this coupon, we will pay the postage. Return privilege and refund guaranteed.)*

# Out of the Amazing WORLD OF TOMORROW

**THE MOST FASCINATING NOVELS EVER WRITTEN!**

## THE BOOK CLUB OF TOMORROW IS HERE TODAY!

IMAGINE—ANY THREE of these full-size, brand-new SCIENCE-FICTION books—a $7.50 to $9.00 value—yours for only $1.00 on this amazing offer!

The founding of this SCIENCE-FICTION BOOK CLUB is a recognition of the fact that Science-Fiction has won a place as an important *new kind* of literature. It has grown so fast it's hard to keep up with it! How is one to read the BEST new Science-Fiction books—without wasting time and money wading through good and bad alike?

**Now—The Cream of New Science-Fiction Books—For Only $1.00 Each!**

The SCIENCE-FICTION BOOK CLUB selects each month the *best new* Science-Fiction book. It brings you the brand-new full-length books FOR ONLY $1 EACH (plus a few cents shipping charges)—even though they cost $2.50 and up in publishers' editions!

Each selection is described IN ADVANCE, in the Club's free bulletin, "Things to Come." You take ONLY those books you want—as few as four a year. There are no other rules, no dues, no fees.

**SEND NO MONEY —JUST MAIL COUPON**

WE KNOW you will enjoy membership in this new kind of book club. To *PROVE* it, we are making this amazing offer! Your choice of ANY 3 of the new Science-Fiction masterpieces—at ONLY $1 FOR ALL THREE. Two are your gift books for joining: the other is your first selection. This liberal offer may have to be withdrawn at any time. So mail coupon RIGHT NOW to: **SCIENCE-FICTION BOOK CLUB, Dept. PS-2, Garden City, N. Y.**

**WHICH 3 DO YOU WANT FOR ONLY $1.00?**

**SCIENCE-FICTION BOOK CLUB**
**Dept. PS-2, Garden City, New York**

Please rush me the 3 books checked below, as my gift books and first selection. Bill me only $1 for all three (plus few cents shipping charges) and enroll me as a member of the Science-Fiction Book Club. Every month send me the Club's free bulletin, "Things to Come," so that I may decide whether or not I wish to receive the coming monthly selection described therein. For each book I accept, I will pay only $1 plus shipping. I do not have to take a book every month (only four during each year I am a member)—and I may resign at any time after accepting four selections.

**SPECIAL NO-RISK GUARANTEE:** If not delighted, I may return all books in 7 days, pay nothing and this membership will be cancelled!

# Picture YOURSELF

You've done it often. Call it daydreaming if you like, but you've seen yourself in a bigger job—giving orders and making decisions—driving off in a smart new car—buying your family a fine home.

There's nothing wrong with dreams. But how about making them come true? *You can do it this year*, if you're willing.

Look around you. The men who are going places are the *trained* men. They've learned special skills that bring them better jobs and higher pay. It's the men *without* training whose dreams flop.

What are you going to do about it? Just wait and wish for another year? If you really *want to succeed*, you can get the personalized training you need by studying at home in your spare time at your own pace. International Correspondence Schools offer you a course in just about any field you choose, giving you the practical plus the bedrock facts and theory. No skimming or skimping!

And you'll be earning while you learn without interfering with social life. Students report better jobs and more pay

**IT'S TIME TO TURN OVER A NEW LEAF! START NOW**

**Can I.C.S help you in '54?**

***Read What Others Say!***

*Enrolling with I. C. S. was one of the smartest things I ever did. The position as Plant Engineer I hold today is largely due to the "know-how" derived from my I. C. S. texts.*
L. P. S., ELKHART, IND.

Without the I. C. S. course in Machine Shop Inspection, I would have been unable to get my job at Bendix Aviation.
(*Miss*) H. B., HERKIMER, N. Y.

*I got the break over more experienced fellows because of my I. C. S. training.*
M. A. D., SUNCOCK, N. H.

Because of this advanced education at I. C. S., I am a much happier person and I believe a more intelligent and consequently a more interesting person.
(Mrs.) C. E. M., *Royal Oak, Mich.*

Thanks to I. C. S. training, my salary has been increased 204%.
N. E., *Bellingham, Wash.*

My company listed employees as college and non-college graduates. Now they list them as college graduates or equivalent and I am included in this group —thanks to my I.C.S. course in Civil Engineering.
W. J. L., Lake Jackson, Texas

The mention of my I. C. S. course alone opened a position for me.
A. R. P., South Gate, Calif.

*I.C.S. training qualified me for a position usually held by men older and more experienced.*
P. D. R., DURHAM, N. C.

**I. C. S., Scranton 9, Penna.**

***The new year brings new opportunities, new stumbling blocks. Will you be offered a better job? Will there be cutbacks? Now's the time to prepare—with I. C. S.***

# going places in 1954

within a few months. Graduates receive handsome diplomas.

Look over the list of subjects in the coupon. Pick out the one that interests you most—the one that holds the greatest future for you. Then mark the coupon and mail it today. *Find out* what I.C.S. can do for you in 1954. It costs only a stamp. But it's an important first-of-the-year step if you want to go places.

Picture yourself one year from today enjoying the regard of fellow employees and the rewards that come with success!

## You Can Build Your Own Tractor

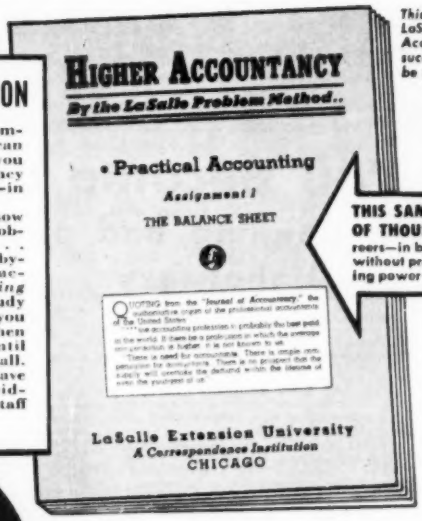
You can sit down to your yard chores with this husky midget tractor. No toy, it will pull a lawn roller, gang mower, spreader, stone cart or leaf sweeper. An automatic shift and a 1½-horsepower engine give it plenty of gumption. Using all new parts, you can build it for about $160. See how in the March POPULAR SCIENCE MONTHLY.

# This *FREE SAMPLE LESSON*

## *will prove you can become an expert*

# BOOKKEEPER . . . ACCOUNTANT OR C.P.A.

*This well-paid LaSalle-trained Accountant's success could be yours.*



**THIS SAME LESSON HAS STARTED HUNDREDS OF THOUSANDS** toward well-paid accounting careers—in business, government, and as C.P.A.'s. Even without previous knowledge, progress is rapid—earning power climbs fast. This sample lesson shows why.

## FREE SAMPLE LESSON

We offer you this free sample lesson so that you can *prove to yourself* that you CAN master Accountancy—quickly, thoroughly—in spare time at home.

You will see exactly how LaSalle's famous "Problem Method" works . . . how you are led step-by-step through actual accounting work—*learning by doing* and not by study of theory alone. First you tackle easy problems, then more difficult ones—until soon you master them all. And at every step you have the close personal guidance of LaSalle's large staff of C.P.A. instructors.

**Nearly 10% of all C.P.A.'s in the U. S. have been trained by the LaSalle Problem Method**

IF you have been envying the high incomes and good jobs enjoyed by thousands of men and women Accountants today . . . incomes ranging from $4,000 to $10,000 and more per year . . . why not launch such a career for yourself?

Do you doubt that you can?

Then let us send you—without cost or obligation—the same Lesson Number One with which LaSalle has started several hundred thousand men and women toward successful accounting careers. We want you to see for yourself how this remarkable method, originated by LaSalle, makes Accountancy simple, interesting, practical, and certain . . . how it leads you step-by-step to a complete mastery of Accounting—and on up to the coveted degree of Certified Public Accountant if you so aspire.

It doesn't matter whether you've had previous bookkeeping experience, or whether you don't know a debit from a credit. Whether you wish to qualify as an expert bookkeeper, advanced accountant, cost accountant, auditor, government accountant, income tax specialist, or public accountant . . . you'll find in LaSalle's Problem Method the exact plan to prepare you rapidly and inexpensively—in spare hours at home—without losing a day from your present job.

So right now, today . . . if you are an adult, employed, and earnestly ambitious for rapid advancement in this highest-paying of all professions . . . send your name and address on the coupon below. We'll send the free sample lesson—plus our 48-page book outlining today's career opportunities and how you can qualify for them. A coupon like this has started many thousands toward greater success. It can do the same for you. Mail it today!

## GOOD-PAY JOBS IN 5 BIG FIELDS

If you were an expert accountant right now, chances are you would find yourself among the highest-paid of all professional men and women. Surveys show that accountants earn more than those in other major professions.

There are five big fields of opportunity open to Accountancy-trained men and women . . . opportunities that are wide open and highly inviting, offering maximum income and job security in good times or bad. And under LaSalle's "Problem Method" you can start earning while still learning—either in spare-time or full-time employment . . . or in business for yourself with no capital required.

Get the latest information by sending for our 48-page book, "Accountancy, the Profession That Pays" . . . plus free sample lesson. The coupon at right will bring both to you without cost or obligation. LaSalle Extension, 417 S. Dearborn St., Chicago 5, Ill.

**Clip Coupon . . . Mail TODAY!**

**LaSalle Extension University . . . A Correspondence Institution**
**Dept. 283H, 417 S. Dearborn Street, Chicago 5, Illinois**

YES, I want to see how LaSalle's "Problem Method" works.. how I can qualify for higa-pay Accountancy positions. Send Free Sample Lesson — also your 48-page book, "Accountancy, the Profession That Pays" ...all without cost or obligation.

## We'll train & establish you in

# Your Own Business

## . . . even if now employed

We are enlarging this 24-year-old world-wide chain of Duraclean dealerships. Many excellent locations are still available in the U.S.A., Canada, and other countries. If you are reliable and diligent, this is an opportunity to increase your income . . . and have the freedom, financial independence, and prestige of YOUR OWN business.

These are full time dealerships . . . but you can start in spare time and have a profitable, lifetime business when your present job ends. A Duraclean dealer will train and assist you. He'll reveal his successful, proven methods and sales plans. He'll **work with you.**

Alert dealers can average $5 hourly gross profit on service they render plus $3 on EACH service-man at National Price Guide charges. This business is **easy** to learn . . . quickly established.

*24 Years of Proven Success*

# You Become an Expert

## in cleaning and protecting Rugs and Upholstery

**DURACLEAN** cleans by *absorption*. It eliminates scrubbing . . soaking . . shrinkage. Aerated foam, created by electric Foamovator, restores the natural lubrication of wool and other animal fibers in rugs and upholstery. Dirt, grease and many unsightly spots vanish. Fabrics and floor coverings are cleaned with *a new consideration for their life and beauty.*

This modern process avoids strong soaps and machine scrubbing! This eliminates unnecessary wear and the breaking of fibers. Fabric life is increased.

**DURACLEANING** is done *in the home.* Customers like this convenience. Fabrics dry in a few hours. Rug pile again stands erect and even. Brilliant colors revive. Furnishings become clean, fresh and enlivened.

**DURAPROOF** is another year 'round service rendered in the home, office or institution—*without removing furnishings.* It protects upholstery, rugs, furs, clothing and auto interiors against damage by moths and carpet beetles. U. S. Government says **"Moths are present in practically every household . . No section of country seems free from such infestations." DURAPROOF** kills moths and carpet beetles . . it makes materials non-eatable to both. **DURAPROOF** in the ONLY moth-proof service backed by an International Money Back, 4-Year Warranty.

# Easy to Learn • No Overhead Expense

### *Permanent, Growing Market*

Service is rendered **IN** homes, offices, hotels, theaters, institutions and to revive used-car upholstery for auto dealers. There is need for these services in almost every building. Duraclean dealers operate from their home, an office or shop, as they prefer. It's **easy to learn** . . . we quickly train you. Rendering service yourself, at first, prepares you to train and supervise service men.

### *Repeat and Voluntary Orders*

**Demonstrations win new customers.**

**DURACLEAN** Dealers find REPEAT and VOLUNTARY orders a major source of income. Customers, enthused with results, tell friends and neighbors. Furniture and department stores and others turn over rug and upholstery cleaning and mothproofing to **DURACLEAN** Dealers. We show you **27 ways** to get new customers.

### *Two-Way Profit*

**You enjoy big profits** on BOTH materials and labor—after paying service men and salesmen. This is a year-round large-profit business. You have the cooperation of a **24 YEAR OLD** organization interested in your success. If you want to become the owner of a **DURACLEAN** Service business, you should inquire now, TODAY, while territory is still available.

## What Dealers Say

W. Lookiebill: We've had 20 years of pleasant dealings. I'm 65 but am setting my sights for 20 more years.
**Gerald Merriman: $700 cleaning . . only 13 working days.**
P. D. Freidinger: 70% of our business is repeat.
**A. Ullman: Every demonstration has been a sale.**
Ellsworth: Your advertising certainly has paid dividends.
**M. Lassanske: My original investment was returned in about two months. I am not sorry in any way that I started my business 'on a shoe string.'**
R. Kimbrough: Finished First White House of Confederacy and am to **Duraclean** the Governor's Mansion.
**Margarette Turner: Took in $106 in 15 or 18 hours.**

## Our 40th Year

**NRI training is thorough, practical, up-to-date. When you enroll with NRI you benefit from our 40 years of successful experience training men at home.**

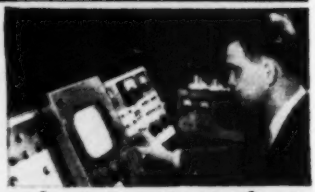
J. E. Smith

President
National Radio Institute
Washington, D. C.

# I'll Train You RADIO-

## You Practice Broadcasting with Parts I Send

As part of my Communications Course I send you parts to build low-power Broadcasting Transmitter at left, and other equipment. Use it to get practical experience. You put this station "on the air," perform procedures demanded of station operators. An FCC Commercial Operator's License can be your ticket to a bright future. My Course trains you to get your license. Mail Coupon now!



## Television Is Today's Good Job Maker

Television now reaches from coast-to-coast. More than 25 million Television sets are already in use and require servicing; thousands more sets are being sold every week. About 200 TV stations are now on the air with hundreds more being built. This means new jobs, more jobs, better pay for trained men. The time to act is NOW! Start learning Radio-Television servicing or communications.

## You Practice Servicing with Parts I Send

Nothing takes the place of PRACTICAL EXPERIENCE. NRI training is based on LEARNING BY DOING. You use parts I send to build many circuits common to Radio and TV. You build the modern radio at right. Use Multitester you build to make money fixing sets. Many students make $10, $15 a week extra fixing neighbors' sets in spare time, starting soon after enrolling. All equipment I send is yours to keep.

## Make Extra Money in Spare Time While Learning

Keep your job while training. Many NRI students make $10, $15 and more a week extra fixing neighbors' Radios in spare time. The day you enroll I start sending you special booklets that show you how to service sets. Multitester you build helps discover and correct Radio troubles, gives PRACTICAL EXPERIENCE on circuits common to radio and TV. Mail coupon today.

## I Trained these Men at Home

**Laborer Finds Success in Radio-TV**

"I was a laborer with no future. Now I have a position that pays well. My spare time servicing pays good money, too. Thanks to NRI."—Robert Ford, Johnstown, Pa.

**Switched to TV Servicing**

"I recently switched from studio work and am now holding a position as TV service technician. Enjoy my work more and more." —Norman Ward, Ridgefield Park, N. J.

**Paid for Course, Car in Spare Time**

"By the time I graduated I had paid for my course, a car and testing equipment. I can handle any job in Radio-TV."—E. J. Streitenberger, New Boston, Ohio.

**$10 to $15 Week Spare Time**

"Four months after enrolling, was able to service Radios . . . averaged $10 to $15 a week spare time. Now have full time business." — W. Weyde, Brooklyn, N. Y.

**Employed as Transmitter Operator**

"A former employer recommended NRI training to me. Now employed as transmitter operator in Harrisburg."—Albert Herr, New Cumberland, Penna.

# AT HOME for Good Jobs in TELEVISION

## There is Success-Good Pay-Security for You in America's Fast Growing Industry

### NRI Training Leads to These Jobs in RADIO-TELEVISION

**BROADCASTING**
Chief Technician
Chief Operator
Power Monitor
Recording Operator

**SERVICING**
Home and Auto Radios
Television Receivers
P.A. Systems

**MANUFACTURING**
Design Technician
Service Manager
Tester
Research Assistant

**SHIP AND HARBOR RADIO**
Chief Operator
Radiotelephone Operator
Assistant Operator

**GOVERNMENT RADIO**
Operator in Army, Navy, Marine Corps
Airways Operator
Forestry Dispatcher

**AVIATION RADIO**
Transmitter Technician
Airport Transmitter Operator

**TELEVISION**
Pick-up Operator
Television Technician
Remote Control Operator
Service and Maintenance Technician

**POLICE RADIO**
Transmitter Operator
Receiver Serviceman

DO YOU want good pay, a job with a bright future, security? Would you like to have a profitable business of your own? If so, find out how you can realize your ambition in the fast-growing RADIO-TELEVISION industry. Even without Television, the industry is bigger than ever before. Just think, over 115 million home and auto Radios, 3000 Radio Broadcasting Stations, plus 25 million Television sets and about 200 Television Broadcasting Stations. Expanding use of Aviation and Police Radio, Micro-wave Relay, Two-way Radio for busses, taxis etc., are making opportunities for Servicing and Communications technicians and FCC Licensed Operators.

### My Training Includes Television

You get practical experience by working on circuits common to both Radio and Television. My graduates are filling jobs, making good money in both Radio and Television. Many NRI trained men start their own Radio and Television servicing business with capital earned in spare time. Let me show you how you can be your own boss; earn $10 to $15 a week extra even while still learning. Now is the time to get ready for success in Radio-Television. Coupon below brings you Actual Lesson and 64-page book.

### Find Out What Radio-Television Offers You

What will YOU be doing one year from today? Decide now that you are going to know more and earn more. ACT NOW. Send the coupon below NOW for my FREE DOUBLE OFFER. You get Actual Servicing Lesson. Also my 64-page Book, "How to Be a Success in Radio-Television." Read what my graduates are doing, earning, see equipment you practice with at home. Mail coupon now. Send in envelope or paste on postal. J. E. SMITH, President, Dept. 4BB National Radio Institute, Washington 9, D. C. Our 40th Year.

### Actual Lesson and 64-page Book BOTH FREE

Control Operator, Station WEAN

"Received my License and worked on ships. Now with Station WEAN. NRI Course is as complete as any radio course can be." —Raymond E. Arnold, Rumford, L. I.

**Available to VETERANS under G.I. Bills**

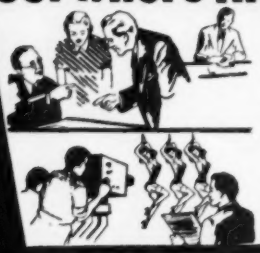
# Get where the BIG MONEY is!



The thousands of newspaper and magazine ads you read . . . the television and radio commercials you hear . . . the mail order ads you receive . . . the billboards you see . . .

All of this, and lots more from catalogs and advertising folders to house organs, DOESN'T GROW ON TREES! It's prepared by advertising men and women who are among the highest paid groups in the world. From Hollywood to New York . . . in cities and in towns . . . there are glowing opportunities almost everywhere!

# Learn ADVERTISING!

TELEVISION! RADIO! MAIL ORDER! MAGAZINE! NEWSPAPER! INDUSTRIAL! DIRECT MAIL! NOVELTY! POSTERS! etc.

## NOW! TRAIN AT HOME FOR THIS FASCINATING, WELL PAID WORK!

Maybe you've thought of a career in advertising as something beyond your reach. But it isn't!

Here, in one giant, 842-page book is just the help you need!

PRACTICAL ADVERTISING is written to be studied at home. It guides you through every step of this fascinating work. From magazine to newspaper ads; from mail order to television; from market research to space and time buying; from writing ads to making layouts, artwork and photography and literally hundreds of other subjects—even to writing jingles—everything is clearly explained.

Hundreds of people now in big pay advertising jobs got their basic training from this book. Thousands of copies are used in leading schools and colleges and for home study.

Never before has modern advertising been explained so simply and fully. The author, a well-known advertising agency president, put everything into PRACTICAL ADVERTISING he himself would expect a job applicant to know . . . **and lots more besides.**

It is specifically written for beginners. No previous advertising training is needed. It guides you step by step. Vast opportunities are pointed out and you learn how to start cashing in on them—whether with an ad agency, an art or photo studio, in the ad department of a business or the place you now work, or as a free lance or spare-time ad expert.

### LIKE TO WRITE?

Many ad writers make $10,000 to $25,000 and more a year! "Fine" writing isn't needed. It's down-to-earth "selling" copy that counts. This book shows you **both** how to write it and judge it!

### LIKE TO DRAW?

You don't need to be able to draw "art exhibit pictures" to be a whiz at ad layout. There's a big place in advertising for those with art and photo talents—and this book teaches you the work step by step.

Ideas pay off big in advertising — and here you learn how to produce them as well as "cash in" on them.

Other big opportunities exist in ad research for those good at figures . . . in selling for those who like to sell . . . in TV or radio programming for those who know music and dramatics . . . and so on down a long list.

## EXTRA! 72-PAGE TELEVISION SUPPLEMENT AND PRACTICE BOOK NOW INCLUDED

From first page to last, PRACTICAL ADVERTISING can open your eyes to unsuspected opportunities where your head can earn you lots more than your hands ever could!

IN ADDITION, you also get the new 72-page TELEVISION SUPPLEMENT AND AD WORKBOOK. You learn how TV commercials and programs are out "on the air" from "storyboard" to screen. Included are sample scripts, program ratings, and full data on such things as scenic effects, dramatic action, eye catchers, etc.

Together, the two books bring you 914 pages of the finest advertising training available. You get them both for the special price of only $6.95 (regular price $7.75). 537 illustrations explain things simply as A-B-C. 690 self-test questions help you analyze your progress. 110 interesting assignments get you started on typical ad work with the very first chapter!

Use coupon for 10-DAY FREE TRIAL. Send to Rinehart Books, Inc., 232 Madison Ave., New York 16, N. Y. You be the judge!

### IT'S ALL HERE!

Nothing is omitted or condensed. Following are a few of the subjects covered:

Opportunities in advertising; How ads build business; Best advertising appeals; How to write ads; Slogans; Jingles; Artwork and Photos; Layouts; Tricks of the trade; Getting ads ready to print; Plates; Electros; Mats; Printing and how to buy it; Getting free publicity; A course in mail order; Buying space and time; Research and testing; House organs; Catalogs and other advertising literature; Sales letters; Trademarks and brand names; Planning campaigns; How agencies operate; Advertising jobs and how to get them. . . . **and literally hundreds of others.**

**Send No Money!**
**PRACTICE 10 DAYS FREE!**

**Rinehart Books, Inc., Technical Div.,**
**232 Madison Ave.,**
**New York 16, N. Y.**

Sure! Send the 842-page PRACTICAL ADVERTISING training book PLUS the 72-page TELEVISION SUPPLEMENT and WORKBOOK for 10-day Free examination. In 10 days I will remit the complete purchase price of $6.95 (plus a few cents postage) or return books to you postpaid and owe you nothing.

## An Amazing Invention—"Magic Art Reproducer"

# DRAW ANY PERSON IN ONE MINUTE

**Anyone can Draw With This Amazing New Invention—Instantly!**

**NO LESSONS! NO TALENT!**

**You Can Draw Your Family, Friends, Anything From REAL LIFE—Like An Artist... Even if You CAN'T DRAW A Straight Line!**

**De Luxe Model Complete for only $1.98**

—With extra high power, extra clear and sharp "reproducer" unit.

**A New Hobby Gives You A Brand New Interest!**

Yes, anyone from 5 to 80 can draw or sketch or paint anything now... the very first time you use the "Magic Art Reproducer" like a professional artist—no matter how "hopeless" you think you are! An unlimited variety and amount of drawings can be made. Art is admired and respected by everyone. Most hobbies are expensive, but drawing costs very little, just some inexpensive paper, pencils, crayons, or paint. No costly upkeep, nothing to wear out, no parts to replace. It automatically reproduces anything you want to draw on any sheet of paper. Then easily and quickly follow the lines of the "picture image" with your pencil ... and you have an accurate original drawing that anyone would think an artist had done. No guesswork, no judging sizes and shapes! Reproduces black and white and actual colors for paintings.

**Also makes drawing larger or smaller as you wish.**

Anyone can use it on any desk, table, board, etc.—indoors or outdoors! Light and compact to be taken wherever you wish. No other lessons or practice or talent needed! You'll be proud to frame your original drawings for a more distinctive touch to your home. Give them to friends as gifts that are "different," appreciated.

**Have fun! Be popular!** Everyone will ask you to draw them. You'll be in demand! After a short time, you may find you can draw well without the "Magic Art Reproducer" because you have developed a "knack" and feeling artists have—which may lead to a good paying art career.

**ALSO EXCELLENT FOR EVERY OTHER TYPE OF DRAWING AND HOBBY!**

Create Your Own Design for All Hobbies! Reproduce on anything.

Copy all cartoons, comics.

Outdoor Scenes, landscapes, buildings

Copy photos, portraits of family, friends, etc.

Still life, vases, bowls of fruit, lamps, furniture, all objects.

Copy blueprints, plans.

# INVENTORS

Learn how to protect your invention. The U. S. Patent Laws provide that any new and useful art, machine, article of manufacture, or composition of matter, or any new and useful improvement thereof, may be patented if the act of invention is involved. Therefore, every inventor with a valuable invention should take advantage of the Patent Laws and proceed for patent protection in order to safeguard his rights.

A patent gives the inventor the exclusive right to prevent others from making, using, or selling the invention claimed in the patent for a period of seventeen years.

The Patent Laws were enacted for the benefit of the inventor to give him protection for the features of his invention which are patentable. These features must be properly and concisely set forth and claimed in a formal application for patent, in order to comply with the requirements of the Patent Laws. For that reason, unless the inventor is familiar with patent matters, he should engage a competent registered patent attorney or agent to represent him. We are registered to practice before the U. S. Patent Office and are prepared to serve you in the handling of your patent matters.

A specially prepared booklet entitled "Patent Guide for the Inventor", containing detailed information with respect to patent protection and procedure, together with a "Record of Invention" form will be promptly forwarded to you without obligation upon request.

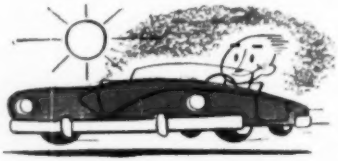
### What Makes a Car Safe?

For years I've wanted to own a convertible. But whenever I mention the old yearning to my family or a plain-spoken friend, I hear the ancient wail: "They're death traps. You haven't got a chance if you should roll over in one."

Well, maybe I haven't. But what's the likelihood of a convertible's rolling over, these days? The center of gravity in cars has been getting lower for years. I suspect that



one of these new, ground-hugging open jobs is almost as hard to overturn as a tank.

Who's to say how much safer I'd be in a sedan or a station wagon or even a hard-top convertible? Has anybody ever measured how much safer one body style is than another?

THEODORE DEWARE, Brooklyn, N.Y.

*There's a touch of the convertible-lover in all of us, so we handed on your questions to the National Safety Council, the Automobile Manufacturers Association, three big state police departments and several leading insurance companies. And what do you know? Nobody could answer them.*

*Cornell University's crash-injury research program may provide some answers for you in about a year.*

*In the meantime, drive carefully, and you won't roll over in anything.*

### Reading Backwards Makes Sense

Ralph C. Finn's letter entitled "Who's Nuts?" [Nov., p. 16] shows that *he* isn't.

Most intelligent, deep-thinking men look

# INVENTORS

If you believe that you have an invention, you should find out how to protect it. The first step is to have a search made of the prior pertinent U. S. patents. If a report on this search indicates that the invention appears patentable you can apply for a patent, and the specifications and claims should be prepared.

The firm of McMorrow, Berman & Davidson, with offices in Washington, D. C., is qualified to take the necessary steps for you. We can make a preliminary search on your invention, advise you whether we think it can be patented, and prepare your application for patent.

Unless you are fully familiar with the U. S. Patent Laws, we recommend that you engage the services of a Registered Patent Attorney to protect your interests. The patent laws are *your* laws. A patent gives you the right to prevent others from making, using or selling the invention claimed in your patent for a period of 17 years.

Use these patent laws for your protection. Investigate whether your invention can be patented. If you have what you believe to be an invention, we suggest that you have this firm make a search for you.

*Send for a copy of our Patent Booklet entitled "How To Protect Your Invention," containing information about patent protection and patent procedure. Along with this we will also send you an "Invention Record" form, for your use in writing down and sketching details of your invention. We will mail them promptly. No obligation. They are yours for the asking.*

# Amazing German Invention 'DISSOLVES' BEARDS Like Magic!

**Conditions old or new blades to velvety smoothness**

## Prove it yourself with the 50-50 test!

Here's great news for you fellows with tender skins! NOW shaving need not be a gruesome, painful task! This new marvel of German ingenuity helps prevent skin smarting and burning, nicks and scratches. Even tough beards seem to melt away. It's FUN to shave this HONIKRON way . . . your safety razor glides through the bristles—almost without effort! Best of all, you feel practically no pull, no scraping, no sensation of pain. It's unbelievable! You'll be feeling your skin . . . wondering whether the blade has actually given you this smooth, comfortable shave! You'll be astonished to discover that the stubble is all gone—that your skin feels like velvet! ALL THIS, too, in far less time than with old-fashioned shaving methods! (And your face FEELS GREAT, Mister!)

### 30 DAY FREE TRIAL

Make the 50-50 test in your own home at OUR risk! Shave half your face the old way. Use the HONIKRON way on the other half. SEE and FEEL the difference! DON'T THROW OUT THE OLD BLADE . . . use it over and over for 30 DAYS on one side of your face. Give it the HONIKRON treatment! Use NEW blades for the other side. THEN YOU BE THE JUDGE! See if the HONIKRON-CONDITIONED blade doesn't give you FASTER, SMOOTHER, CLOSER luxury shaves DAY AFTER DAY—right up to the 30th day—yes, better in every way than with the new blades!

### NOW GET 30 TO 365 VELVET SHAVES FROM 1 BLADE!

HONIKRON soon pays for itself. 64 miniature abrasors hone and condition ANY double-edge blade—old or new—in a few seconds! It sharpens & smoothes BOTH sides, BOTH edges—all at once! And remember—whether your blade is old or brand new, by conditioning it the HONIKRON way you get smoother, better edges for closer, more velvety shaves—IN FAR LESS TIME! New blades often have a metallic fuzz that grinds into your skin; HONIKRON-ing removes this fuzz. Ever notice how one blade shaves better than another from the same pack? Don't blame your skin! Fast mass-production methods may cause variances you cannot SEE—but you can FEEL them! HONIKRON EQUALIZES and "barber-sharpens" ALL edges on any blade, new or used, giving you smooth shaving EVERY time.

### SAVE MONEY!

HONIKRON costs only $1.98—saves you many, many times its low original cost. It is so new, so sensational that many find it hard to believe in its super-efficiency. That's exactly why we want to send you one on a 30 DAY TRIAL. IT MUST give you the 30 best shaves of your life . . . it MUST thrill you in every way . . . it MUST save you time and money or your 1.98 comes back to you—no questions asked! Quantity limited. Please RUSH coupon today!

Here for the first time—Germany's famed SPEKTOSCOPES — a revolutionary concept in binoculars. Wear them like ordinary eye-glasses—hour after hour—without fatigue. Feather-weight—only 1 oz. You'll hardly FEEL them! Yet here is a new, truly powerful optical design that gives you greater range than many expensive opera or field glasses and a far greater field of view than some selling for many times more! Has INDIVIDUAL eye focusing for clear, sharp viewing whether you're looking at a play in the first row or a seashore scene miles away! SPEKTOSCOPES are ideal for indoors, outdoors or distant scenes or close-up viewing. Special low price—$1.98, a saving of $8.00 or more!

***Try at Our Risk — No Obligation!***

Enjoy at our risk for 5 days. You must be delighted! Otherwise, your $1.98 will be refunded with no questions asked! Limited supply forces us to place a limit of 2 per customer. Send check or m.o. for prompt, free delivery. COD's sent plus postage. Use convenient coupon below!

FAVORABLE EXCHANGE RATE MAKES THIS VALUE POSSIBLE! This is the first time this type of optical instrument has ever sold for less than $10.00. The favorable rate of exchange and Germany's need for dollars make it possible. We're the exclusive distributors of SPEKTOSCOPES in the U.S.A. Order today!

# NEW MIRACLE FORMULA!

## Repairs 1,001 Broken Articles—Stops All Leaks In 1 Minute!

***Works Instantly!***

**The "Handyman in a Tube"**

Save treasured chinaware and dishes by mending with Bondpruf!

Leaky plumbing fixtures are no problem at all when you have Bondpruf handy.

You can even use Bondpruf to help insulate motor connections.

**GIANT SIZE TUBE**

**$1**

## Giant Size Tube Gives You Year 'Round Supply For Hundreds of Home Repairs!

- **Waterproofs!**
- **Repairs Tools!**
- **Mends China!**
- **Caulks Windows!**
- **Insulates!**
- **No Soldering!**
- **No Welding!**
- **Permanent!**

# TRY A TUBE AT OUR RISK!

Apply Bondpruf to window frames for preventing drafts; keep rooms warmer!

TV and radio wires often split and fray—you can avoid accidents by mending with Bondpruf!

Broken chairs and pieces of furniture are easily mended with this "miracle liquid"!

Book bindings, covers and pages can be repaired permanently with a quick application of Bondpruf!

The BONDPRUF formula is a triumph of modern science, representing years of painstaking research and experimentation. The result is one of the most amazing products of the 20th century—the wonder fluid that performs 1001 tasks with amazing ease and efficiency—in the home, farm, factory! Bondpruf actually does the work of six or seven other products—in many cases quicker, easier, better by far! BONDPRUF MENDS, REPAIRS, INSULATES, WATERPROOFS, CAULKS, CEMENTS, STOPS LEAKS. With every passing day more and more uses are being discovered for it! It is truly a boon for every man, woman or child.

### WATERPROOF ANYTHING!

Use BONDPRUF to waterproof shoes, galoshes, traveling bags, trunks, all containers, auto ignition systems, outdoor iron or natural wood furniture, cellar floors or walls, boats, etc., etc.

### MENDS! REPAIRS! CEMENTS

Forget all about old glues and cements! BONDPRUF does a near-miracle job of mending, repairing, holding together any and all materials such as metals, glass, wood, china, porcelain, leather, rubber, plastics, nylon, silcloth, fabrics, rock, cardboard, etc. Eliminates much tackling, nailing, welding, soldering! Repairs cracked dishes, broken toys, kitchen utensils, jewelry, antiques, metal housings. BONDPRUF creates a permanent, transparent seal that's virtually invisible, not affected by sun, water, oil, gasoline, alcohol, etc.

### BONDPRUF IS AN EXCELLENT INSULATOR

Apply to electric plugs, exposed wires, all connections, spark plugs, screwdrivers, windows, etc.

### STOPS LEAKS QUICK!

BONDPRUF stops leaks in pipes, containers, boats, gasoline tanks & lines, carburetor floats, car radiators, gas and water pipes, etc., quickly, efficiently! No soldering, no welding needed! Remember, water, gas, oil, alcohol do not affect it! Imagine the money you save on such repairs!

### YOU CAN CAULK WITH BONDPRUF!

Ideal for window sills, storm sash, car windshields, camera bellows, nooks and corners. It adheres perfectly, too, and keeps out the wintry blasts!

Imagine sealing off gas line or tank leaks QUICK and WITHOUT taking out gasoline! Stop oil leaks, too, in the rear axle, all oil lines, brake drums and cylinders! Eliminate leaks in the car radiator, gaskets, transmission housing, roof or body. Remember! Bondpruf holds even metals together! WATERPROOF vital motor parts, help prevent shorts in wiring!

### USE IN OFFICE, SHOP, GARDEN

Hundreds of uses around the office: Typewriters, files, chairs, business machines, etc. For the SHOP it saves money constantly, repairing almost everything. Ideal for attaching small parts, fabrics, metals, etc. Repairs many GARDEN implements, water hose, sprinkler joints, garden tools, outdoor furniture, etc., etc.

### FREE! SILICONE CLOTH!

**Now yours at no extra cost—this regular $1.00 SILICONE CLOTH—on all orders for 3 dollar tubes of BONDPRUF at the reduced price of only 1.98. Use it to polish your furniture, refrigerator, bathtile or car. Treated with expensive, wonder-working silicone that makes even old furniture or autos glisten with new sheen. Gives weeks of protection! This cloth is yours to keep even if you return BONDPRUF for a refund! SAVE MORE! — GET MORE!—A $4.00 value for only 1.98. Don't miss this great value! Rush coupon now!**

### A $1 TUBE CAN SAVE YOU $100

Bondpruf performs wonders every day in the home, shop, factory, farm. Saves money and frustration, too! Do not confuse with old-fashioned glues or adhesives! Bondpruf is NEW, does more, quicker, more efficiently! You'll wonder how you ever got along without it. One repair, one waterproofing job, just one leak stopped, may save you many times its low price! Imagine the convenience, too!

### TRY IT AT OUR RISK

Take 5 days—repair, insulate, waterproof, caulk, stop leaks to your heart's content. If you don't agree this is just about the most amazing product of its kind you've ever tried, your dollar comes right back on your say-so! Send only $1.00 for a long-lasting tube or $1.98 for 3, fully postpaid. C.O.D.'s sent plus postage. Use convenient coupon NOW! You may need it tomorrow! NOTE: On orders for 3 you save $1.02 and receive the Silicone Cloth at no extra cost—yours to keep even if you return the tube! Act now!

at a magazine from the back to the front. And before we get too many scoffs from the distaff side, let's look at the facts ("Just the facts, Ma'am").

It is well known that women outlive men, and the reason given by one author is that we wear ourselves out running

around waiting on them, while they stand around conserving their energy and consequently outlive us.

If we men are to survive, we must also start conserving our energy. So, why spend so much of it turning pages from right to left, moving the left thumb each time to hold that page while we reach back for another? Right to left, right to left, goes that good right arm when we are supposed to be sitting relaxed with a good magazine. Might as well be out seeding the lawn. The effort spent is the same.

Now, consider the smart method of letting the pages slip off the left thumb one by one and seeing them turn *themselves*.

When we find something interesting, what's the hurry? As another page or two float by effortlessly, we soon find out how it all starts!

Good thinking, Ralph! It may be the height of laziness, but it's good self-preservation.

E. A. Geoffroy, South Bend, Ind.

**Convincing Talk**

I can well see how your magazine is so popular, because when you talk about something you do the job up right.

Ralph H. Kress, General Manager
Dart Truck Co., Kansas City, Mo.

**How "Lightning" Cracks Nuts**

As a loyal subscriber of long standing, I have read many articles in your magazine that bordered on the incredible, but your story about the man-made lightning bolt that cracks nuts [Nov., p. 157], I believe, goes over the border.

A rapid calculation shows that 5,000 amperes at 65,000 volts is equal to 325,000

# How I foxed the Navy

***by Arthur Godfrey***

The Navy almost scuttled me. I shudder to think of it. My crazy career could have ended right there. Who knows, I might still be bumming Chesterfields instead of selling them.

To be scuttled by the Navy you've either got to do something wrong or neglect to do something right. They've got you both ways. For my part, I neglected to finish high school.

Ordinarily, a man can get along without a high school diploma. Plenty of men have. But not in the Navy. At least not in the U. S. Navy Materiel School at Bellevue, D. C., back in 1929. In those days a bluejacket had to have a mind like Einstein's. And I didn't.

"Godfrey," said the lieutenant a few days after I'd checked in, "either you learn mathematics and learn it *fast* or out you go. I'll give you six weeks." This, I figured, was it. For a guy who had to take off his shoes to count above ten, it was an impossible assignment.

I was ready to turn in my bell-bottoms. But an ad in a magazine stopped me. Here, it said, is your chance to get special training in almost any subject—mathematics included. I hopped on it. Within a week I was enrolled with the International Correspondence Schools studying algebra, geometry and trig for all I was worth.

Came week-end liberty, I studied. Came a holiday, I studied. Came the end of the six weeks, I was top man in the class. Within six weeks I had mastered two years of high school math, thanks to the training I'd gotten.

I.C.S. made the impossible—easy!

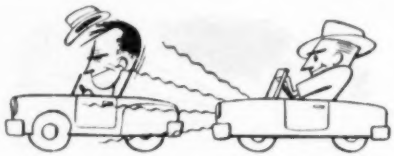
kilowatts, enough to make Grand Coulee pause for reflection. At the nominal sum of three cents per kilowatt, the power bill for cracking walnuts would be $9,750 per machine per hour, or $1,404,000 for the 18 machines for an eight-hour day!

CHARLES STEIN, Beverly Hills, Calif.

*Perhaps we didn't make it sufficiently clear that the 5,000-ampere, 65,000-volt current is not continuous. It comes in flashes lasting only 50 millionths of a second each. The entire plant is fed by a modest, 60-horsepower motor-generator set, and the actual operating cost of the "lightning" walnut cracker is 55 cents an hour.*

**How to Shame Hornblowers**

Far too many drivers are emulating Gabriel over these fair United States. I seem to recollect the occasional appearance of a



slogan "Use your brakes, not your horn." I propose a compromise.

Why not have a horn that can be operated only when the driver is preparing to meet a hazardous traffic condition or other emergency? This can be done by connecting the existing stop-light switch in series with the battery and horn. The other horn wire would go to ground via the existing method of operation.

Of course, this item would have to be supervised by state inspectors to prevent eager Casey Joneses at the throttles from bypassing the switch, but conspicuous hornblowers would give themselves away anyhow if they tried this dodge, for their stop lights wouldn't show.

FRANK H. FRY, Philadelphia.

**Good for Three Hard Stops**

In your article on the 1954 Chrysler [Nov., p. 99] you stated that Chrysler has decided to retain the standard brake pedal in its power braking system because, should the engine stall on a downgrade, the wheels wouldn't turn the engine fast enough through the torque converter to develop enough vacuum to work the power system. I was under the impression that power

braking systems have vacuum reservoirs which make it possible to apply the power brakes several times after the engine has been shut off.

EDWIN G. SOLOV, Flushing, N. Y.

*Most power braking systems do have a vacuum reservoir. It is good for about three hard stops. Chrysler intends its high pedal to guard against a complete failure of the system, bearing in mind the possible results of such failure on a long hill or in mountainous country.*

**Minority Report**

The Denver traffic-control scheme that's written up so fulsomely in your September issue is fine in theory. But in practice, Denver's traffic problems are now more confusing to pedestrians and drivers alike than they ever were.

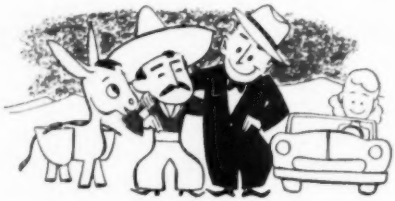
CECIL COX, Denver.

*According to the* Denver Post, *80 percent of the people highly approve of "the Barnes dance" and other innovations of traffic engineer Henry Barnes. And the death rate in auto accidents has been cut by more than half since he started untangling the city's vehicular snarl.*

**More Backing for Road to Panama**

Your article on "The Wonderful Road We Never Finished" [Jan., p. 97] points up a situation that is of great importance to the nations of Central and South America, as well as to our own country.

The Inter-American Highway, by facilitating inter-American travel and communication, should further friendly relations



between the nations of the Americas. It should also demonstrate to the nations of Central and South America the part that an adequate transportation system can play in developing their natural resources.

Development of any country's natural re-

**Are you an "Ideal" male?**

What do women say about men privately? 100 models—real "pin-up" girls, gave the answer. To be an "Ideal Male," they said, demands the qualities below. If you have them *all* your score is 100:

**SCORE YOURSELF**

| | |
|---|---|
| — *A "he-man"—but not a "cave-man"* | (20 points) |
| — *Ambitious—but not a grind* | (20 points) |
| — *Sociable—good talker and mixer* | (15 points) |
| — *Good looking—but not too handsome* | (20 points) |
| — *Most important, well-groomed hair kept neat without messy goo** | (25 points) |

***Amazing new "no grease" discovery keeps hair neater than gooey oils, creams—keeps hair and scalp cleaner, too!**

To "up" your score as an "Ideal" Male use Fitch Ideal—the hair tonic that helps keep hair good-looking, neat all day...*cleaner*, too! Not sticky or creamy, it won't trap dirt to clog scalp pores. And its tonic action relieves itching, acts to keep scalp free of flaky dandruff.

At drug counters. And ask Barbers for professional applications.

**FITCH Ideal® HAIR TONIC**

sources and the attainment of a higher standard of living for its people are dependent to a large degree upon the improvement of their transportation facilities.

Means to move raw materials to production centers will materially assist in building up production facilities, and efficient production, either industrial or agricultural, will need practical means of getting the product to market. A nation's transportation system can help greatly its economic development.

The Inter-American Highway should show the need for additional roads in these countries, and encourage the development of other means of transportation necessary to their growth.

NICHOLAS KELLEY, JR., Secretary
Chrysler Corp., Detroit.

### Too Fast to Be True

In your article "World's Greatest Speedboat" [Oct., p. 104] you state that *Slo-mo-shun IV* holds the world's straightaway speed record. That's fine and dandy, but you also said that the record speed was 187.6 m.p.h. The 1953 *Information Please Almanac* says the speed is 178.497 m.p.h. Is the *Almanac* wrong?

CHARLES WHITAKER, Melvindale, Mich.

*No, we were.*

### Fastest Clipper Ship

I have in front of me the issue of PSM for December, in which an article by Winthrop Pratt Jr. appears. It is entitled, "How to Build the World's Fastest Clipper Ship."

I take it that Mr. Pratt has never heard of the *Cutty Sark*, so here is a little general information about her: Built by Scott & Linton, Dumbarton, Scotland, in 1869; length, 212½ ft.; breadth, 36 ft.; depth, 21 ft.; weight, 963 tons gross, 921 tons net, ship rigged. While easting off the Cape she made 17½ knots under Capt. G. Movdie. The top speed recorded for the *Sovereign of the Seas* was 16½ knots.

How about a little credit where credit is due?

R. J. DIXON, Port Arthur, Canada.

*We are glad to credit the* Cutty Sark *with the record for top speed. The* Sovereign's *claim to the title of "world's fastest clipper ship," as our article noted, was based on a run of 3,562 miles in 11 days—which was also a record.*

Now you can get into Radio-Television, today's fastest growing big money opportunity field, in months instead of years! My completely new "package unit" training plan prepares you to qualify as a Radio-Television Technician in as short a time as 10 months, or even less! I offer you my training with no monthly payment contract to sign—thus NO RISK and NO OBLIGATION for you! This is America's finest, most modern and really practical training. Includes FM . . . UHF Television and all the most recent developments. My training gets you ready to handle any practical job in the booming Radio-Television industry. Start your own profitable Radio-Television Service Shop . . . . or accept a fine paying job. I have trained hundreds of successful Radio-Television technicians—and I can train you regardless of lack of previous experience. Mail coupon and get all the facts—FREE!

### VALUABLE EQUIPMENT INCLUDED WITH TRAINING

Much of your Sprayberry Training is actual construction, demonstration and experimentation. You get priceless practical experience this way. You build the 6 tube Sprayberry Short Wave and Broadcast Training Radio Receiver, the Sprayberry Television set, multi-range test meter, signal generator, signal tracer, cathode ray oscilloscope and many other projects. All this equipment is yours to keep. You have practically everything you need to set up your own profitable Radio-Television shop. All lessons and books I send you remain your own property.

### OUR 21st YEAR TRAINING MEN FOR RADIO-TELEVISION

***Earn Extra Money While You Learn***

All your Sprayberry Training is given IN YOUR OWN HOME during your free time. Keep on with your present job and income while learning Radio-Television. With each Sprayberry "Package Training Unit" I include money-making plans and special "Business Builders" for spare time Radio-Television service jobs. New Television stations opening everywhere open big money opportunity for men to install UHF antennas—I tell you how! If you expect to be in the Armed Forces later, there is no better preparation than Radio-Television. Mail coupon below . . . get facts FREE. *No salesman will call.*

## FREE TO YOU 3 BIG RADIO-TELEVISION BOOKS

***I invite you to get all the facts—***

I want you to have ALL the facts—without cost! Rush coupon for my three big Radio-Television books! "How to Make Money in Radio-Television" PLUS my new illustrated Television Bulletin PLUS an actual sample Sprayberry Lesson—ALL FREE. No obligation and no salesman will call. Mail coupon!

# Stop Washing and Waxing Your Car

Instead of scrubbing and rubbing, you can now simply *wipe* dirt off, wipe polish on—and leave a beautiful showroom shine that needs no polishing, shows no streaks, and keeps your car looking beautiful for days.

Our amazing WYPE-WASH CLOTH is a thick, soft automobile cloth permanently impregnated with something science calls Silicone. Maybe you've heard about it. Reader's Digest has praised it highly. This fascinating stuff is now widely used by big companies to keep lots of things from sticking to lots of other things. And it's used by us in our cloth to keep road dirt, film, and grime from sticking to your car.

**HOW OUR CLOTH WORKS**

The first time you use our WYPE-WASH CLOTH simply run it gently over every part of your already-clean dry car, including the chrome and the windows. This applies a thin, transparent coating of Silicone. You can't see it or feel it. It doesn't show finger marks like wax. All you *can* see is your car taking on a beautiful, glistening shine.

This glass-like Silicone coating is so slick and smooth that dust, dirt, and grime just can't get a good foothold. Sure, after you speed through a puddle and splash your car with dirty water, it's going to LOOK as if it needs washing. But it DOESN'T! Just a gentle wipe with your dry WYPE-WASH CLOTH—and it's clean and sparkling again!

**NOW BEAUTIFY YOUR CAR ANYTIME, ANYWHERE**

Imagine! Now you can give your car a showroom shine anytime, anywhere—without water, wax, or hard work. You carry WYPE-WASH CLOTH in the glove compartment—and just while you're waiting for your wife (??!!) you can make your car look like it's just had a $2 wash job and a $15 waxing. You can make it completely unnecessary to kill a whole flock of Saturdays prettying up your car! Or, if you've been letting your garage do it *for* you, you can save a whale of a lot of money each year on washing and waxing.

And we could write a book just raving about WYPE-WASH for cleaning car *windows* alone. You just have to see it work with your own eyes to believe how clean it gets your windows, *without* soap and water—and keeps them clean for days at a time, even after a rain. You need never again find yourself yourself trying to drive at night with a dangerously smeary windshield, miles from clean cloths and water. Just a quick wipe with your dry WYPE-WASH, and your windshield and other windows are spotless again! Many other miracle uses too—keeps furniture clean and beautiful; prevents rust on guns and tools, etc.

**USE IT AGAIN AND AGAIN**

No matter how frequently you use WYPE-WASH, it will not lose its "magic." When it becomes soiled, you rinse it out just as quickly and safely as your wife would a pair of nylons. The miracle Silicone will stay right in, because it's there for keeps.

**IF YOU DON'T LIKE IT — WE LOSE OUR CLOTH!**

To convince you that WYPE-WASH is everything we say it is, we Guarantee it up to the hilt. If you're not 100% satisfied with WYPE-WASH, we're out both our cloth and your money—because you can keep the cloth *anyway* and we give you your money back *besides!* With an offer like this, we couldn't stay in business very long if WYPE-WASH weren't pretty wonderful, could we?

**TRY IT FOR A WEEK — THEN DECIDE**

So send for a WYPE-WASH CLOTH today. Try it for a week at our risk. The price is $3.50 for a 24" x 18" cloth (432 square inches). Frankly, that's a lot of money for a cloth! But we couldn't afford you as marvelous a cloth for less, and we're convinced that once you try it, you'll be glad you bought the best! However, *you* be the judge. If you don't share our enthusiasm, keep the cloth (or throw it away) and we will refund your money promptly and cheerfully.

Fair enough? Then order your WYPE-WASH today for only $3.50 postpaid—3 for $9. Mail check or money order to: **MADISON HOUSE, 22 Madison Bldg., 40 Fargo St., Boston 10, Mass.**

**313 HARD-TO-GET ALL-DIFFERENT STAMPS—25¢**

# Inventors

The following are the usual preliminary steps to take toward patent protection.

You are advised first, to make a disclosure of your invention. Date, sign and have this document witnessed by two or more persons who are capable of understanding your invention. The "Evidence of Invention" form mentioned below, we offer as a convenience in making your disclosure and in starting action leading toward patent protection.

Mail your disclosure to the registered patent attorney or agent whom you select to assist you, together with a letter authorizing him to conduct a preliminary search among previously granted U. S. patents for similar types of invention. He then prepares for you a report on the probable patentability of your invention and, if the report is favorable, recommends the further course you should take.

**This firm is registered to practice before the U. S. Patent Office and is available to assist you in the preparation and prosecution of patent applications. We shall be glad to send you without obligation, the "Evidence of Invention" disclosure form mentioned above and our instructive booklet, "Patent Protection for Inventors".**

VICTOR J. EVANS & Co. *Merlin M. Evans*

## THE BIG BOOK THAT REALLY SHOWS YOU HOW!

Covers over 1100 models of 20 makes—**every model made from 1940 through June 1953.** Includes 38,000 specifications and 350 Quick Check Data Tables. Over 1800 clear pictures, diagrams and charts explain things at a glance. Service short cuts speed work amazingly.

Beginners can handle jobs they may not have thought possible for them. Experienced mechanics save hours, help boost their pay checks to big figures.

## HANDLE JOBS EASY . . . . *and r-i-g-h-t!*

From headlights to transmissions, from motors to ignitions, the Chilton Manual tells everything you need to know . . . even to what tools to use. Jobs are carefully indexed. You find what you want in a jiffy.

Remember! This big manual comes from the world's largest automotive publishers (MOTOR AGE and AUTOMOTIVE INDUSTRIES magazines, the Flat Rate Look, etc.) 19 Chilton experts worked hand in hand with auto manufacturers to make every job easy for you. Hundreds of thousands of copies are used by the U.S. Armed Forces, by garages, by apprentice mechanics, by students and in vocational schools.

See for yourself without risking a cent. Use manual 10 days—FREE. If it's not all you expect—and more—return it postpaid and DON'T OWE US A PENNY! Send coupon today to Chilton Co., 56th & Chestnut Sts., Philadelphia 39, Pa.

***Read what users say!***

**FAST!** "Thanks to the Chilton Manual, I did a job in an hour another mechanic had worked on all day." *Gene Arnold, Iowa*

**EASY!** "The how-to-do-it pictures are worth the entire price of the manual!" *Melvin Wade, Penna.*

**Send No Money PRACTICE 10 DAYS FREE!**

# GET INTO RADIO-TELEVISION ELECTRONICS by Shop-Method Home Training

## MASTER ALL PHASES!

Get Master Shop-Method Home Training from an Established Practical Resident School with its own Training Shops, Laboratories, Studios — almost 50 Years of Successful Experience in Training Ambitious Men.

**We Bring National Schools To You!**

Superheterodyne Receiver

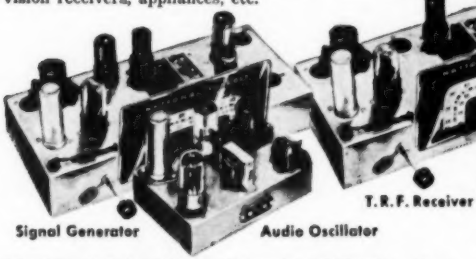
### GOOD JOBS AWAIT THE TRAINED RADIO-TV TECHNICIAN

There is a place for *you* in the great Radio-Television-Electronics industry when you are trained as National Schools will train you at home!

Trained technicians are in growing demand at good pay —in manufacturing, broadcasting, television, communications, radar, research laboratories, home Radio-TV service, and other branches of the field. National Schools Master Shop-Method Home Training, with newly added lessons and equipment, trains you in your spare time, right in your own home, for these fascinating opportunities. OUR METHOD IS PROVED BY THE SUCCESS OF NATIONAL SCHOOLS TRAINED MEN, ALL OVER THE WORLD, SINCE 1905.

### EARN WHILE YOU LEARN

Many National students pay for all or part of their training with spare time earnings. We'll show you how you can do the same! Early in your training, you receive "Spare-time Work" Lessons which will enable you to earn extra money servicing neighbors' and friends' Radio and Television receivers, appliances, etc.



Signal Generator — Audio Oscillator — T.R.F. Receiver

### LEARN BY DOING

You receive and keep all the modern equipment shown above, including tubes and valuable, professional quality Multitester. *No extra charges.*

### National Schools Training is All-Embracing

National Schools prepares you for your choice of many job opportunities. Thousands of home, portable, and auto radios are being sold daily—more than ever before. Television is sweeping the country, too. Co-axial cables are now bringing Television to more cities, towns, and farms every day! National Schools' *complete* training program qualifies you in all fields. Read this partial list of opportunities for trained technicians:

- Business of Your Own • Broadcasting
- Radio Manufacturing, Sales, Service • Telecasting
- Television Manufacturing, Sales, Service
- Laboratories: Installation, Maintenance of Electronic Equipment
- Electrolysis, Call Systems
- Garages: Auto Radio Sales, Service
- Sound Systems and Telephone Companies, Engineering Firms
- Theatre Sound Systems, Police Radio
- And scores of other good jobs in many related fields.

### TELEVISION TRAINING

You get a complete series of up-to-the-minute lessons covering all phases of repairing, servicing and construction. The same lesson texts used by resident students in our modern and complete Television broadcast studios, laboratories and classrooms!

**FREE! RADIO-TV BOOK AND SAMPLE LESSON!**

Send today for National Schools' new, illustrated Book of Opportunity in Radio-Television-Electronics, and an actual Sample Lesson. No cost—no obligation. Use the coupon now—we'll answer by return airmail.

**APPROVED FOR VETERANS AND NON-VETERANS**

AMAZING OFFER

# FREE!

**100 FOREIGN STAMPS**
*from all corners of the world*
**GUARANTEED WORTH $1.00**
**AT STANDARD CATALOG PRICES**
*AND* **SOUVENIR OF WORLD'S RAREST STAMP**
*AND* **VALUABLE STAMP COLLECTOR'S GUIDE**

RUSH coupon at once. We'll send you by return mail this gigantic offer — 100 stamps from Europe, Asia, Africa, South America, Near East and Far East. GUARANTEED WORTH $1.00 at Standard Catalog prices. No telling what you'll find. NOT COST TO YOU!

These valuable stamps are all genuine — unsorted and unpicked. We just scoop them out of sacks we receive from foreign missionaries, banks, etc. and rush them into packets for you.

There are beautiful big pictorials, commemoratives — stamps from great empires and tiny republics. You'll find wild animals, far-off places and famous people on these wonderful stamps — even some from "iron-curtain" countries. Since no one has examined them, you may even find real *hidden treasures,* worth REAL MONEY.

Yes, we'll rush this wonderful offer that gives you 100 stamps from EVERYWHERE, plus a beautiful souvenir of World's Rarest Stamp in color, PLUS our illustrated booklet "Stamp Collector's Guide" — FREE, if you act AT ONCE! Other valuable offers also included for your FREE inspection! If coupon is clipped, send 10c for postage and handling to:

GARCELON STAMP CO.
Dept. 2PS, Calais, Maine

PLUS

**SOUVENIR OF WORLD'S RAREST STAMP**

Here is a treat indeed — and exclusive with us. Only here can you get this handsome, new folder with the beautiful reproduction in color and the fascinating story about the British Guiana stamp that sold for $1.50 in 1873 and is worth $50,000 today! You'll be the envy of all who see it! Display it in your album or frame it for your room!

**GET ALL 3 FREE!**

**GARCELON STAMP CO., Dept. 2 PS, Calais, Maine**

**Rush me FREE 100 FOREIGN Stamps, Rarest Stamp Souvenir and STAMP COLLECTOR'S GUIDE. Enclosed is 10c for postage and handling. PLEASE PRINT**

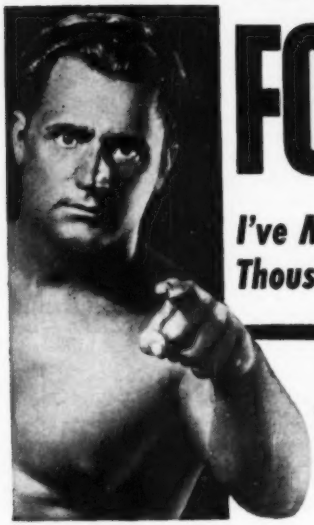
# NEW BODIES FOR OLD!



## *I've Made New Men Out of Thousands of Other Fellows...*

## "Here's what I did for THOMAS MANFRE...and what I can do for you!"

—*Charles Atlas*

GIVE me a skinny, pepless, second-rate body—and I'll cram it so full of handsome, bulging new muscle that your friends will grow bug-eyed! . . . I'll wake up that sleeping energy of yours and make it hum like a high-powered motor! Man, you'll *feel* and *look* different! You'll begin to *LIVE!*

### Let Me Make YOU a NEW MAN—IN JUST 15 MINUTES A DAY

You wouldn't believe it, but I myself used to be a 97-lb. weakling. Fellows called me "Skinny." Girls snickered and made fun of me behind my back. I was a flop. THEN I discovered my marvelous new muscle-building system—"*Dynamic Tension.*" And it turned me into such a *complete* specimen of MANHOOD that today I hold the title "THE WORLD'S MOST PERFECTLY DEVELOPED MAN."

**ARE YOU**
Skinny and run down? Always tired? Nervous? Lacking in Confidence? Constipated? Suffering from bad breath?

**What to Do About It Is told in my free book!**

### What Is "Dynamic Tension?" How Does It Work?

When you look in the mirror and see a healthy, husky, strapping fellow smiling back at you—then you'll realize how fast "*Dynamic Tension*" GETS RESULTS!

"*Dynamic Tension*" is the easy, NATURAL method you can practice in the privacy of your own room—JUST 15 MINUTES EACH DAY—while your scrawny chest and shoulder muscles begin to swell, ripple . . . those spindly arms and legs of yours bulge . . . and your whole body starts to feel "alive," full of zip and go!

Atlas Championship Cup won by Thomas Manfre, one of Charles Atlas' pupils.

### One Postage Stamp May Change Your Whole Life!

Sure, I gave Thomas Manfre (shown above) a NEW BODY. But he's just one of thousands. I'm steadily building broad-shouldered, dynamic MEN—day by day—the country over. 3,000,000 fellows, young and old have already gambled a postage stamp to ask for my FREE book. They wanted to read and see for themselves how I build up scrawny bodies, and how I pare down fat, flabby ones—how I turn them into human dynamos of pure MANPOWER.

## FREE My 32-Page Illustrated Book Is Yours Not for $1.00 or 10c—But FREE

Send NOW for my famous book, "Everlasting Health and Strength." 32 pages, crammed with photographs and valuable advice. Shows what "Dynamic Tension" can do, answers many vital questions. Page by Page it shows what I can do for YOU.

This book is a **real prize** for any fellow who wants a better build. Yet I'll send you a copy absolutely FREE. Just glancing through it may mean the turning point in your whole life! Rush the coupon to me personally. **CHARLES ATLAS, Dept. 1B, 115 East 23rd St., New York 10, N. Y.**

**CHARLES ATLAS, Dept. 1B,**
**115 East 23rd St., New York 10, N. Y.**

Send me—absolutely FREE—a copy of your famous book, "Everlasting Health and Strength"—32 pages, crammed with actual photographs, answers to vital health questions, and valuable advice to every man who wants a better build. I understand this book is mine to keep, and sending for it does not obligate me in any way.

## Every One's Talking About This

# WONDERFUL, EASY WAY TO LEARN MUSIC!

***No Matter WHO You Are, or WHERE You Live, or How LITTLE You Know About Music, You Can Soon Play Your Favorite Pieces by Note. FREE BOOK Tells All About It.***

NO wonder over 900,000 people have chosen this modern way to learn music! Here at last is a method by which anyone can learn to play his favorite musical instrument quickly and easily.

**EVEN IF you don't know a note of music now . . .**
**EVEN IF there is no music teacher near your home . . .**
**EVEN IF you couldn't afford private lessons . . .**
**EVEN IF you can spare only a few minutes a day, or a few hours a week . . .**
**EVEN IF you are "tied down" to your job or your home . . .**
**EVEN IF you think "you lack musical talent" . . .**

**EVEN IF** all these things are true of you, we guarantee to show you how to play! So **quickly** your friends will be amazed. So **pleasantly** you'll really look forward to each new lesson. So **inexpensively** you'll never miss the few cents per lesson it costs!

### Secret of Rapid Progress

Instead of making you do tedious scales and tiresome exercises, the U. S. School of Music Lessons (in words and pictures) enable you to **learn by playing real pieces**—right from the start! As a result, your progress is amazingly rapid. Almost before you realize it, you find yourself playing all your favorite pieces **by note.**

Why not let this famous home study method bring the many pleasures of music into YOUR life? New friends. Extra money from playing or teaching. Greater **listening** pleasure. Possibly a brilliant career. Best of all, the deep **personal** satisfaction of being able to make your own music . . . provide your own entertainment.

## SEND FOR Free Book and Free Lesson-Sample

Let us PROVE that what we say is true. See for yourself why our School has been so successful for 56 years. Mail the coupon below and we'll gladly mail you our valuable 36-page FREE BOOK — and also a Free Lesson-Sample you can try out right at home. No obligation; no salesman will call on you. **U. S. SCHOOL OF MUSIC, STUDIO 152, Port Washington, N. Y.** (Reduced Prices on instruments to our students.)

### THOUSANDS PLAY NOW WHO NEVER THOUGHT THEY COULD

**Now Plays for Dances**

"I DIDN'T KNOW ONE NOTE! Three months later I started to play for dances. I have been invited to many parties and made people very happy with my music."—**Miss Rosie Montemurro, Vancouver, B. C., Canada.**

**Amazes Her Friends**

"I bet some friends that I could learn piano quickly. They didn't believe me—because I am slow learning. Imagine their surprise when I played for them. One said, 'Why, it sounds like you've been playing for years!'"—**Louise Gomez, Oakland, Cal.**

**"Easy As Falling Off Log"**

"It's easy as falling off a log. I have always wanted to play and now a life-long dream is being fulfilled."—**Mrs. Phyllis B. Jones, Blanding, Utah.**

**Learns Faster**

"I have no special talent—but thanks to your method, I play my guitar (according to impartial people) better than many students who have taken lessons from teachers for longer periods."—**Myrella-Muguette Saint-Andre, Montreal, P. Q., Canada.**

**Now Famous Band Leader**

"I got my start in music with a U. S. School Course. How easy it is to learn to read notes and play an instrument this 'teach yourself' way! I've enrolled my two daughters."—**Lawrence Welk, famous orchestra leader.**

**U. S. SCHOOL OF MUSIC, Studio 152, Port Washington, N. Y.**

SPARE TIME!

## Sensational New

# HOME-BUSINESS!

**AMAZING NEW PRINTING SECRETS CAN BE YOURS**

**For Pleasure & Profit.** Once you learn the closely guarded printing secrets of Screen-Print there's virtually no limit to how much "extra money" you can earn. SPARE-TIME WORK—For FULL-TIME PROFITS. Screen-Printing is the most fascinating Home-Business ever! Learn in a few days and start making money immediately. Even earn while you learn—it's amazing!

**LEARN AN "EXTRA TRADE"**

**MEN! WOMEN!** Learn Screen-Printing and make up to $200 per week—even working for someone else. Learn Screen-Printing and you learn an "extra trade."

**PRINT WITHOUT A PRINTING PRESS!**

OR ANY SPECIAL EQUIPMENT

SCREEN PRINT
TRADE MARK REG.

**PRINT colorful ADVERTISING DISPLAYS *at home!***

You've seen thousands of them in stores, gas stations, theaters, markets — everywhere! Many of these displays are printed by Screen-Printing in brilliant, "eye-catching" colors.

**PRINT expensive SIGNS, BANNERS, POSTERS, LABELS, etc. *at home!***

EVERY BUSINESS, large or small, needs these items—they order them almost daily. It's possible to specialize in Screen-Printing banners alone and not all the orders you can take care of.

**PRINT beautiful CLOTH, FABRICS, GLASSES, NOVELTIES, etc. *at home!***

Because you can Screen-Print on any kind of materials, there are thousands of uses. Print lamps, glassware, ties, calendars, draperies, wall paper, flags, dress materials, balloons, bowls, etc. Orders come from gift shops, manufacturers, markets, department stores, etc.

## WHAT IS SCREEN PRINTING?

It's a revolutionary new method of printing—*WITHOUT* an expensive printing press. This amazing new development lets you print quantities of 25, 50, 100, 500 or even 1,000 in many cases, FOR LESS THAN YOU CAN PRINT ON A $5,000 PRINTING PRESS. Just put anything under a screen and take out beautiful products of printing—no expensive plates or "cuts" needed. No big overhead. Never has such an opportunity been offered the spare-time person who wants to make "Extra Income" in his home. This amazing NEW INDUSTRY can mean huge spare time profits for you.

**PRINT IN COLORS—EVEN NEW FLUORESCENT COLORS**
There's no limit to the number of colors you can use. It's easy to print in luminescent, "glowing" fluorescent colors, too. (These "brilliant" new inks can ONLY be printed satisfactorily by the Screen-Print method.) Screen-Print lets you print on paper, cardboard, leather, glass, wood, plaster, fabrics—anything!

**NO ART NECESSARY—EASY TO LEARN**
Anyone (young or old) can be a Screen-Printing expert—he doesn't have to be a "Rembrandt" either. Beautiful printing can be produced WITHOUT doing any art work whatsoever—simple tracing is all that's necessary in most cases. Simplified photo method ELIMINATES ALL HAND WORK. No camera needed.

**One of America's FASTEST GROWING BUSINESSES!**
Hundreds are already profiting handsomely with Screen-Print. This New method may revolutionize the printing business, as we know it today! Get the facts NOW!

**A BUSINESS OF YOUR OWN**
Be your own boss. Operate from the corner of your kitchen or garage. Build a successful future with a few cents worth of materials. Screen-Printing is the opportunity to establish a spare-time business without sacrificing job or pay check—have 2 INCOMES INSTEAD OF ONE.

"I already make 75% of my expenses doing Screen-Printing only spare-time" says Mr. E. L., Ontario.

**THERE'S $$$$ IN ADVERTISING!**
Here's your chance to GET INTO ADVERTISING—one of the largest paying businesses in America. Most Screen-Printing is used for advertising purposes. Materials cost you 10¢—you can earn 90¢—few businesses offer this high profit.

**HUGE DEMAND! ENORMOUS PROFITS!**
Millions of shops, stores, theaters, markets—almost any business needs Screen-Printing done for them. It's possible to even do your business by mail. No house-to-house selling either. You can make $10 to $20 profit on each dollar of cost on some jobs. Here's ...

**YOUR "Chance of a Lifetime" OPPORTUNITY** to "cash-in" on a new printing method not generally known. We supply everything you need! From easy step-by-step instructions-secrets plus materials enough to make money immediately. A complete ready-made BUSINESS PLAN guides you every step of the way. This all can be yours—at our risk. Space here does not permit telling you all the terrific opportunities of Screen-Print. Don't waste a minute — mail coupon NOW! TODAY!—and get all the FREE FACTS and ACTUAL SAMPLE.

# 3 Conditions that hinder the CONTINUED GROWTH of HAIR

1 FALLING HAIR 2 ITCHING SCALP 3 DANDRUFF SCALE

Thousands have found blessed relief and amazing results with

## HARE-ON HAIR FORMULA WITH LANOLIN

This exclusive formula was developed for use by both men and women who suffer with itching scalp, dandruff scale or falling hair. Scientists agree that hair will continue to grow as long as the hair follicle is undamaged and a normal, healthy blood supply to the scalp is maintained. We believe the hair follicles of many bald or partially bald people are alive even though no hair is growing from them.

BEFORE AFTER BEFORE AFTER

BOB STEPHENS, Rockville Centre, N. Y., writes: "I have used HARE-ON for 6 months and am still using it. I recommend this formula for any male or female of any age suffering from heavy scale of dandruff and excessive loss of hair. You'll witness a miracle like I did, as a result a good thick head of hair, thanks to HARE-ON."

IRVING SCHWARTZ, Long Beach, N. Y., says: "My bald spot was spreading relentlessly in spite of all efforts to stop it until I started using the HARE-ON Home Treatment Course. Results were noticeable after only a few weeks of easy self-treatment with HARE-ON and now I again have a good healthy head of hair."

*(Photos are warranted unretouched prints of original negatives made by a reputable professional photographer. Photographer's name and street addresses of users on request.)*

**HARE-ON WITH LANOLIN HOME TREATMENT COURSE** is sincerely recommended as a simple, effective method of obtaining relief from the tortures of itching scalp, unsightly dandruff scale and falling hair that afflicts both men and women. It contains no water or alcohol.

The makers of HARE-ON do not classify their exclusive formula as a so-called "hair grower." They do not guarantee that it will grow new hair, in fact, not every user has reported renewed hair growth. The use of HARE-ON Home Treatment Method as directed is designed to restore the scalp blood supply. By thus discouraging the common causes of hair loss it helps the scalp to function effectively in promoting the growth of hair.

**LESS THAN 25c A TREATMENT!**

The HARE-ON Home Treatment Course is easy to use. Apply this exclusive formula yourself, simple directions with each package. No mess, no bother, no odor! Inexpensive to use! Generous supply of HARE-ON, more than enough for 8 Weeks Home Treatment Course for only $10, plus $2 Federal Tax, **actually less than 25c a treatment!**

**NO-RISK GUARANTEE**

HARE-ON (Hair Formula with LANOLIN) is guaranteed harmless and may be used beneficially by every member of the family. If for any reason, you are not satisfied with HARE-ON, simply return the unused portion and ENTIRE PURCHASE PRICE WILL BE REFUNDED.

**PROVE IT TO YOURSELF NOW!** Why suffer longer? ***You will thank us for the rest of your life!***

**MAIL COUPON TODAY!**

**HARE-ON CORP.** PS 284
**P.O. Box 474, Hempstead, N. Y.**

Please send me—in plain wrapper—8 weeks HARE-ON (Hair Formula with LANOLIN) Home Treatment Course with simple DIRECTIONS for use. If not satisfied I will return unused portion for FULL CASH REFUND.

☐ SEND PREPAID. I enclose $10 plus $2 Fed. Tax—TOTAL $12. Use Check or money order. We pay postage.

☐ SEND C.O.D. I enclose $2 Deposit and will pay postman $10 balance, plus postage charges.

# Kidney Slow-Down May Bring Restless Nights

When kidney function slows down, many folks complain of nagging backache, headaches, dizziness and loss of pep and energy. Don't suffer restless nights with these discomforts if reduced kidney function is getting you down—due to such common causes as stress and strain, over-exertion or exposure to cold. Minor bladder irritations due to cold or wrong diet may cause getting up nights or frequent passages.

Don't neglect your kidneys if these conditions bother you. Try Doan's Pills—a mild diuretic. Used successfully by millions for over 50 years. It's amazing how many times Doan's give happy relief from these discomforts—help the 15 miles of kidney tubes and filters flush out waste. Get Doan's Pills today!

# I have a good proposition for men or women who would like to make an extra $125.00 a month for spare time

These 15 Utensils and covers are all interchangeable. They fit into each other so as to make up 23 different cooking combinations for "Waterless Cooking." The four egg cups make a 19-piece set that covers 99% of all cooking needs.

**By Frank W. Strong**

**I won't make any fancy promises of $50.00 a day. And I'm not after any of your money. What I can do is show you a simple plan by which you can pick up enough extra money every week to help make up for the money you're losing in higher taxes and higher costs of living. And I supply your working outfit free—no charge and no deposit. Just your name is all I need. Read my proposition. It is honest and down to earth. And it won't cost you anything to try it.**

TODAY almost everyone needs extra money. Increased taxes and increased living costs are making your dollar worth less and less, so you have to have more and more dollars just to keep even. There are lots of good ways to make extra money. I don't say my way is the best. I do say it's one of the easiest and most pleasant. It even leads to making new friends. It doesn't call for house-to-house canvassing, either. Let me explain:

I am Sales Manager for a very big manufacturing company. We make Stainless Steel Cooking Utensils. We do an enormous business with hotels, restaurants, hospitals, and institutions. We also make utensils for the Army, Navy and Air Force.

As a result, we have very low manufacturing costs. We can **sell** a set of Stainless Steel Cookware for home use for about what it costs some companies **to make it!** In fact, for years we did sell to one Sales Organization who resold our cookware house to house under their own name. They got $120.00 for the same set that our people sell for approximately half of that.

You've probably heard of salesmen who give dinner parties in homes and then take orders from the ladies who attend. These salesmen have to get a high price because it costs money to give parties—he has to make his share—and his supervisor has to make his. The sales organization adds a profit and the manufacturer has to make his. So there are about four or five profits added to the actual manufacturing cost.

About two years ago I got to figuring. There are five good reasons why Stainless Steel is the kind of cookware that should be in every home. 1. It washes as easy as a drinking glass. No scouring, scraping or scrubbing. 2. It doesn't rust or corrode—and it doesn't stain. 3. It doesn't affect the taste of food. 4. Carlton Ware enables you to prepare food by the method called "waterless cooking" which keeps more of the natural minerals and vitamins in your food and makes the food taste better. 5. Buy it once and you're all through buying for life. You **can't** wear it out.

You see, Stainless Steel is not a coated or plated metal, like chromium plate on the bumper of your car. That chromium plate can chip or wear off and exposes the raw steel underneath. Then the steel rusts. But our kind of Stainless Steel is stainless **all the way through.** It can't chip, crack, peel, or wear off. You could use a set the rest of your lifetime and then give it to your children and it would still be good for **their** children.

Well, I figured that if the price was low enough every family could afford Stainless Steel Carlton Ware. So I worked out this plan! We would sell a complete set of 15 pieces at a figure that would include our profit. Then you add your profit and re-sell this set to your friends and neighbors for just about half of the usual price charged on the "party plan." They are glad to get such a bargain and they feel that you've done them a real favor.

The plan becomes like an endless chain. When a woman gets her first piece of Carlton Ware she gets so thrilled with its better cooking and easy cleaning that she talks and talks. She can't wait to demonstrate it to her friends and tell them all about it. She's so proud of its silvery sheen that she just "bubbles over." So just by letting **your own friends** in on a good thing, before you know it **their** friends call you up and ask if you can get the same low prices for them. Then **their** friends call you and their **friends' friends.** It goes on and on!

To make an extra $125.00 a month, you only have to deliver seven sets and that's easy. Mrs. Montell in Pennsylvania took orders for $1400.00 worth in her first month. And Mrs. William Hanchow wrote, "Got my set Saturday—I already have 17 customers."

Now, I'll let you in on another part of my plan. If you take only ten set orders a month for six months my company pays your expenses for a winter vacation in Florida. We maintain a beautiful resort in the Florida Keys just so our sales representatives can enjoy a Florida vacation at company expense.

Get all the information right now. I'll not only be glad to send Free Information, I'll also send you a complete demonstrating outfit that you can show to your friends and neighbors. And I'll give you exact instructions by which you can write up orders without ever trying to "sell" and without making any house-to-house calls.

Everything I send you is free. When you qualify, I'll even furnish you with a complete 15-piece set of Carlton Ware to use in your own kitchen and show to your friends. It's an extra bonus I give to encourage good earnings on your part.

Send your name today in confidence. You'll be glad you wrote. This ad may not appear in this magazine again, so don't take any chances on losing out. Send the coupon or just send your name on a postcard. I won't send any salesmen to call on you and you won't be under the slightest obligation.

**Frank W. Strong**

# EAT ANYTHING WITH FALSE TEETH

If you have trouble with plates that slip, rock and cause sore gums—try Brimms Plasti-Liner. One application makes plates fit *snugly without powder or paste*, because Brimms Plasti-Liner hardens permanently to your plate. It relines and refits loose plates in a way no powder or paste can do. Even on old rubber plates you get good results six months to a year or longer. **YOU CAN EAT ANYTHING!** Simply lay soft strip of Plasti-Liner on troublesome upper or lower. Bite and it molds perfectly. *Easy to use*, tasteless, odorless, harmless to you and your plates. Removable as directed. Plate cleaner included. Money back if not completely satisfied. If not available at your drug store, send $1.25 for reliner for 1 plate.

**PLASTI-LINER INC., Buffalo 11, New York — Dept. 54-A3**

**BRIMMS PLASTI-LINER**
THE PERMANENT DENTURE RELINER

**AUTO-SHOCKO** Have some REAL FUN with your car. AUTO SHOCKO gives anyone who touches the outside surface of your car a HARMLESS but VERY EFFECTIVE shock. When the Shocko switch is on, the entire outer surface of the car becomes charged. You can also charge your buddy's car by touching your bumper to his. He won't be able to get into his car until you turn off your switch. Can also be left on while car is parked to keep vandals from scratching or damaging your car. Will not run down your battery. AUTO SHOCKO is the best FUN MAKER you will ever own. Easily installed in a few minutes. Available for both 6 and 12 volt systems (please specify). Complete with AUTO SHOCKO unit, wire, switch, etc. Price $9.95 ppd., or COD plus postage. $1 deposit required on COD orders. *Dealer inquiries invited.*

# TRAIN FOR GOOD PAY IN A FIELD THAT ISN'T CROWDED!

# NOW! you can LEARN ELECTRIC MOTOR REPAIR

. . . A good-paying, modern profession

## . . . for only $6

## FOR THE COMPLETE TRAINING

### OPPORTUNITIES EVERYWHERE!

Don't drift into a rut! Don't train for something that everybody and his brother are studying! Consider the facts. . . . The average small home has at least 11 electric motors! Big homes have many more—in phonographs, recorders, oil burners, refrigerators, washers, fans, clocks, mixers, cleaners, air conditioners, etc., etc. Millions more in office, industrial, mining, and transit equipment. Be the well-paid expert who can keep them working!

### COVERS EVERY MOTOR TYPE IN COMMON USE

Every day, more and more electric motors and motor control systems are being used BOTH in industry and in home appliances. The expert who can install and keep them working properly is a valuable man in this Electrical Age. The pay is surprisingly good. The field is tremendous—and growing rapidly. Trained men find opportunities everywhere for full or part time work. ELECTRIC MOTOR REPAIR, the big 560-page training course book teaches you the work step by step—quickly and easily—at home in spare time. There is no other book like it. Ideal for beginners or for actual bench use in busy shops. Thousands already in use in leading vocational schools, shops, and for home study.

### SHOWS YOU HOW . . . Every Step of the Way!

Based on what you can learn quickly at home from ELECTRIC MOTOR REPAIR you can train for prompt, profitable installation, servicing, repairing and complete rewinding of practically any motor in use today. You learn fast! You learn right! Every subject is clearly explained by text AND ALSO by more than 900 illustrations and diagrams. You not only read what to do—you SEE how it is done. Quick reference guides tell you how to handle specific jobs. When a certain motor comes in for repairs, just look it up. ELECTRIC MOTOR REPAIR tells you what to do—and exactly how to do it.

ELECTRIC MOTOR REPAIR is designed for use right at the service bench. Unique Duo-Spiral Binding divides the book into two sections so that both text and related diagrams can be viewed together. An instructor standing by your side could hardly do better! ELECTRIC MOTOR REPAIR covers the entire field—from alternating- and direct-current motors and generators, etc., to mechanical and electrical and electronic control systems. Right down the line it explains trouble diagnosing, repair, rewinding and maintenance in a way you can easily understand.

### FREE STUDY GUIDE

*A unique Study Guide booklet of 500 practical motor study questions—priced and sold separately at 25c—is yours FREE with your request to examine ELECTRIC MOTOR REPAIR book. Makes learning easier—speeds up the work! See coupon.*

### LEARN FAST . . . no lessons to wait for! EARN WHILE YOU LEARN

Practice by repairing motors for friends, neighbors or nearby business houses. Earn while you learn this profitable, fast-growing business!

If sold as a course and sent to you in lesson form, you'd regard ELECTRIC MOTOR REPAIR **as a bargain at 10 times the price!** Instead, you get it all at once—for only $6. You learn fast . . . and right. Here are just a few of the motor types that are fully covered:

**Split-Phase Motors**
**Capacitor Motors**

**Repulsion-type Motors**
**Polyphase Motors**
**Alternating-Current Motor Controls**
**Direct-Current Armature Winding**
**Direct-Current Motors**
**Direct-Current Motor Controls**
**Universal, Shaded-pole, and Fan Motors**
**D-C Generators, Synchronous Motors and Generators**
**Electronic Motor Control . . . and essential motor data**

**Dept. PS-24, RINEHART BOOKS, Inc., Technical Division, 232 Madison Ave., New York 16, N. Y.**

Send me the 560-page ELECTRIC MOTOR REPAIR home-training book for 10-day FREE EXAMINATION. At the end of 10 days, I will either return book to you postpaid in good condition or send you the sum of $6.00 in full payment plus the FREE Study Guide which is mine to keep whether I buy the book or not.

# "TOOK IN $217 FIRST 10 DAYS"

*Some make more, some less...*

**We help you to start Your Own All-Year Business**

***Make Big Money!*** With our easily operated, highly efficient wall washer, Charles Stelle took in $217 gross in first ten days. E. L. Goss took in more than $10,000 in one year. E. C. Taber wrote, "*I made $400 gross in two weeks.*" And no wonder... this machine washes walls 6 times faster and better than by hand.

**Your Money-making Opportunity.** We want more men to go into this profitable business for themselves and enjoy independence—freedom from bosses, layoffs. Customers everywhere—homes, offices, schools, churches, hotels, etc. How much you earn depends largely on *you*. What you take in is mostly profit. No need to rent shop or office; operate business from home. Can start spare time until your full time is available.

***Lose no time. Get all facts without obligation***

**FREE BOOK! MAIL COUPON TODAY!**

**VON SCHRADER MFG. CO.**
**1211 "W" Pl., Racine, Wisconsin**

Send at once (no obligation) your **FREE** booklet containing information about your WALL WASHING MACHINE and how I can start my own permanent, profitable business.

# AT LAST . . . A NEW AUTOMATIC *Underground Sprinkler System* EVERY HOME-OWNER CAN AFFORD!

EVERSPRAY INSTALLED AT NORTH ACRES GARDENS, ANDERSON, INDIANA

AS LOW AS $59.50 COMPLETE

EASY TO INSTALL IN A FEW HOURS
*without damage to Lawn or Garden*
ORDINARY WRENCH ONLY TOOL NEEDED

# SALES GOING CRAZY COAST TO COAST!

## Salesman Demonstrates EVERSPRAY on Prospect's Own Lawn—*in Less than 10 Minutes!*

Salesmen! Get in at the very beginning of the season. Make 1954 the biggest money year you've ever known. You **can't miss** with EVERSPRAY and here's why. EVERSPRAY is a real *underground* Sprinkler System. It's built exactly like those you see on million dollar estates. **Yet it's priced so low that even the owner of the most modest home can afford it!** It's a system that ends forever the drudgery of hand sprinkling. EVERSPRAY never gets out of order—nothing to rust, rot, or wear out — never needs repairs — doesn't cost a penny for upkeep. At trifling cost, it gives the home-owner the beautiful lawn he has always dreamed of, but could never have until **now.**

## NOTHING ELSE LIKE IT

EVERSPRAY is not an untried gadget. It is a proved and tested Sprinkler System that appeals **instantly** to every home-owner. And it's one of those terrific money-making fast-sellers that appeals to top-flight Salesmen—men accustomed to selling "big-ticket" Home Improvement Products.

Any man who calls himself a Salesman can really clean up with EVERSPRAY because **every home-owner is a prospect.** He **wants** what you can **give** him with EVERSPRAY—the beautiful lawn he has always wanted—a lawn that is the envy of everyone who sees it. Best of all, the owner installs EVERSPRAY **himself**—or you can do it for him and collect an **extra fee** for this **extra service.** As H. C. Lewis of Great Bend, Kansas writes: "The three EVERSPRAY Systems we installed were up to your promises in every way and water even a greater area than said. One man and myself **assembled and installed all 3 systems in 1 afternoon!"**

## $60 A DAY—WITH "JACK POT" PYRAMID PLAN

In the New Automatic EVERSPRAY you've got your hands on the biggest Spring, Summer and Autumn seller ever offered Salesmen. When most lines are dying because of hot weather, **EVERSPRAY is hitting the very peak of the Big Money selling season!** Our sure-fire "Jack-Pot" Pyramid Sales Plan turns your **first** sale into TEN or more. Then EXTRA orders start pouring into your hands **automatically — with little effort on your part.** It's a "push-over" for any good salesman. You make $29.00 on every order, a net of **$60.00** on only **3 sales a day!**

## FREE! MAIL COUPON FOR FULL PARTICULARS

Limited space does not permit my giving you full details here. But I'll rush complete information to you by return mail if you'll send me the coupon now. Don't lose a minute in getting the facts. Time is precious, so act promptly. Fill in and get the coupon in the mail right now. It may well prove to be the most profitable step you have taken in your entire selling career. —*John Oakman, Sales Mgr.*

## *Only* EVERSPRAY gives Home Owners these EXCLUSIVE *Features:*

ELECTRONIC, AUTOMATIC Device turns water ON at pre-determined hour then shuts water OFF automatically. Waters lawn regularly even when owner is on vacation.

"POP-UP" Spray Heads *and all other parts* made of SOLID BRASS. Six heads water up to 1000 sq. ft. of lawn. Finger-tip adjustment gives any desired spray — from fine mist to heavy rain.

AUTOMATIC DRAIN VALVE makes entire System absolutely "Freeze-Proof" even in zero weather.

SPECIAL ALLOY SOLID COPPER PIPING. Timetested *underground.* This "just-right" temper permits laying pipe underground in straight lengths for maximum pressure and water flow.

F. H. A. APPROVED. Customer can buy for as little as $2.00 per month.

**EVERSPRAY DIVISION, 2001-09 W. Carroll Ave., Dept. 22, Chicago 12, Ill.**

## Be a USER-AGENT *And Get Your EVERSPRAY FREE*

**Home Owners!** The very moment your own EVERSPRAY starts sprinkling, your friends and neighbors will want to know where THEY can get one, too! Just send us their orders on our User-Agent Plan and quickly get back in profits three to four times the cost of your own EVERSPRAY. Check coupon if you are interested in this Plan.

## DISTRIBUTORS WANTED

A few Big-Profit County Franchises still available. Plenty of leads provided from our Advertising in National Magazines. Please write me a letter stating what territory you want, what item or items you now handle, how many men in your present Sales Crew and any other information you care to give me. I will hold all information in strict confidence.

JOHN OAKMAN, Sales Mgr.

# STOP BURNING OIL!

LOSING POWER
WASTING $$$

**When your car "eats-up" oil, loses that get-up-and-go power, has poor gas mileage, it's a sure sign that you have worn rings, pistons, and cylinder walls in your engine. This is robbing you of driving pleasure and valuable $$$ to the tune of $250 every 10,000 miles in oil, gas, and repair bills.**

**WHAT CAN YOU DO ABOUT IT?**

You can either have an expensive overhaul job done or offset this wear with a

**RING-RE-NU MOTOR RECONDITIONER KIT**

**It's the inexpensive, proven answer to a worn engine. This terrific 1-2 combination restores power and zip to your car without expensive repair work, reduces oil burning, slashes gas consumption, brings back that "new car" performance to your car.**

**HERE'S HOW THIS DOUBLE VALUE KIT PERFORMS!**

**1. PVR COMPOUND—is a hard hitting engine reconditioner that removes sludge, tars, sticky greases from a tired, worn engine. Pour in carburetor, idle engine. Leaves rings, valves, pistons whistle clean, ready for . . .**

**2. RING-RE-NU — the amazing compound which when squeezed by tube on your pistons forms a tough, pliable, self-expanding seal on rings and pistons to compensate for wear.**

**RESULT! — You get power-packed, economical driving pleasure. Good for 10,000 plus miles. Adds years to the life of your car. Guaranteed not to harm the finest engine. Takes only 30 minutes to install.**

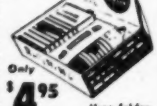
**Read ACTUAL PROOF From One of 100,000 Satisfied Users!**

Cadillac Owner, K. L. G., Lawrence, Mass. writes — "My Cadillac was burning 2 qts. of oil every 100 miles. I have now travelled 400 miles since installing the kit. Haven't used one drop of oil. Further my gas consumption has been cut in half. I'm more than pleased with results — best investment I ever made."

**NOTE! DON'T BUY *HALF* A TREATMENT!**

Ring-Re-Nu is more than just a seal—it's a complete 1-2 combination. PVR to clean your engine. RING-RE-NU to seal in that "new car" power.

1 tube kit $4.95 ppd. treats all cars except large 8 cyl. autos which require special 2 tube kit at $8.95 ppd. sold with money back guarantee. (C.O.D.'s accepted. $1 deposit required, bal. and postage on arrival.) For economical, power-packed, new car performance — rush order to:



Only $4.95

(free folder available on request)

# HEARING BAD?

If so, you will be happy to know how we have improved the hearing and relieved those miserable head noises, caused by catarrh of the head, for thousands of people **(many past 70)** who have used our simple Elmo Palliative Home Treatment in the past 16 years. This may be the answer to your prayer. **NOTHING TO WEAR.** Here are **SOME** of the symptoms that may likely be causing your catarrhal deafness and head noises: Head feels stopped up from mucus. Dropping of mucus in throat. Hawking and spitting. Mucus in nose or throat every day. Hearing worse with a cold. Hear — but don't understand words. Hear better on clear days. Worse on rainy days. Head noises like crickets, bells, whistles, clicking, escaping steam or many other sounds. If your condition is caused by catarrh of the head, you, too, may likely enjoy such wonderful relief as many others have reported. **WRITE TODAY FOR PROOF AND 30 DAY TRIAL OFFER.**

# TRAINED MEN NEEDED

## BIG PAY—GOOD FUTURE

☐ TELEVISION ☐ ELECTRONICS
☐ DIESEL ☐ AUTO

WHY WORK FOR LOW PAY or risk being out of a job??? Usually the properly trained man has a steady job . . . through good times or bad. Even back during DEPRESSION there was a *big demand* for Bailey Trained men.

In only 5½ to 6 months we can train YOU to enter one of the big pay fields!

No previous experience or special education necessary. With our method of training you do not spend years pouring over books, figures, charts and graphs. You learn by rebuilding, repairing, testing and operating the most modern equipment, under the guidance of experienced, courteous and friendly instructors. This method of training gives you the experience and confidence required to step right into the big pay jobs without spending years as a mechanic's helper.

It's EASIER and COSTS LESS than you may think to get this residence shop training . . . we help you find part-time jobs while in school—full-time jobs after graduation. Check subject above in which you are interested and mail for complete information.

LOUIS SCHIRMER *Orchidist*

## Successful Home Grower SHOWS YOU HOW

Louis Schirmer, successful home grower, shows you step-by-step how he and Mrs. Schirmer started with a few plants at home, developed a **big-profit business,** and grew an Orchid collection now worth a fortune. **Learn how Orchids multiply** — how one plant may become many, each as valuable as the first. No big investment. No overhead. Takes few minutes a week. Big-profit orders come from individuals, florists, hotels, clubs, etc. Popular year-round gift. **Millions sold by Mail-Order.** Schirmer shows you how!

You can grow gorgeous Cattleya Orchids like this in your own home!

**Home Growers Coast to Coast Benefit from Schirmers' Help**

"A wonderful course, written so anyone can understand it." J. G. Michigan

"I can sell all the Orchids I can produce." M. H. Idaho

**Complete Instructions and Living Orchid Plants Sent for You to Examine at Home Without Risk**

Complete Directions—secrets of the experts—in simple language, jam-packed with "show-how" drawings, gorgeous **full-color pictures** of Orchids. Also a real blooming size Orchid plant from the Schirmer's own Gardens. **Everything you need to start** is yours to **examine at home, without risk.** FREE—full details. Learn how you may become an Orchid Grower. **Send no money! Write today. Airmail is quickest.**

## OVERHAUL YOUR MOTOR *in 10 minutes*

**STOP BURNING OIL, STOP PISTON SLAP**
*15,000 Mile Performance Guarantee!*

**1st Step—CLEANSE WITH "MOTOR PURGE"**—In the FIRST step of the famous Motor Renew Kit treatment, the "Purge" formula cleans, quiets and frees rings, valves and pistons from efficiency and power robbing carbon, gum and varnish. Pour this miracle solvent into the cylinders, run your motor and watch the combustion residue billow out of your exhaust pipe.

**2nd Step—RENEW WITH "COMPRESSION SEAL"**—RESTORE COMPRESSION . . . GET NEW POWER, SPEED AND ECONOMY with "Compression Seal"! As the SECOND step of the Renew treatment, squeeze this self expanding mineral compound into your cylinder where it can fill worn spots (which cause compression leaks) between cylinder walls and pistons. Thus it restores compression . . . cuts oil-gas waste and eliminates costly engine overhaul and ring jobs.

**100% MONEY BACK GUARANTEE!**
**Free Auto Manual with each order. Kit treats all cars and trucks.**
**$6.95 Postpaid (or send $1 deposit, bal. C.O.D.)**

YESTERDAY—SCIENCE FICTION
TODAY—ASTOUNDING REALITY!
A NEW SCIENTIFIC DISCOVERY

LEARN WHILE YOU SLEEP

# DORMIPHONE

Now, for the first time, it is possible for you to be taught *how* to sleep as well as taught *while* you sleep! . . . New scientific sleep-inducing guidance helps put you soundly to sleep in minutes! Imagine learning a new language, a role in a play, a speech, tables, formulas, while asleep! Scientists, actors, lecturers, students, psychologists prove DORMIPHONE can help do this.

*Brain in concentrated thought.*

*Brain in relaxation.*

*Brain while person sleeps.*

**FIND OUT ABOUT DORMIPHONE**

Controlled scientific experiments have demonstrated that part of your sleeping brain stays awake, hears and remembers during sleep—that anything can be memorized in less time with the aid of DORMIPHONE. Now it is ready to turn the hours you waste sleeping into useful learning time.

**FREE Book**

Investigate at once. Write Today for FREE Booklet on Dormiphonics. Dormiphone, Modernophone, Inc., 262-02 RCA Building, New York 20, N. Y.

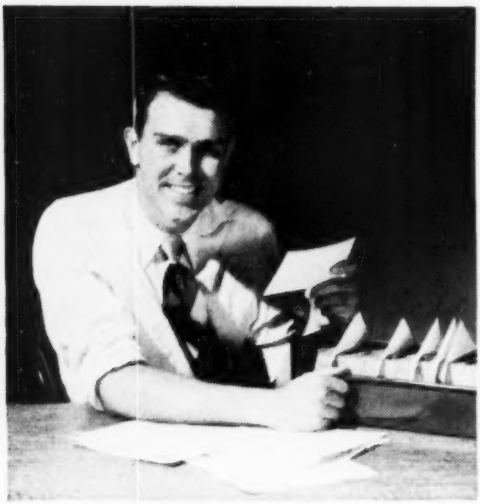
# Start a profitable manufacturing business in spare time

## with your own home as your headquarters



RIGHT at this moment there is a tremendous demand for new business enterprises in a branch of the plastics industry. Fortunately, this is a type of manufacturing business that does not require heavy or expensive machinery, rented space for storage, production or sales. A portable hand machine does the work wherever electric current is available, and the working area can be in almost any part of your home.

The opportunity that is open to you today, is to meet this growing demand in a new industry by establishing yourself as the manufacturing agent in your own trading area. Several hundred of our machines are already in use in both large and small communities. Some are even being operated successfully by women whose family duties make it necessary for them to be at home during the day, but whose family income is not enough to meet rising expenses. Most are being operated by men. Many started in spare time just to pick up an extra five or ten dollars for an evening's work. They found the work so profitable that some have now given up former jobs to devote full time to a business of their own.

One of our manufacturers gets all of his business by mail. Orders and money come to him in envelopes and he sends his products out the same way. Another delivers his entire output to stores in the vicinity. Another does a wholesale business supplying other manufacturers who do the selling. Still another works with advertisers in the manufacture of plastic advertising novelties and specialties.

The operation of the machine is simple and easy for anyone to learn. It does not require any knowledge of chemistry, mechanics, or electricity. And what some say is best of all, a manufacturing business like this enables a person to make good money without any house to house canvassing. The machine turns out from $5.00 to $15.00 worth of work per hour and it can be operated for as short or long a time as you wish.

We have prepared a simple step by step instruction manual that not only tells how to operate the machine, but also tells how to get the business coming in at a profitable clip right from the start. We will lend a copy of this book to any serious minded man or woman with the understanding that a copy will be given them free if and when they purchase a machine—or the copy we lend can be returned if you decide not to go into the business. Reading it will not cost you anything.

If you are interested in a nice little home business that can bring in an extra $60 or more for ten or twelve hours work in spare time, send your name. All information on the book and machine will be sent free, postage prepaid and no salesman will call to bother you. You read about it in the privacy of your own home without outside pressure and then decide whether you'd like to take the next step. Address your envelope to me in person. Send me the coupon below. Or, if you prefer send your name on a post card and ask for "Free information on starting a manufacturing business at home." Either way, send your name today and find out about this wonderful new fast growing money-making business.

**RAYMOND E. BRANDELL**
**1512 Jarvis Ave., Dept. L-9-B, Chicago 26, Ill.**

**Raymond E. Brandell, 1512 Jarvis Ave., Dept. L-9-B, Chicago 26, Ill.**

Dear Mr. Brandell: Please send information showing how I can start a profitable manufacturing business in my home in spare time. All the information you send will be mailed to me free of charge and no salesman is to call on me. I am not under any obligation to go ahead with the business and there is no charge for this information now or any other time.

# Last Week I Made $259.92

RAY BARTA

**with Science's New Midget Miracle, PRESTO Fire Extinguisher**

**So reports RAY BARTA of Wisconsin. Many others "cleaning up"—so can YOU!**

Science's New Midget Miracle "PRESTO"

AMAZING **new kind** of fire extinguisher. Tiny "Presto" (about size of a flashlight!) does job of bulky extinguishers that cost 4 times as much, are 8 times as heavy. Ends fires fast as 2 seconds. Fits in palm of hand. Never corrodes. **Guaranteed for 20 years!** Sells for only $3.98!

Show it to civil defense workers, owners of homes, cars, boats, farms, etc., and to stores for re-sale—make good income. H. J. Kerr reports $20 a day, C. Kama, $1,000 a month. Write for FREE Sales Kit. No obligation. MERLITE INDUSTRIES, Dept. 112, 114 East 32nd St., New York 16, N. Y. *IN CANADA: Mopa Co., Ltd., 371 Dowd St., Montreal 1, P.Q.* **(If you want a regular Presto to use as a demonstrator, send $2.50. Money back if you wish.)**

# Don't let a premature "SPARE TIRE" make you look old!

Many a hard-working man develops a "pot" and looks old *before his time.* Not because he's truly fat or because of middle age. The reason is—his back and stomach muscles are constantly strained and tired and no longer support him properly. If that's your trouble, you can . . .

**Look trimmer instantly!**

Bracer Supporter Belt is the answer. Not a girdle or abdominal belt, Bracer is a *man's* garment. Supports back and stomach muscles firmly, healthfully. Helps pull your stomach back to its *natural* position. Lets you stand straighter, taller. And helps you . . .

**Feel better, too!**

Bracer takes the strain off overworked muscles, helps you work better, feel less tired. Bracer is made of cool, elastic cotton. Tube-weave leg straps can't curl or bind. Attached or detachable pouch models—each with convenient fly front. $3.95 and up at drug, men's wear, surgical supply stores. Get your Bracer today!

**FREE BOOKLET** For additional facts, write today for free booklet, "What a Man Needs to Feel Better, Look Better," Bauer & Black, 309 W. Jackson Blvd., Chicago 6, Ill., Dept. PS-2

## EXTRA FLASH THAT GETS THE BIG ONES—
# HAWAIIAN WIGGLER #2
### WITH THE NEW WEEDGUARD SPINNERS

"The old No. 2 Hawaiian has been my favorite for years," says R. L. "Bob" Farrow, Monroe, La. "but the new model with the weedguard spinners is really a world-beater. It dug this 26-lb. string of Largemouths out of the weeds, brush and stumps of Black Bayou Lake in short order. The biggest weighed 5-1/4 lbs." Casting size only, choice 4 colors $1.25 each. Also available without weedguard spinners, $1.15 each.

# RCA High Fidelity brings you every musical note!

**RCA Victor High Fidelity** is the result of a half century of leadership in recorded music, in phonograph research and in the development of radio and motion picture sound equipment. It is a great new dimension in sound created by the perfect union of recorded music and the phonograph.

A genuine high fidelity instrument re-creates the full range of tones and overtones of the original composition—exactly as the composer intended.

"Victrola"® phonographs, Victor records, and "intermatched" high fidelity equipments for those who want to assemble their own units—all are designed to work perfectly together to bring all of the brilliance of the original performance into the home.

The nation-wide interest in high fidelity reflects the public's growing taste for the highest quality in recorded and broadcast music. Developments by RCA scientists and engineers now make it possible for you to enjoy this new musical experience.

Here's why the selection of Champion Spark Plugs by every major airlines is important to you.

They buy Champions because the airlines' own laboratory and flight tests prove Champions superior to all other aviation spark plugs. The same engineering, research and manufacturing skills that produce the world's best aircraft spark plugs produce the Champion Spark Plugs for your car.

That's why when you buy Champions you get spark plugs that combine peak performance and top dependability with maximum operating economy.

See your nearby garage or service station for Champions specially engineered for your car.

# Conveyor Belts to Move Crowds

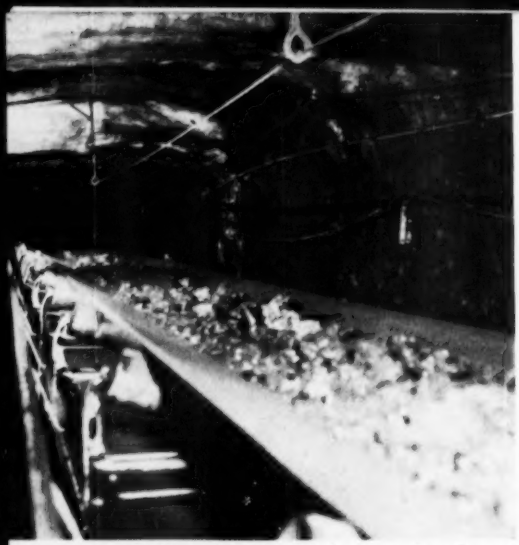
*Motorized sidewalks will be a boon to pedestrians and they will speed up the flow of rush-hour traffic.*

AT THE ripe age of 63 years, rubber conveyor belts will soon be carrying people. Everything from coal to cabbage heads has ridden millions of miles on belts since the world's first heavy-duty belt was introduced to industry in 1891.

This spring, thousands of New York businessmen who live in New Jersey will step aboard a belt twice a day to save their time and energy. It will operate like the 10-mile-long system that carried 12 million tons of aggregate to help build California's Shasta Dam in 1940 and the five-inch-wide, 25-foot-long ribbon that transports face powder in a cosmetics factory. But it will be called a Speedwalk, and its passengers will be free to stand or walk while riding its 227 feet.

The Hudson and Manhattan Railroad, which runs trains to and fro beneath the Hudson River separating New York from New Jersey, is installing a Speedwalk. It will connect the platforms where passengers board H & M trains with the Erie Railroad terminal in Jersey City.

This belt will be in a tunnel through which 14,000 persons per hour race twice a day. The Speedwalk is expected almost



**FOR BULK MATERIALS,** such as coal and ore: Spilling is prevented by using idler rollers set at an angle to shape the conveyor belt into a trough while also supporting it.

to double the tunnel's present capacity.

The belt, made by Goodyear, will be a 6½-foot-wide strip of thick, three-ply canvas impregnated with a compound of synthetic and natural rubber. It will be driven by a 20-horsepower motor at a speed of 1½ miles per hour. For 127 of the 227 feet that it will extend, it will carry passengers up a 10-percent grade.

Handrails will move at the same speed as the belt. Passengers will step on and off as if it were an escalator, and the belt will move in whichever direction the traffic is heavier. Paralleling it will be a walkway for those going in the opposite direction and timid souls who shy away from labor-saving machinery.

### *Belt Would Replace Shuttle*

This aid to modern commuting is being built by the Stephens-Adamson Mfg. Co., and installing it will cost about $75,000. Two more Speedwalks, extending 350 feet farther, may be added later.

Both New York City and Cincinnati are seriously considering plans for solving traffic problems with similar conveyor belts. In New York, a four-block-long system extending from Times Square to Grand Central Station has been proposed. This would take the place of overcrowded subway trains that now clatter back and forth over a so-called "shuttle" line. And in downtown Cincinnati, a two-way subway belt-conveyor loop has been proposed to uncork bottlenecks in a six-block-long and three-block-wide area.

Venturesome visitors to the Columbian

Exposition in Chicago rode on a somewhat similar moving platform in 1893. It was a chain-driven wooden device that "was always getting out of order." But Thomas Edison had set up a crude belt-conveyor system to carry ore in a New Jersey mine three years previously, which was a forerunner of things to come.

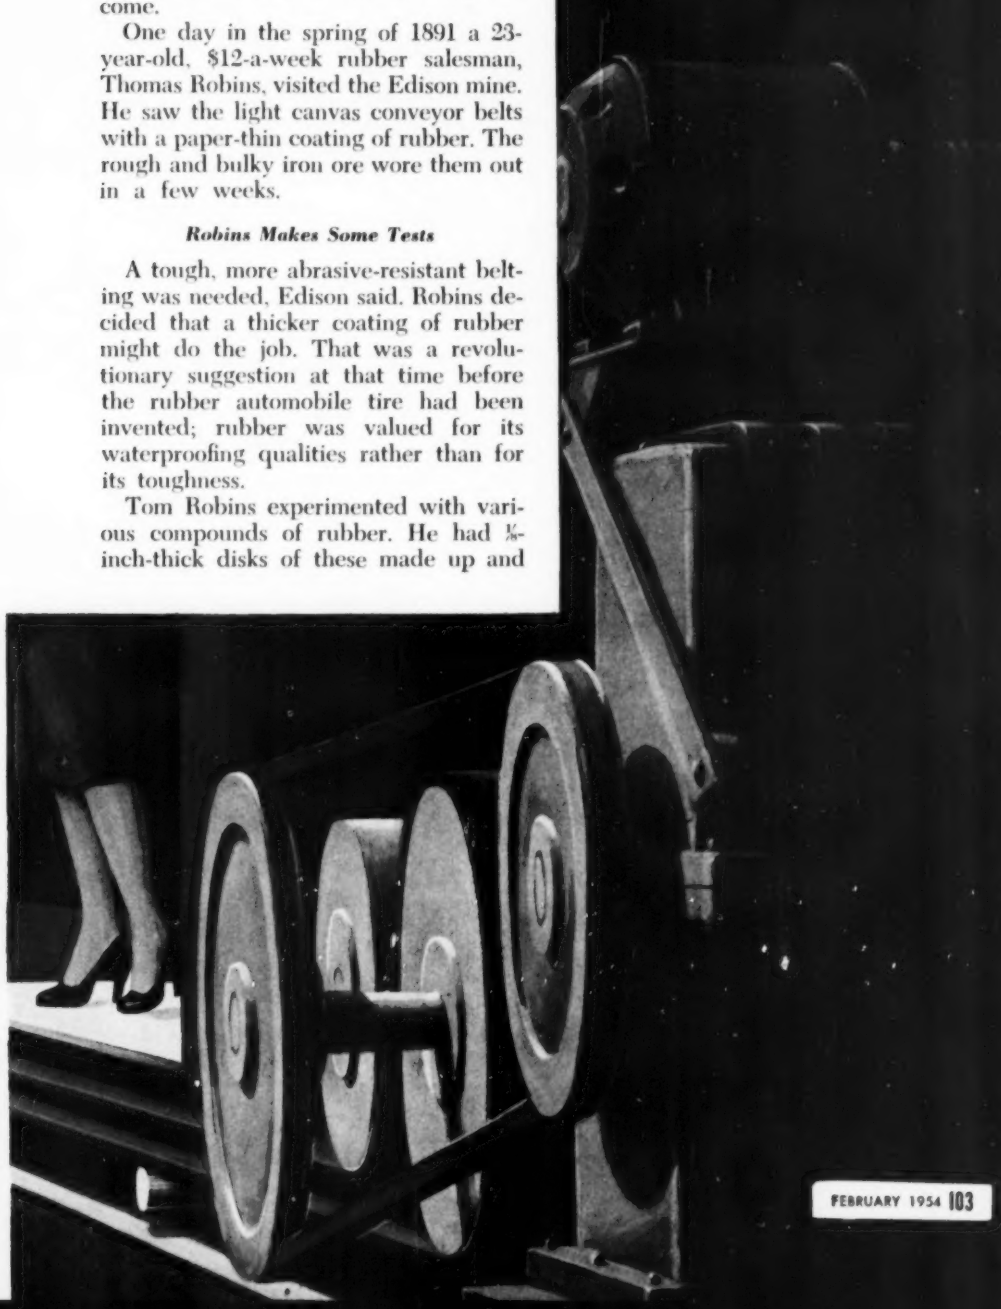
One day in the spring of 1891 a 23-year-old, $12-a-week rubber salesman, Thomas Robins, visited the Edison mine. He saw the light canvas conveyor belts with a paper-thin coating of rubber. The rough and bulky iron ore wore them out in a few weeks.

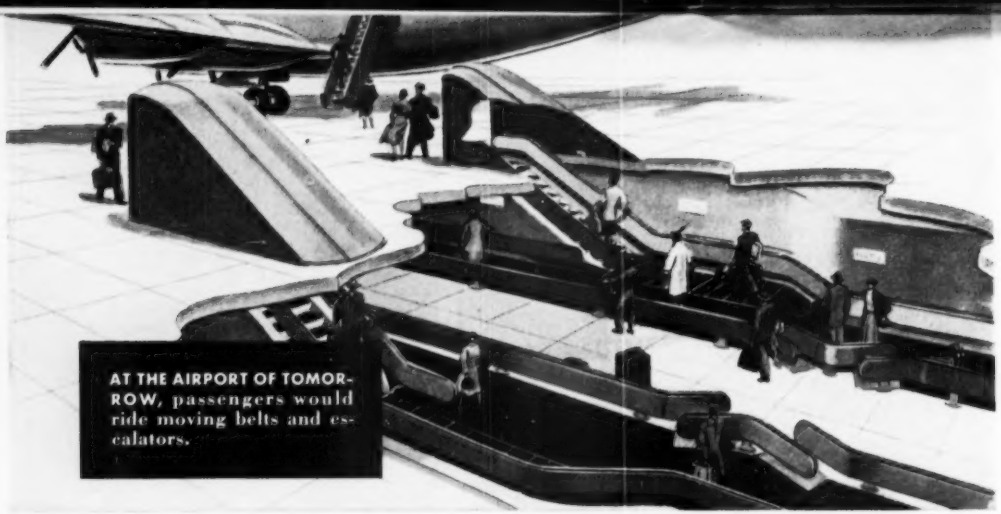
### *Robins Makes Some Tests*

A tough, more abrasive-resistant belting was needed, Edison said. Robins decided that a thicker coating of rubber might do the job. That was a revolutionary suggestion at that time before the rubber automobile tire had been invented; rubber was valued for its waterproofing qualities rather than for its toughness.

Tom Robins experimented with various compounds of rubber. He had ⅝-inch-thick disks of these made up and

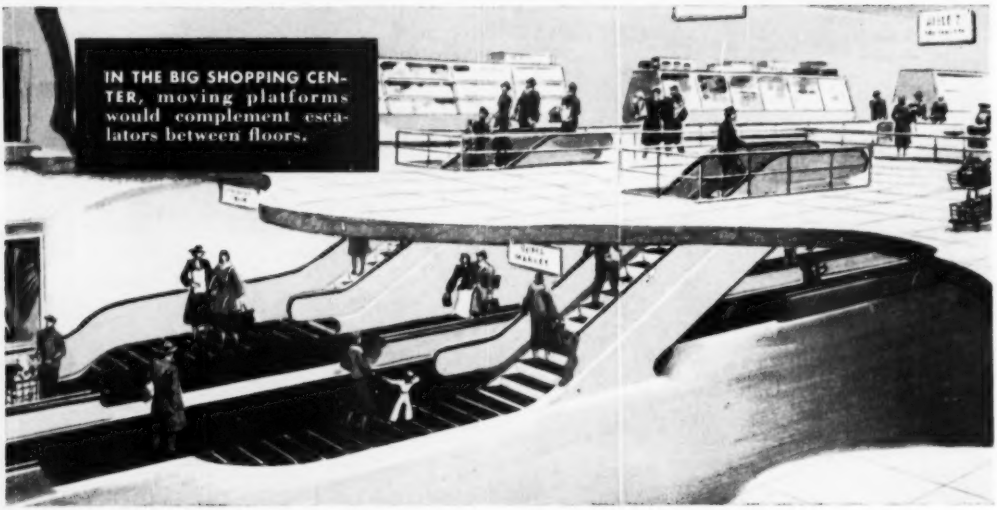
**FOR PEOPLE:** World's first moving sidewalk, shown in sketch below, soon will be in operation in an underground passageway connecting two commuter stations in Jersey City, N. J. Moving at a speed of 1½ miles an hour, the Speedwalk belt conveyor is expected to double the tunnel's present daily rush-hour capacity of 14,000 passengers.





**AT THE AIRPORT OF TOMORROW,** passengers would ride moving belts and escalators.

**IN THE RAILROAD STATION,** Speedwalks would have short access and exit belts as shown here.



**IN THE BIG SHOPPING CENTER,** moving platforms would complement escalators between floors.

rigged them at the end of one of Edison's belts, which he speeded up so that they were struck by a continuous torrent of ore. He added a steel disk for comparison.

After subjecting his samples to this grueling test day after day, week after week, he came up with a rubber compound that was hardly worn by the time the steel disk had almost disintegrated. That compound became the covering for the world's first industrial conveyor belting and was the beginning of a system of continuous mass-materials handling without which today's big industry would be about helpless.

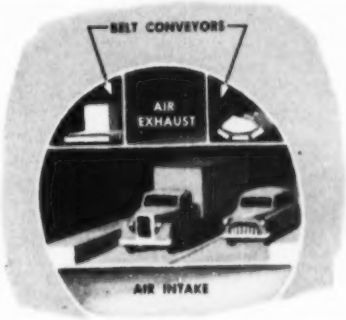
### *Mountain Is Belted into Puget Sound*

Belt conveyors actually have moved a mountain—or what seemed a mountain to the residents of Seattle. It was Denny Hill, right in the heart of the business district. All traffic had to go around it. For decades it was nibbled at, with dirt carried away in trucks. Finally, the city fathers realized that they weren't getting anywhere and installed a system of belt conveyors that spanned the streets. In about a year, three 3,000-foot conveyors moved 6,000,000 yards of rock and earth to barges that dumped it in Puget Sound.

That was in 1928-29. Shortly after that came the era of big-dam building in this country. Without belt conveyors, Grand Coulee, Norris, Shasta, Friant, Anderson Ranch, Hungry Horse and Bull Shoals Dams might never have been built.

What is claimed to be the longest overland system is being installed near Rockland, Tex., to carry lignite, a low-grade iron ore, four miles from the mine to a power plant of Alcoa. Operated by 950 horsepower, generated by eight motors, it will carry 1,000 tons of ore an hour at a speed of 550 feet a minute.

Perhaps the greatest advance since Tom Robins developed his conveyor belt has been the steel-carcass belt which has steel wire or cable embedded in the rubber-impregnated belting. This development, because of its strength, has made possible the construction of longer single flights—such as the world's longest single belt of more than two miles installed in 1949 by Goodyear at the Weirton mine in West Virginia.



**Belt Conveyor Proposed for Tunnel**

**A pair of belt conveyors** could be run on each side of the air-exhaust duct along the upper part of the new third tube of the 7,944-foot-long Lincoln vehicular tunnel under the Hudson River. Huge trailer trucks could unload bulk and packaged materials onto these moving endless belts at the New Jersey entrance, thus keeping many trucks out of the tunnel and off New York City's already traffic-strangled streets.

One of the most ambitious projects for belt conveyors is a two-way elevated system running 103 miles between Lake Erie and an Ohio River terminal. This Riverlake Belt Conveyor is now under consideration by the Ohio state legislature. With 172 belts, or flights, some of them more than a mile long, it could carry 52,000,000 tons a year, transporting iron ore south from the lake and coal north from the river.

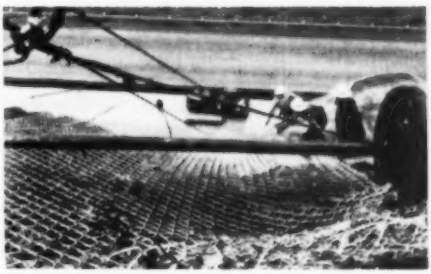
### *Will Belts Supplant Highways?*

What the belt-conveyor industry has done for materials, it stands ready and eager to do for people. To what extent we will become riders of moving walkways only time will tell. But one writer of science fiction has predicted moving highways for us. Perhaps huge conveyor belts will bring the day when you will use the auto-propulsion of your car only to maneuver on and off a network of fast-moving superthruways.—*Herbert O. Johansen.*

## New Paint Job Means: Beware!

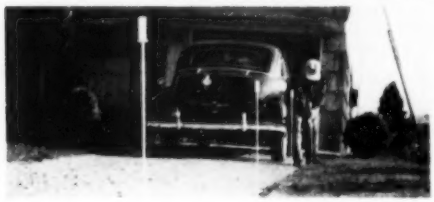
THE peppermint-stick nose and boom of this F-86D Sabrejet test plane warns away other traffic at Edwards Air Force Base, Calif. The telescope-like head on the boom registers air speeds; the vanes measure aerodynamic behavior of the 650-mile-an-hour-plus, all-weather interceptor.

## Giant Spider Web of Wire Heads Off Rock Slides

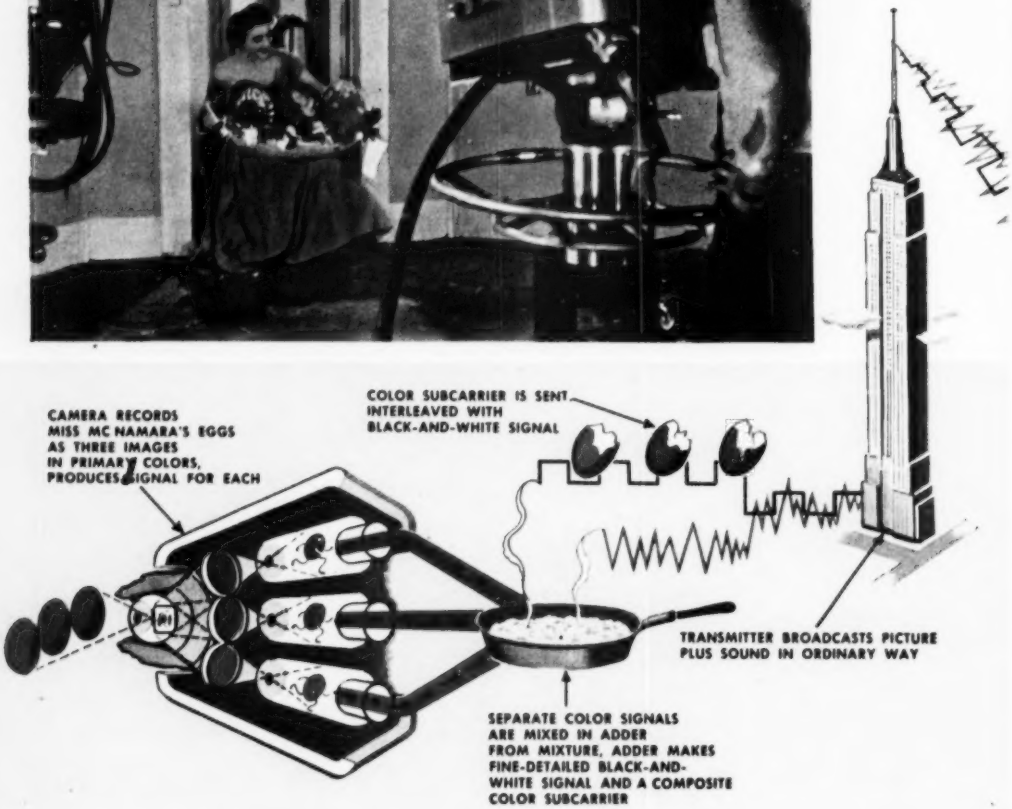


To KEEP rocks from bouncing onto this four-lane highway near Kelso, Wash., engineers threw a 2,700-foot wire-mesh veil over the face of the slope. A truck-mounted American Hoist Co. unit raised the net 170 feet to the top of the cut while a strongback on wheels (right) kept the 12-foot-wide mesh strips from catching on projections.

## Night-Glowing Beacons for Motorists Mark Edge of Driveway



IF YOU have trouble sighting the edge of your driveway at night, these reflector-topped aluminum stakes may be the answer. The Scotchlite marker is said to be visible from any angle when your headlights are on. The D & G Products Co., 2796 Woodhill Road, Cleveland, also makes screw-in Drive-Glos for use on buildings, fences and posts.



IT LOOKS like the hard way, but scrambling colors and then unscrambling them makes possible the new color TV that at last satisfies everybody.

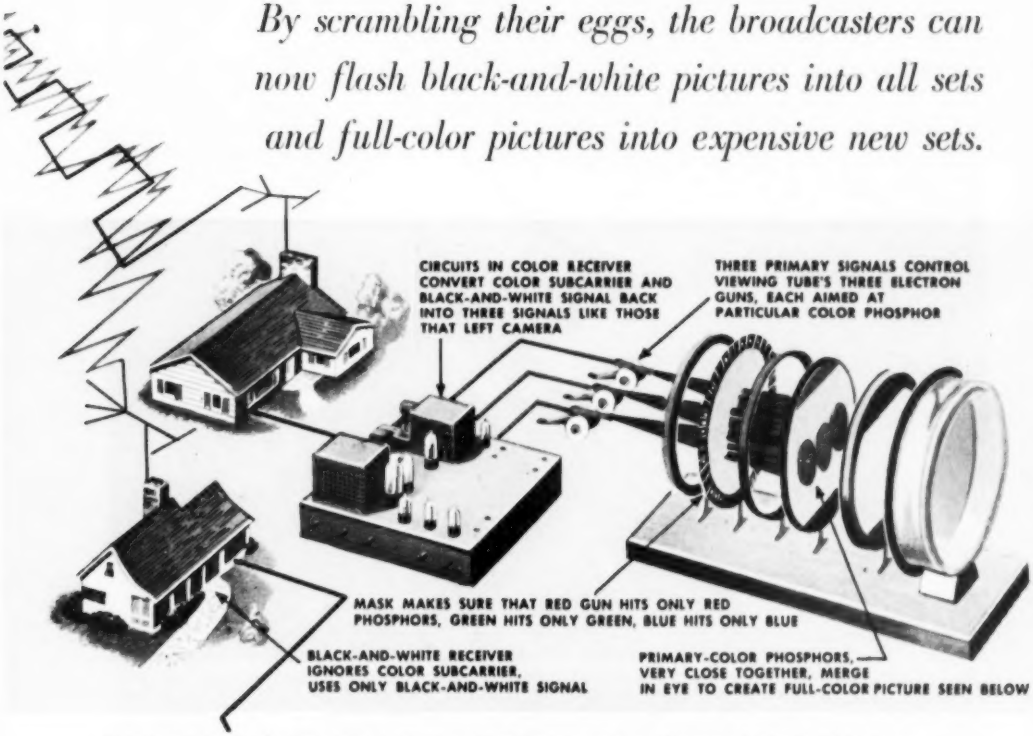
The big color-TV cameras take three pictures, one for each primary color. These are mixed to give a black-and-white picture signal and a separate "subcarrier" of color signals. Color receivers use the subcarrier to convert the black-and-white signal back into the three primary-color pictures, which overlap on the color screen and are fused by the eye into full, natural color. Regular receivers ignore the color subcarrier and display the picture in ordinary monochrome.

Recent discoveries in science led to this compatible color inside a regular TV channel. Eye researchers found that a natural picture needed only a little color if fine detail appeared in black-and-white. Communications theorists found room for bursts of color information in the crowded TV channel.

Color receivers should be available by Easter. Cost: $800 up. Worth it? Well, look at the unretouched full-color photos on these pages—one shot in the studio, the other off the screen of a color receiver.—*Martin Mann.*

# How They Crowd Colors into TV Channels

*By scrambling their eggs, the broadcasters can now flash black-and-white pictures into all sets and full-color pictures into expensive new sets.*



**COLOR QUALITY IS REVEALED** in PSM's simultaneous color photos of Marie McNamara, NBC's Miss Color TV. Facing page shows studio scene; shot at right records image on a color-TV screen. Below is what you would see on a black-and-white receiver.

**READY FOR HEAVY TRAFFIC,** the new Venezuelan highway (top photo) quickly links the country's busiest seaport and airport with its capital. Telephone cables run under the center strip.

The biggest bridge on the *Autopista* (left) is near the Carácas end of the route. Ninety-six percent prestressed concrete, four percent steel, it was built by a French firm.

*Slicing through the Andes at $6,000,000 a mile, new road is*

# World's Costliest Highway

NO LONGER does the main highway from the Caribbean shore to Carácas, Venezuela's mountain-circled capital, wiggle for 19 miles around 365 curves, labor up 12-percent grades and take frightened travelers more than an hour to drive.

In December, the *Autopista*, a shining new superhighway, took its place. Begun three years ago, the *Autopista* (meaning "auto track," or speedway) cost $6,000,000 a mile, which makes it the world's most expensive road. But it has shortened the route to Carácas to 10½ miles—a 15-minute run. It has only 36 curves, all of them wide and gentle, and its steepest climb is an easy six-percent slope. It is a toll road, and the government expects it to pay for itself in about 20 years.

The *Autopista*, lighted at night from one end to the other, is a four-lane, divided highway of concrete, topped with a two-inch cushion of asphalt. It runs through magnificent mountain country. Along the road's 164-yard right of way, moreover, the

**GONE ARE THE WIGGLES** that used to mark the road from the sea to Venezuela's capital. The broad new route has lopped off 329 curves, is eight and a half miles shorter than the old.

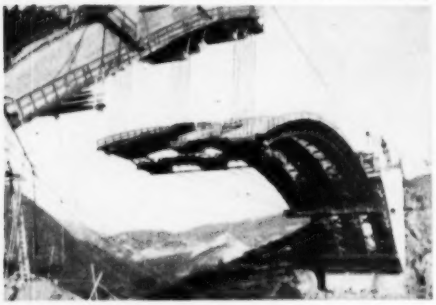
**TORTUOUS PAST** is recalled by this view of the crooked road that the *Autopista* has supplanted. It was a slow, dizzying route, over which 6,000 cars and trucks crawled each day.

**SLICING AWAY MOUNTAINS** to fill awesome gaps in the terrain was a huge, costly and gymnastic job for the road builders. Depth of the gaps ranged from 78 to 141 feet.

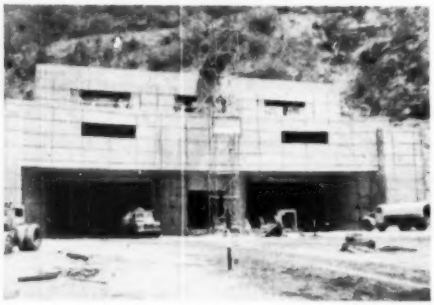
Venezuelans plan to add a few embellishments to its natural beauty. They are setting out plants and shrubs, both for adornment and to prevent soil erosion.

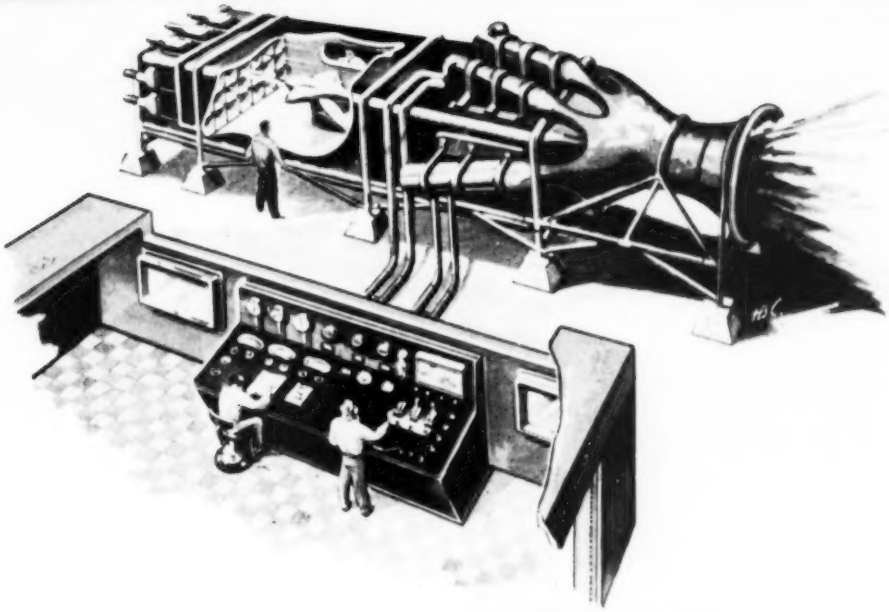
Piercing 6,000-foot peaks, the *Autopista* passes through two giant, well-ventilated tunnels, one of which is more than a mile long, and crosses the three largest prestressed concrete bridges ever built.

**HOISTING THE MIDDLE SPAN** of one of the *Autopista's* three prestressed concrete bridges.



**MORE THAN A MILE LONG,** this tunnel leaves 39 feet of rock between dual lanes of traffic.





## Rockets to Suck Air Through 1,000-M.P.H. Wind Tunnel

ROCKET motors may be put to work powering a wind tunnel capable of producing gales up to 1,000 m.p.h. at pressures equivalent to altitudes up to 60,000 feet. As envisaged by University of California engineers, the exhaust from six rocket-engine thrust chambers would power jet pumps arranged to suck air through the tunnel. A conical plug would act as a throttle, changing the volume of air as desired. The designers figure the rocket tunnel could be built for $250,000.

## Mulberry Now *Stops* an Invasion

FOUR huge concrete caissons—each as high as a seven-story building—have closed the breach in Holland's dikes, smashed by last year's floods. The last one is shown being nosed into position. All were built in Britain for use in the Normandy invasion as part of an artificial port dubbed Mulberry.

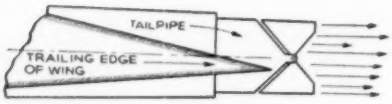
## Mixer Makes Water Wetter

A FIRE-FIGHTING chemical to make water wetter by breaking up thick-skinned drops now comes in cartridge form. Inserted in a blender, it is fed to the hose stream automatically. The maker, Aquadyne Corp. of New York, says the treated water will penetrate the most stubborn blaze.

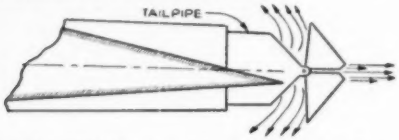
## Scooter Speeds Ramp to Planes

MIDGET gas buggies do a lot of odd jobs in Italy. Here a scooter has been harnessed to a Rome airport passenger ramp. It saves not only time, but manpower too, as just one assistant is needed to guide the driver to the plane's loading door.

# Reverse Thrust to Brake Jet Airliner For Short Stops



**NORMAL THRUST:** rear of tailpipe is split into two hinged sections. When closed in flight, all exhaust gases go rearward.



**REVERSE THRUST:** opening sections, as above, cuts down rearward exhaust, reversing 40 percent of thrust for braking on ground.

A DEVICE in the tailpipe of a proposed jet airliner would provide reverse thrust and is expected to shorten its landing run from 2,500 feet to about 1,400.

The Fairchild M-186 is being offered, in

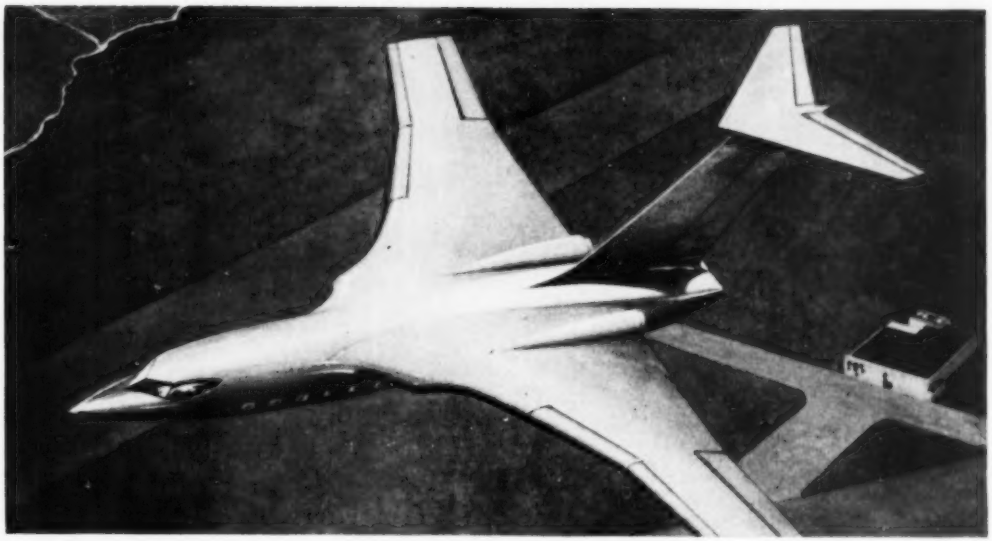
## Tape to Record Both Color and Black-and-White TV Programs

BOTH the sight and the sound of color-television programs can be recorded on ordinary half-inch magnetic tape by electronic equipment, now under development by RCA. The system provides for immediate playback. RCA's Brig. Gen. David Sarnoff, shown holding the tape, sees the development as a major step into an era of "electronic photography" where television cameras will replace present-day movie cameras, and tape will replace film for both commercial and home movies.

The equipment can make video recordings either from the output of a television camera or a television receiver. For color, the tape, moving at 30 feet a second, is drawn across five electromagnet recording heads that record five channels of information: red, green and blue color signals, a synchronization signal and the sound signal. For black-and-white, only two channels, one for video and synchronization and another for sound, are impressed on quarter-inch tape.

For playback, the rewound tape is drawn across similar reproducing heads. The tape can be wiped clean and re-used.

RCA engineers expect to have the equipment ready for commercial use in about two years.



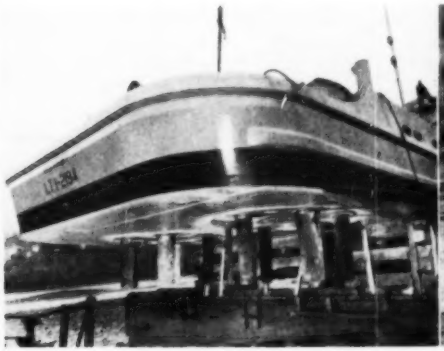
the drawing-board stage, to U.S. airlines as a fast, twin-engine jet liner and cargo plane for one-stop transcontinental flights. Two Wright J-67 engines, each with a thrust of 12,000 pounds, would enable it to cruise at 570 miles an hour at altitudes above 40,000 feet.

The plane has a high "cusp" wing (a combination of delta and straight wings), a towering horizontal tail and rear-of-fuselage loading. A side-bubble canopy would give pilots added visibility. A 44- and a 64-passenger version have been designed. Provisions are made for a quick conversion to military use for carrying troops or cargo, and for dropping paratroops.

## Army's First Rudderless River Towboat Makes Fancy Turns

TWELVE spinning, four-and-a-half-foot metal blades, projecting downward into the water, are both propellers and rudder of an experimental Army towboat. It is seen at lower right turning in its own length during a recent demonstration on the Ohio River near Pittsburgh. Steering is done by changing the pitch of the blades, shown below.

Each propeller unit of six blades is turned by an 11-foot rotor sunk in a well in the stern of the boat. The rotors are driven through shafts from two 12-cylinder, 1,000-horsepower diesels. Aside from the advantages of extreme maneuverability and increased power over comparable screw-type units, the vertical-axis propeller-rudder blades can be changed without putting the craft in drydock.



## King-Size Motorcycle Clocks in at a Royal 130 M.P.H.

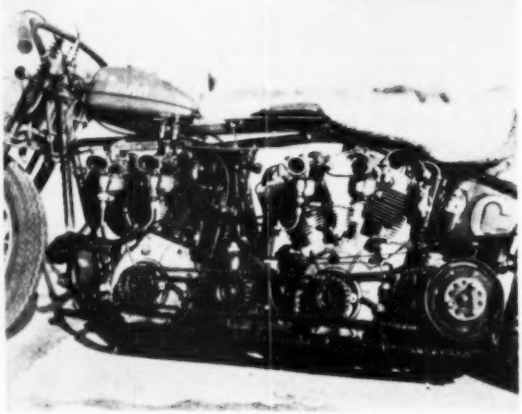
Two tandem engines drive this massive job along at a roaring 130 m.p.h. Nicknamed the "Monster" by its builder, 26-year-old Bob Schmitt of Chalmers, Ind., the four-cylinder motorcycle was made from parts of two Harley-Davidsons, a John Deere tractor, and some beer cans (for carburetor intake shields).

Bellied down on an elongated saddle to cut wind resistance, Schmitt guides his super-cycle with handle-bar controls, keeps himself aboard by jamming his feet against the rear transverse braces (upper right).

Original engine power was jacked up by installing Chet Herbert cams and reaming out piston displacement from 61 to 80 cubic inches. New compression ratio is 12:1. Methanol sucked in through dual carburetors supplies the fuel. The plump rear wheel is driven through a complex chain rig (lower right).

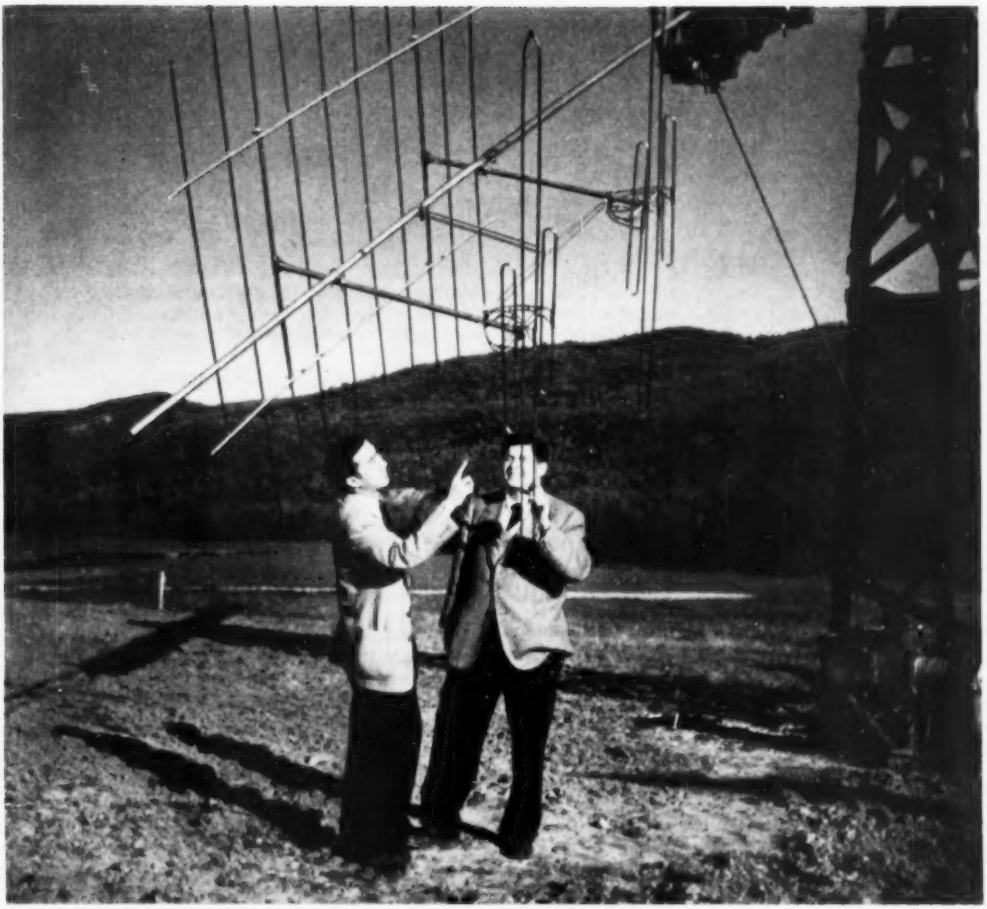
Because of its gearing, the Monster takes an eighth of a mile to get up to 80 m.p.h., another eighth to reach top speed: 129.87, clocked at Chicago's Maremont Speedway.

Schmitt drives 300 miles to Chicago each weekend during the racing season. Next year he's heading for the salt flats at Bonneville, Utah, where he figures he can *really* let her rip.



## Tiny Electronic Device Emits Timing Signal for Auto Races

PACKED into a tiny 4"-by-2" case and weighing in at one pound, a new Evans Engineering radio transmitter promises to eliminate human error from the timing of auto races. The raceway network calls for a transmitter, set on a different frequency for each car on which it is mounted (right); and a receiver, which clocks the signals as cars pass. At left, Indianapolis Speedway's Wilbur Shaw examines the receiver.



New Channel Master Champion antenna is inspected by its designer, Dr. Lo, and boss Resnick.

# TV Antennas Made Him Rich

***Television version of the better-mousetrap formula has built 29-year-old Joe Resnick a $12,000,000 business in six years.***

**By Herbert O. Johansen**

TEN years ago Joe Resnick's closest contact with the infant television industry had been an appearance as a guest on an audience-participation program. But experience as a radio operator was enough to get him a job as a junior engineer in a New York TV company at $32 a week. Last year his own company, the world's largest manufacturer of TV antennas, did a $12,000,000 business.

Today, at 29, Joe Resnick, although chairman of the Board of his Channel Master company, is more or less retired—enjoying his hobbies of photography,

*A farm boy brings bustling industry to his home town*

fishing, horseback riding and ceramics—and waiting to latch onto something new.

He has come a long way in a short time for a boy born on a truck farm, in the lower Catskills at Ellenville, New York, that raised rocks more readily than crops. Joe didn't finish high school. His technical education was meager. When he started his business, capital consisted of $7,000 his older brother, Lou, had made in the sauerkraut business, and $2,500 borrowed from a local grocer.

What was Joe's contribution? He answers the question himself: "I was in the right place, at the right time, with the right idea."

That idea was a preassembled TV antenna that could be installed quickly. As time went on, his antennas also became better engineered, mechanically and electronically, for better TV reception, especially in fringe areas. The recently announced Channel Master VHF tripole Champion is quite a step from Resnick's first antenna, which was copied from the pages of *The Radio Amateur's Handbook*.

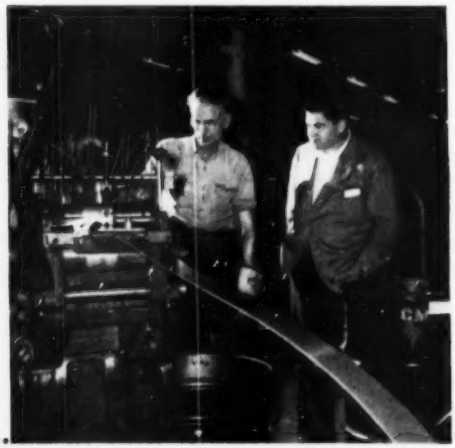
***Antenna Can Be Assembled in 90 Seconds***

Back of the Champion are some 90,000 measurements, two years of experimental work, $100,000 in research money. A new kind of antenna claimed to furnish the power of three separate antennas, the Champion can nevertheless be assembled, ready for the mast, in 90 seconds. It was designed by Dr. Yuen T. Lo, hired by Resnick because he is one of the few men who have written a doctoral thesis on the subject of television antennas.

The first 23 years of Joe Resnick's 29 years can hardly be held up as a blueprint for success. His career at Ellenville High School proved something of a disappointment to both Joe and his teachers. They parted company in the middle of his senior year, in 1942. Joe, in true "rags-to-riches" tradition, left the farm for the big city. In New York he enrolled in a course in radio fundamentals. When the military services rejected him on physical grounds, Joe joined the Merchant Marine as a radio operator and served on tramp freighters, mostly on the Atlantic run, until he received a medical discharge late in 1944.

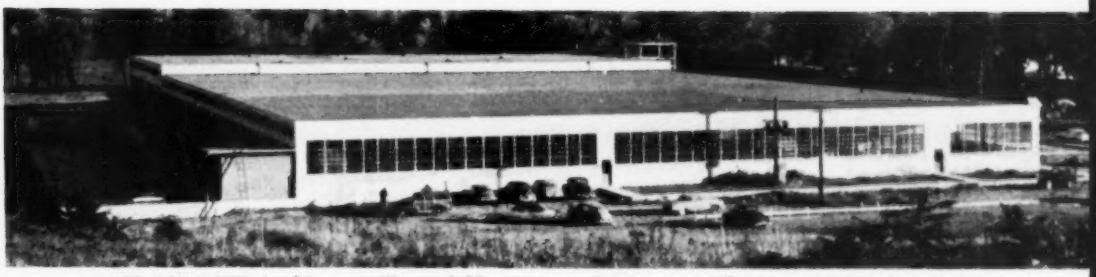
With manpower short at that time, Joe's radio-operator experience was ample to get him a job as a junior engineer at the Du Mont television company.

**FIRST preassembled TV antennas were made in this small Ellenville, N. Y., building the Resnick brothers rented for $40 a month.**



**ASSEMBLY-LINE production methods enable the Resnicks to turn out more than 2,500,000 preassembled antenna units a year. In 1953 400,000 pounds of aluminum were used.**

*Lab-developed designs keep automatic machines busy*



**JUST COMPLETED** is this new Channel Master plant, with 115,000 square feet of space. Equipment includes huge aluminum-extrusion press, specially designed drawbench and devices for testing all kinds of materials that go into making television antennas.

After a time, Joe shifted to the service division, where part of his job was installing antennas. These could be put together on the ground and the assembly carried aloft, with a good chance of bending or breaking the elements. Or, you could assemble them on the roof while clinging precariously to any handy support.

### *New Kind of Antenna Needed*

Surely there was need for some other kind of antenna. Joe filled the need by forming the Oak Ridge Antenna Co. Money came from some partners and $500 was taken from the sauerkraut till by an older brother, Harry (now president of Channel Master).

But business was only fair, and a disagreement developed among the partners. Most of them felt that the time was not far off when TV receivers, like radios, would not need big outdoor antennas. They wanted to put the firm's money into installation and servicing. Joe, however, believed that TV antennas were here to stay, so he pulled out.

He owed about $10,000, but a vague idea that had been bobbing around in the back of his head for some time was fast taking shape. He knew how to make a simple, practical, preassembled antenna —how to pivot the elements on fixed nuts, how to slide one tube into another and lock them.

Back in Ellenville, Joe, now 23, ex-

**AN ENGINEER** adjusts electronic equipment used in testing antenna performance. Joe Resnick, in background, hires top men to engineer antennas mechanically and electrically.

**LABORATORY** has its own VHF and UHF transmitters. Tower, resembling oil-drilling rig, has pivoted arm on which antennas are mounted and then raised for testing.

*Television-antenna tycoon enjoys life at home with his family*

**WITH TIME to ride his hobbies, Joe Resnick doesn't stray far from his new Sands Point, N. Y., home. Cabinet of hi-fi record player and radio is of his own design. His still and movie photography stars his wife Ruth, daughter Deborah, son Jeffrey. Lower photo shows Joe at kiln for baking ceramic tile.**

plained his big idea to his brother Lou. Lou liked it. They formed a company called Channel Master Corp., hired a mechanical engineer for $50 a week and began manufacturing the world's first preassembled TV antennas.

In those early days, Joe would don a business suit in the morning to go out selling antennas. When he got orders, he would rush back to the plant, change into work clothes and help build and package the antennas.

During the first year, Channel Master used 30,000 pounds of aluminum, turned out about 5,000 antennas, did a $75,000 business.

Last year, the sixth year of Joe Resnick's brain child, it used 400,000 pounds of aluminum, shipped some 2,500,000 preassembled antennas selling for $12,000,000.

Today about 1,000 employees are working in two plants, one a brand-new, sprawling structure with 115,000 square feet of space.

### *Staff Works Three Shifts*

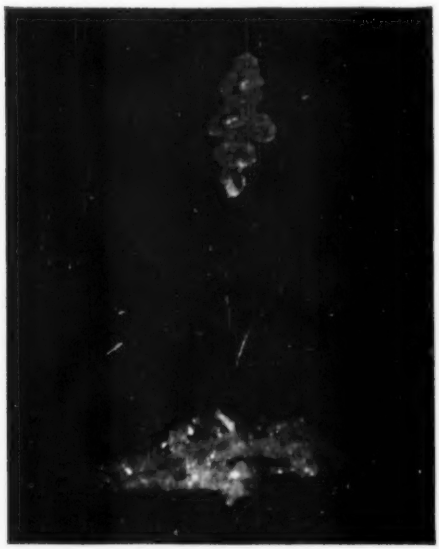
There is a laboratory staffed by 26 electronic engineers and technicians working on three shifts. It is located in the lowest part of the valley, almost a TV dead spot. With their own VHF and UHF transmitters for testing new antennas, this is an advantage because they can operate under controlled conditions with no outside interference.

The research-and-development laboratory is Joe Resnick's pride and joy. Although he is admittedly a promoter and salesman who can hire top technical talent, and does, he is a great booster of specialized training as a foundation for success.

He believes, for instance, that a young man planning to go into selling should first get a' thorough technical background in the business he expects to enter.

"If security is a prime consideration," he advises, "then by all means go with a big company. But if you are willing to gamble a few years, find yourself a place with some small, growing venture." END

**Tail Light** from the afterburner of a Navy Skyray illuminates the airport with a long tongue of yellow flame as the new triangle-wing fighter shows its power in ground tests. The boosting effect of the afterburner is expected to push jet fighters to 1½ times the speed of sound. The Skyray holds the present world's official speed record—753.4 miles per hour.



**Chemical "Flower"** blooms when three types of crystals of zinc sulfide are arranged on a black backdrop. The surrealistic gladiola above, as well as other imaginative blossoms, were created by Dr. W. W. Piper while studying crystals that light up in an electric field.

**Blue Chips** spew from tough steel as new lubricants are used for machine cutting. The splashings on the turret lathe below are water plus additives, chiefly sulfur and chlorine. These coat metal so tool won't weld to work. Standard Oil of California developed the new lubricants.

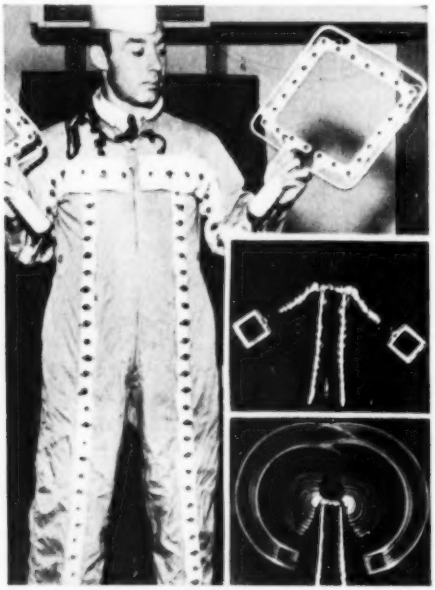
## Photographer Gets Tough Shot

How would you like to sit tight in the path of this flying boat while it thundered down on you over a watery runway? That's how John Gaydos got the striking shot above. Crouched in a speedboat, he and

**Flying Tiger (and Elephant, Too) Star in Siam Air Show**

When the Siamese want to make like Flying Tigers, they turn to helicopters. The photos above show how two copters were turned into aerial floats to amuse spectators at a Royal Thai Air Force show. The spinning rotors of a Hiller put the tiger in the air and a Westland Sikorsky gave the elephant wings. A third copter was parked on the roof of the airport's administration building with a doctor and a nurse standing by, but the whole show went off without a mishap. Even the animals never tangled.

the skipper waited like sitting ducks while the plane shot toward them over Chesapeake Bay. Gaydos clicked the shutter and the skipper veered the boat out of the way seconds before the Martin XP5M-1 took off.



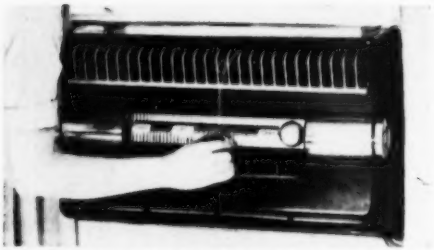
**Signalman Wears Homing Lights**

THIS landing officer is all lit up like a Christmas tree to signal returning planes safely aboard a carrier. Insets show how he looks at night when the tiny bulbs in suit and paddles are illuminated.

**Copter Serves as Lineman**

THIS Army copter sets up phone lines in mountains and jungles by toting poles vertically and dropping them into prepared holes (top photo). Then the H-25 flies sideways and drapes cable over the crossarms (center) by unreeling it from an open door. As fast as the aluminum poles are set, ground crews anchor them and linemen secure the cable to the crossarms.

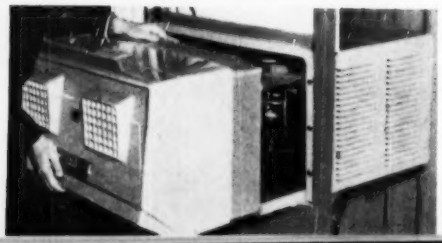
# Dear Bill: Here's what you want to know about the New Air Conditioners



**ROOM SPACE IS NO PROBLEM** with an air conditioner like this. It takes in and discharges air at the back, so it can be mounted flush with the inside wall, with drapes closing over it, or in any one of 18 positions.

**YOU CAN DIAL YOUR OWN WEATHER** on some of the new coolers, which have fancy control boards. You can cool, heat or dehumidify the room, exhaust stale air or blow in fresh.

**EASY TO INSTALL AND SERVICE,** the motor of this 1954 air conditioner slides in and out. The smallest units run on regular, 110-volt house current. The big ones take 220 volts and require a special circuit.



**About 1,500,000 American families are expected to invest in them this year.**

So you and Sarah will be in style.

I can give you a preview of the 1954 models because I've just gotten back from the big air-conditioning show in Cleveland. The manufacturers were showing all the things they're going to be pushing next summer.

Some of them were mighty interesting.

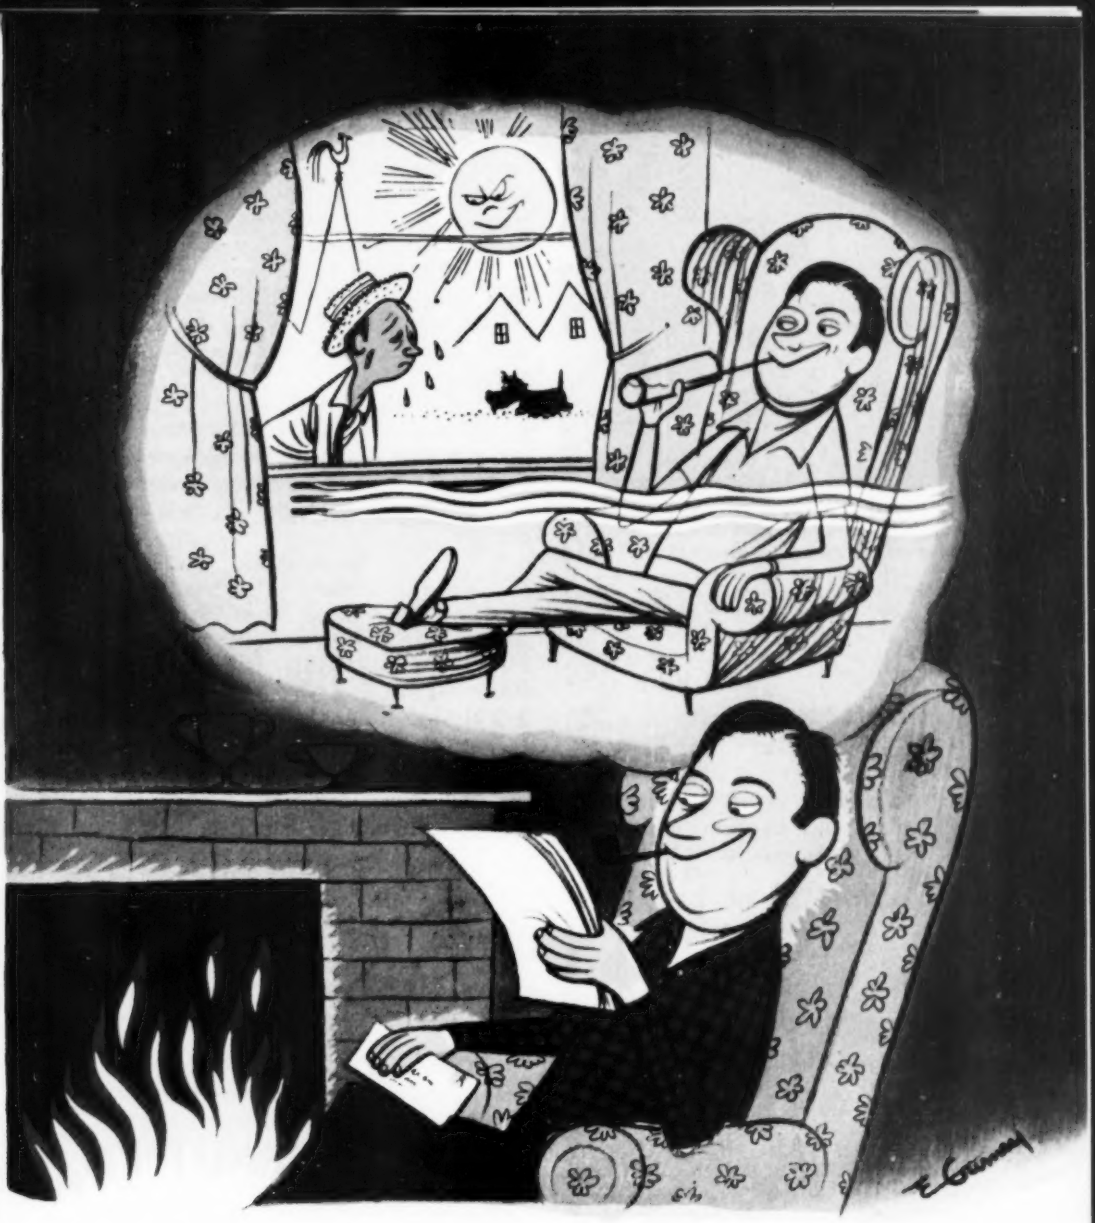
You know that previous room air conditioners have often been pretty noisy. Well, this year's window boxes have smaller, quieter motors. They have plastic or other sound-deadening cases. They have baffles between the motor and your room to keep things quiet. Some even stick out the window farther than ever, for the same reason.

### *Some Go into Reverse*

Heaters have been added inside a lot of them, Bill. Thus the air conditioner can warm as well as cool, and can take the chill off a room. Nice for late-spring mornings!

Sarah will be glad to know that a lot of the new models have their air scoops underneath instead of at the ends, so they can't suck in curtains and pull dirt through them like the old ones did.

Another word for Sarah: She asked me once how often to clean the air conditioner's filter. I found it should be vacuumed or shaken out once a month at least. But in a factory city, like yours, it ought to be done oftener.



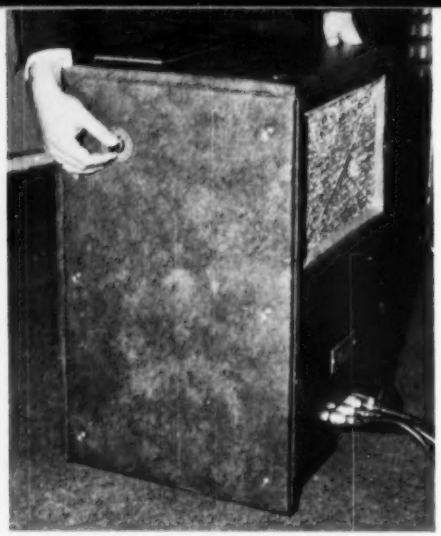
By the way, I saw a fancy gimmick on one window conditioner that puts an end to filter cleaning. It was a filter that works like a towel dispenser. You pull it down when it gets dirty and cut off the soiled section. In doing this, you have pulled a clean section into place.

Some of the new models have as many controls as an airplane, it seems. But my friend George Jones tells me you needn't worry about them. He says they're sort of like the controls on a new TV set—once you've learned how to tune in, you don't fiddle with them.

George is an old hand at air conditioning, so I asked him quite a few questions about it.

For instance, do you need insulation before you buy air conditioning?

No, he said, but it's like heating; it



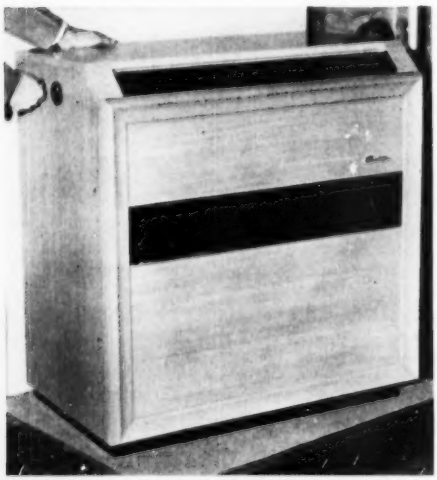
**AN AIR CONDITIONER ON WHEELS, this model can be rolled from room to room. But it must always be hooked up to a water supply as well as to electricity, and thus trails lines.**

costs less to operate if you have insulation.

What should you do before you install a room air conditioner?

Decide which room it's going in, George said. Some people prefer to cool the bedroom, some the living room, some an invalid's room, some the TV den, and so on.

Next thing, George said, is to estimate the size of air conditioner you need. (Your dealer should be able to help you there.) Then make sure your wiring will carry the extra load. Even a small room air conditioner is a bigger appliance than any you may own, except in the kitchen and basement. To play safe, have an experienced electrician test the circuit. Then, if you find it is really necessary, you can have a special circuit installed.



**A HANDSOME DISGUISE for one new cooler is this console, which stands on the floor. Other '54 models come in a wide range of colors, able to blend with nearly any scheme.**

It'll cost you about $7.50, maybe more, to have a window box installed. But why not put it in yourself? George says "it requires no brains, special knowledge or special tools." That ought to include you, old boy.

It involves erecting the braces or frames that hold the window box on the outside of the house, then lifting the air conditioner onto the sill. (You and I could do this easily; a window air conditioner weighs only 100 pounds or so.) It also involves fastening the window in a permanently closed position. Then you plug in your window box and you're all set.

It's lucky you have double-hung windows. They're the easiest to work with. If you had casements, you might have to remove a pane so your air conditioner could reach the outside air. Or you might have to get one of the air conditioners specially made for casements.

### *A Way Out of Window Troubles*

One neat solution to the problem that I ran across was a whole new, airtight window, with a place for an air conditioner in it, which you can buy and substitute for a casement or any other window.

Maintenance, you'll be glad to know, doesn't amount to much.

Window air conditioners used to be taken down in winter; now they can stay put the year around. You wipe off the unit with a damp cloth or wax it, then cover it with a weatherproof slip for the winter. The main thing is to keep the filter clean.

It's a good idea, too, to have the air-conditioning man check your unit

**IT LOOKS LIKE A FURNACE, but this heat pump can cool the whole house as well as warm it. Electric-powered, it costs $10 to $40 a month to run and is recommended for mild climates.**

**TOMORROW'S DUCTWORK for air conditioning will be cheaper and easier to put in than today's because of this new flexible tubing, which is not yet available for homes.**

once a year, just as you have your furnace looked at.

I realize that there's a pretty good hot-water heating system in your house. That's why I've assumed that you would add single-room air conditioners. If you were going to rip out your old furnace, radiators and pipes, I would have suggested your getting a year-around air conditioner—a central station replacing the furnace. You'd have to install new ductwork, but then you'd have the kind of air conditioning they're putting into new homes (PSM, March '53, p. 152). Incidentally, you can even buy central air conditioning with prefabricated houses this year. Four of the biggest U. S. prefab manufacturers are providing it, for from $600 to $1,200 a house.

### *People with an Inside Track*

People who already have warm-air heating in their homes have a problem that's different from yours. If they have a blower, chances are they need only to add a cooling unit to the present furnace. If they have no blower, they probably will add blower, cooling unit and bigger ducts (cool air requires larger ducts than warm air). Then they will have central air conditioning that will cool the whole house.

Another thing that cools the whole house from one spot in the basement or garage is what is called a heat pump.

Heat pumps, run by electricity, are refrigeration systems that during the winter extract heat from the outside air, a well, lake or from the ground, and in summer reverse the procedure, passing heat into any of these, thereby cooling the house. Heat pumps are generally most satisfactory in mild climates.

### *One Taste and You're a Goner*

So far, I learned, there are only about 1,000 heat pumps in the U. S. But some experts see in them an answer to future fuel shortages, and new models are on the market. Look into them when you build a new home.

I have to warn you, Bill, that you are probably hooked for good. Salesmen I talked to told me that your first air conditioner is a "taster"—and you will go on from there, they say, to install either more room conditioners, as George Jones did, or a central system.

This is because air conditioning does so much, the salesmen told me. They say that because of closed windows, it cuts traffic noise. Because it filters the dust, it cuts down the frequency of repapering and painting. Because it filters pollen, it helps hay-fever victims.

So you're on the right track, Bill. Best regards to you, and love to Sarah and the kids.

Yours,
GARDNER SOULE

# Flying Seed Yields Nature's Secrets of Flight

OVER in Java, where the coffee grows, there is a peculiar vine that produces a flying seed. The seed is cradled in what looks like a "flying wing" airplane. Now it's being studied in this country for fresh clues to gliding flight. The seed is flown in a laboratory, while a full-size, German-made glider shaped like the flying-wing seed is flown over the Mississippi countryside to see what the seed has got that man hasn't yet discovered.

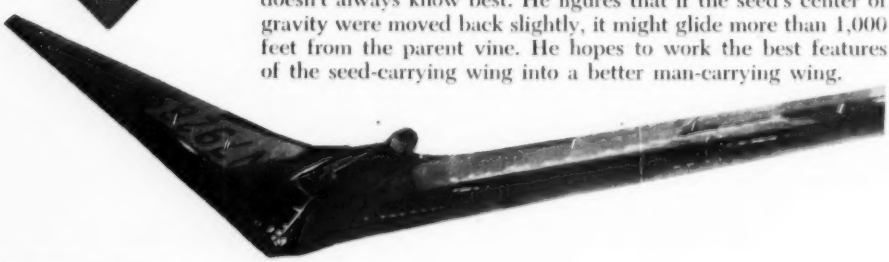
The seed's wings are almost as thin as tissue paper. Dropped from a height of 100 feet, it will sail for 450 feet before hitting the ground. And—what really interests the scientists—the tips of the wings flex up and down so the thing won't capsize.

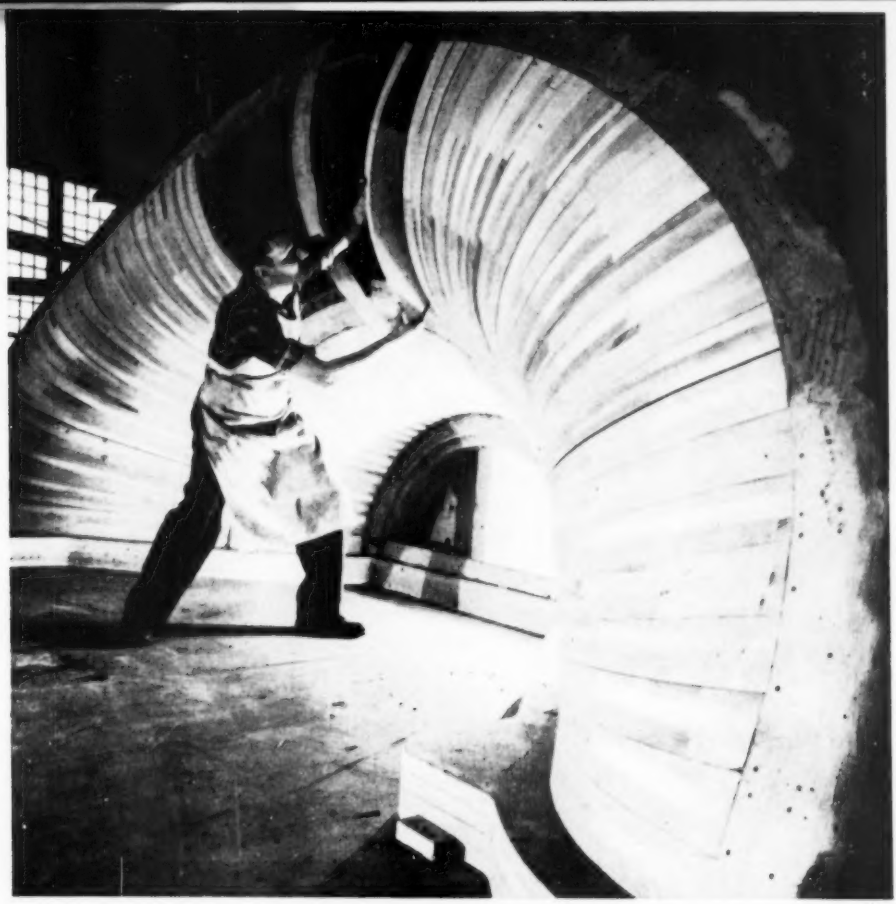
Dr. August Raspet of the Engineering Experiment Station at State College, Miss., who is conducting the investigation, says birds' wings flex the same way.

The seeds grow in a big, gourdlike fruit on vines that climb to the tops of the tallest jungle trees. The Zanonia vine, as it's known, discharges seeds when the fruit matures.

Dr. Raspet already has determined that Mother Nature doesn't always know best. He figures that if the seed's center of gravity were moved back slightly, it might glide more than 1,000 feet from the parent vine. He hopes to work the best features of the seed-carrying wing into a better man-carrying wing.

**COMPARATIVE flight studies of the Horten IV flying-wing glider (below) and the Zanonia gourd seed from Java (above) are being made.**



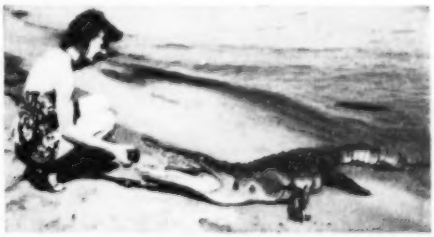


## Craftsman Creates a Wooden Giant for the Atomic Age

THIS woodworker—follower of an ancient trade—is fitting a rib into a giant pattern to help along the new artisans of atomic energy. The wooden form will shape a mold for casting part of a steam turbine for a 200,000-kilowatt generator unit that Westinghouse will install in a new atomic-energy plant near Portsmouth, Ohio.

## GI Builds Rolling Bunkhouse

T/SGT. L. E. Bouldin added the plywood canopy to the Ford V-8 pickup truck above to shelter him during transfer from Parks Air Force Base, Calif., to Alaska. On arrival, he removed the folding bunk and set up power tools to build a home for his family.

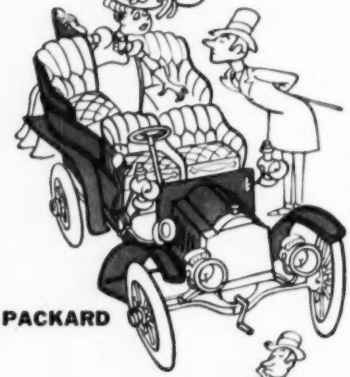


## Plastic Reptile Looks Real

THAT crocodile the lady is tempting is plastic. Cast in a mold from a genuine 10-foot one, he looks real enough to bite. The Milwaukee Public Museum developed the new method, after years of experimentation, to reproduce specimens for exhibit.

# For 50 Years They've Been Multiplying

# "The Seductive Pleasures



BEFORE you begin your leisurely browse through the next 35 pages of POPULAR SCIENCE MONTHLY, look back briefly at the cars that had just made their bow at the New York Automobile Show 50 years ago.

The excited show-goers, as one reporter lyrically put it, were "all willing converts to the seductive pleasures of horseless motion."

Steering wheels, on nearly every car by 1904, still caused a buzz of talk. Most of them tilted or could be moved forward to accommodate the portly driver.

Ball bearings in the transmission and rear axle were brand-new. The three-cylinder engine, "said to have steady running qualities," seemed to be gaining favor. So did air-cooled engines.

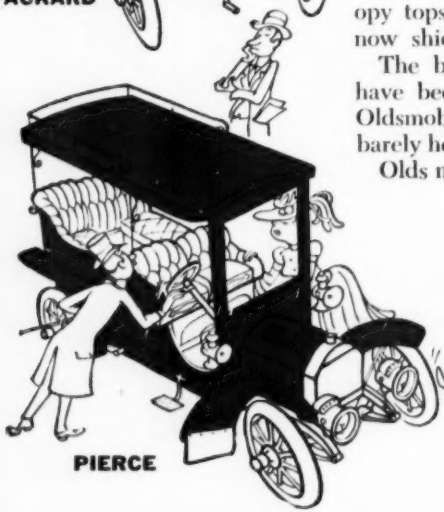
"Who would not dispense with the troublesome water-circulating systems," a columnist asked his readers, "if he were sure that a simple fan could be made to do instead?" Who, indeed?

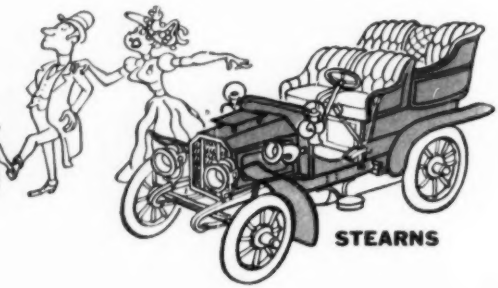
Dry batteries were still almost universally the source of current in cars, but the spark and throttle levers were on the steering wheels of most 1904 models.

The biggest gasps were reserved for the new "canopy tops with glass fronts and side curtains," which now shielded passengers from the elements.

The big-name car makers of today who recently have been celebrating their fiftieth birthdays—Ford, Oldsmobile, Cadillac, Buick, Packard—were seen but barely heard at the 1904 show.

Olds modestly claimed that "The Oldsmobile Goes."





# of Horseless Motion"

Cadillac seemed to feel that it deserved notice for being "The Car That Climbs."

The names that really counted in 1904, however, were Pope-Toledo, Stearns, Pierce, Thomas, White, Peerless, Winton, Knox, Franklin, Stevens-Duryea. Well-known cars were made in such unlikely spots as Syracuse, Buffalo and Chicopee Falls.

The big 1904 event was largely a touring-car show, and the majority of the big vehicles on the floor had four-cylinder vertical engines that were claimed to produce 24 horsepower. A few horizontal engines were displayed, but in one- or two-cylinder jobs.

Packard was acclaimed for having lowered the weight-to-horsepower ratio to 85 pounds.

The car that everyone talked about, though, was the 1904 Peerless tonneau—with a 35-horsepower engine, mind you! Its cylinders were a whopping 4¾ by 5½ inches. Low—reasonably so, anyhow—and rakish, its "bonnet" stretched for a third of its total length. The whizzer had four forward speeds and a reverse. What's more, it had three brakes. Two, on the drums of the rear wheels, were set by hand; one, on the transmission shaft, was controlled by the owner's proud foot.

Foreign cars, for the first time, had been elbowed into a room off by themselves. The 1904 auto show was a jubilant American performance. "America has caught up with France," a commentator trumpeted, then cautiously muted his tone to, "or, at any rate, she is close at her heels."—*Wesley S. Griswold.*

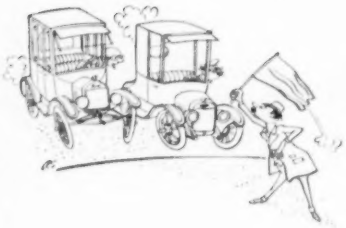
# Chevrolet vs. Ford



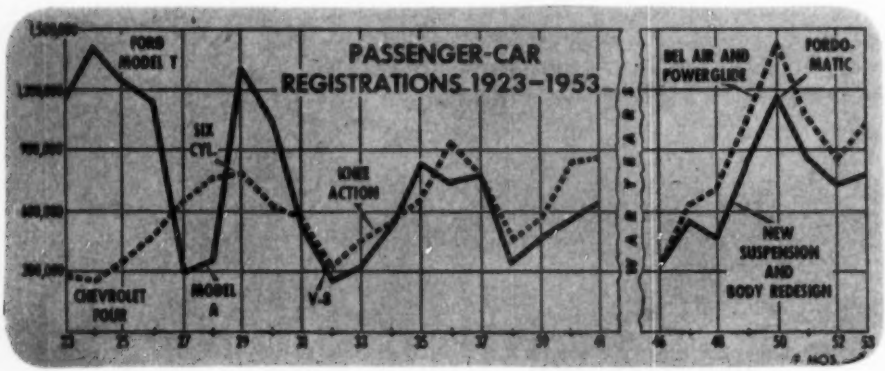
THIS year's most popular make of car is pictured on the facing page.

For 17 years, more customers have planked down their money for Chevrolets than for any other car in the world. Before that, there was a slam-bang battle in which the lead changed hands five times. Before *that*, old Henry sold Model Ts by the millions while Chevvy was still in short pants.

Ever since Henry Ford II took charge, just after the war, the rallying cry of his men has been "Beat Chevrolet!" Ford has poured hundreds of millions of dollars into new plants. Beginning in '49, the car was re-engineered and prettied up. An automatic transmission came out. Ford "raided" GM for engineers and stylists. (At one point Chevvy employees, meeting each other in the corridors, had a stock greeting: "Is Ford in your future?") This year, the first full one of a buyer's market, Ford's entry is showy: slick front suspension, brand-new 130-hp. engine.

But Chevrolet, the long-time champ, hasn't been sleeping. It has the biggest production capacity in the world. That paid off in the years when the market sopped up every car built. Chevvy developed a talent for giving people exactly what they wanted. It beat Ford by a year with an automatic transmission.

The '54 Chevvy comes in an amazing variety of colors and styles, powered by engines stepped up to 115 and 125 hp. Also, before very long, according to Detroit dopesters, Chevvy—like Ford—may take the wraps off its own new engine.

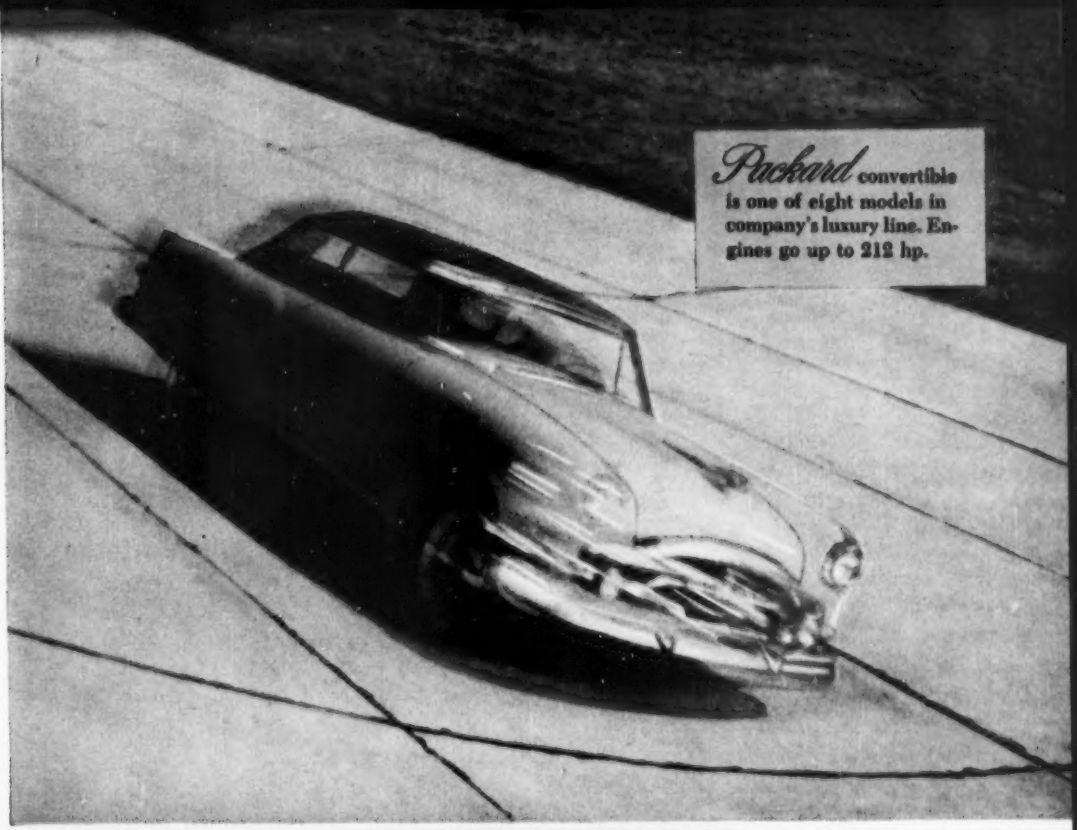


*Chevrolet* now gets 125 horsepower with a high-lift cam. A wide choice of colors, fabrics and interior appointments tempts the customers this year.

*Ford* uncorks a new 130-hp. engine, goes to ball-joint suspension. New Skyliner has a fixed plastic top.

*Buick* Super Six 182 hp. Like other Buick lines, it sports a new body, wrap-around windshield.

*Oldsmobile* 88 is one of the lowest '54 cars on the road. Girl beside it stands just over five feet.



*Packard* convertible is one of eight models in company's luxury line. Engines go up to 212 hp.

*Nash* has added a four-door station wagon, with optional carrier top, to Rambler line.

*Pretty, potent, and with plenty of room to grow—*
*that's the word on Ford's new 130-horsepower*
*OHV prime mover.*

**SPORTIEST CAR** in the line, aside from plastic-domed hardtop on earlier page, is this Sunliner convertible. You can have power brakes and power steering now; air conditioning and factory-installed dual exhausts are rumored to be in the works.

*Detroit's Biggest News:*

# The Ford's New Engine

**By Frank Rowsome Jr.**
PHOTOS BY W. W. MORRIS

THE story of the '54 Ford is mainly the story of an exciting new chunk of cast iron.

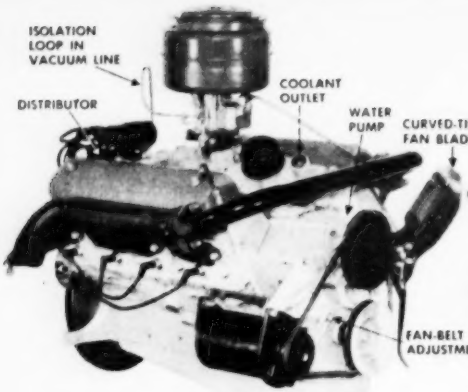
Weighing 570 pounds without its juices, it is a significant hunk of iron. Large numbers of people will know it intimately—its capabilities, appetites, noises and, possibly, weaknesses. Lots of persons will go into hock to buy it. Plenty of guys will give it loving Saturday-morning care (careful you don't burn your wrists on those manifolds trying to get at the plugs), while others won't raise the hood so long as it runs.

Already it has made history by obsoleting the L-head Ford V-8, one of the world's most familiar engines. The L-head, which last year was old enough to vote, had grown from 65 to 110 horsepower at its maker's hands, and to 200-plus under the violent ministrations of the speed-shop set. In certain respects—output, vibration periods, efficiency—it was beginning to show its age. It had been crowded from within the family by Ford's sassy overhead-valve six. Plenty of dirty-hands car enthusiasts will shed a tear for the wonderful old V-8. But if it had to go, as clearly it did, it couldn't have been replaced by a sweeter engine.

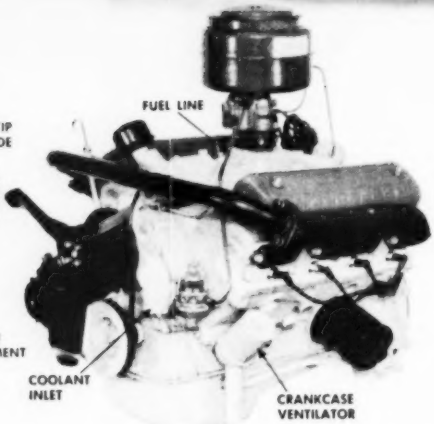
***What's new?*** This 130-hp. overhead-valve engine is no engineering face lift on the old job. It is wholly new: new block and heads; new valve train and manifolds; new crank, rods and pistons;

**HOW '54 ENGINES COMPARE AMONG THE BIG THREE**

| Engine | Bore (inches) | Stroke (inches) | Displacement (cu. in.) | Compression Ratio (-to 1) | Power (hp. @ r.p.m.) | Torque (lb. ft. @ r.p.m.) | Horsepower per cu. in. |
|---|---|---|---|---|---|---|---|
| FORD V-8 | 3.5 | 3.1 | 239 | 7.2 | 130 @ 4,200 | 214 @ 18-2,200 | .544 |
| FORD 6 | 3.62 | 3.6 | 223 | 7.2 | 115 @ 3,900 | 193 @ 10-2,200 | .516 |
| CHEVROLET 6 (POWERGLIDE) | 3.56 | 3.9 | 235 | 7.5 | 125 @ 4,000 | 200 @ 2,000 | .531 |
| CHEVROLET 6 (STANDARD) | 3.56 | 3.9 | 235 | 7.5 | 115 @ 3,700 | 200 @ 2,000 | .488 |
| PLYMOUTH 6 | 3.25 | 4.38 | 217.8 | 7.1 | 100 @ 3,600 | 177 @ 1,600 | .459 |
| '53 FORD V-8 (L-HEAD) | 3.19 | 3.75 | 239.4 | 7.2 | 110 @ 3,800 | 196 @ 19-2 100 | .459 |



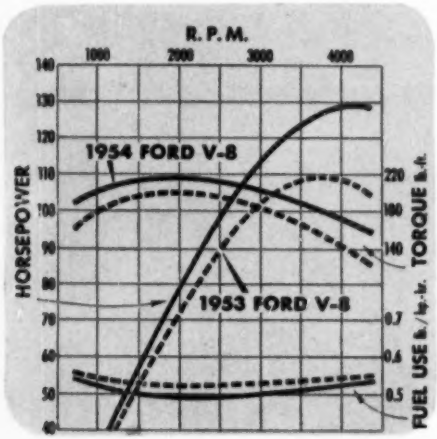
**CROSSOVER** exhaust pipe is now shorter, bridges top of engine. Dipstick and oil filler are moved to right. The cylinder heads and gaskets will fit on either bank of the engine.



**OIL FILTER** is a full-flow type, not the kind that just samples a portion of the circulating oil. Crankcase breather is a Lincoln's. In car, a steel skid pad guards bulge of oil pan.

new proportions and performance. Cubic inches and compression have been held the same as in the old engine—but power, torque and efficiency (as reflected in horsepower per cubic inch) have been boosted way up.

***How's it go?*** Like a bat. Slip behind the wheel of a new Ford (you'd have to be an owner or a small boy to tell it from a '53 just by looks) and flip the key. Two red telltales on the new instrument panel light up to signal no oil pressure and no generator output. Give the key a touch of overtravel; the telltales will wink off as she fires up.



**POWER AND TORQUE** are not only better than in old engine, but gas appetite is less. Ford suspects engine will be hot-rodders' dream; 130-hp. output can be stepped up greatly.

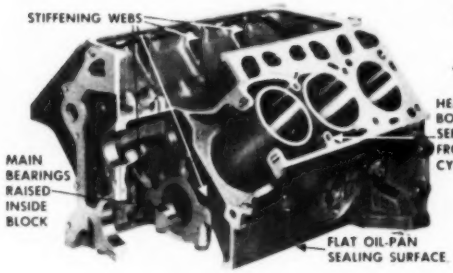
When the engine is warm, jazz the gas judiciously and notice how different it sounds from the old V-8. If you hit the accelerator on the L-head, even a sharply tuned engine would give out a quick "who-me?" gasp before the revs built up. This one climbs up fast, with no preliminary throat clearing.

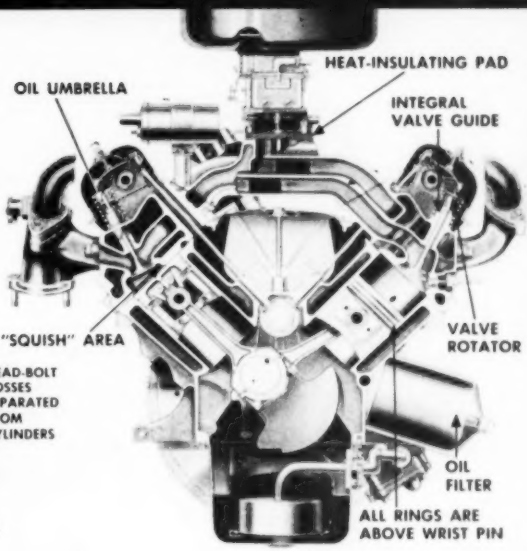
Now take it for a ride. The breakaway is hot—far snappier than the L-head's. If you belt it hard, there's a bit of wheelspin on smooth, dry asphalt; with bumps or car tracks to break the wheels loose, you get spin even at part throttle. Notice that the engine accelerates without that hard-working throb that the L-head put out—it both gets up there quicker and makes less fuss doing it.

The zero-to-60 acceleration time on a manual-shift job averages around 16 seconds. This is a solid three seconds faster than the older Fords turned in, and is substantially better than the main competition. In fact, it is often enough to let you run with such green-light showoffs as Caddy, Olds 88 and Chrysler.

Best breakaway times—if you like to wear out your tires in this curious sport—are racked up with a manual shift and an overdrive (4.10) rear axle, speed-shifted at crossover points of 30 and 50 m.p.h. indicated. Even if you are not a wrist wiz-

**CLOSE KINSHIP** to the hot Lincoln engine is revealed by sectional view at right. Note that combustion chamber has "squish" area to stir up fuel-air mix as piston comes up. In block below, bosses for head bolts are separated from cylinder walls, to keep the bores from being distorted out of round as head bolts are cinched up tight.





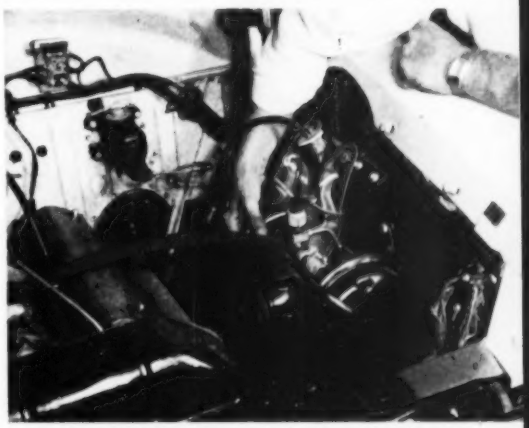
ard or are driving a Fordomatic transmission (using an L-to-D start), time to 60 will still hover around 18½ seconds. This is creditable going in most stock leagues, and will generally keep you from feeling brokenhearted at the light. Top speed, for this writer, averaged out at 96 m.p.h. true, with two two-way runs.

This good performance glistens a lot more in view of the fact that the engine eats less fuel than the L-head did, even though it dishes out 18 percent more power. The OHV job becomes additionally impressive when you realize that it is no handcrafted, lavishly built Special. It is, instead, a machine-made engine, designed for production in immense quantity, for reliability, long life and other homely virtues.

***How's it done?*** Part of the answer lies in the new proportions, part in structure and part in the new valve and combustion-chamber arrangement.

***Proportions.*** Shortening the stroke cuts down on engine friction appreciably, mainly by reducing the distance that piston rings scrub over cylinder walls. Ford engineers have figured that in the L-head, 30 percent of the total output was spent in overcoming internal friction—in civil war. In contrast, they calculate that the OHV loses only 18 percent of its gross power to friction.

Shortening the stroke pays off in cut-



**NOT A HOT-WATER BOTTLE,** that's a flexible container for windshield-washing fluid. Mechanism in foreground above is Ford's new power brake, an optional extra. There is no vacuum-storage tank, but since brake-pedal travel has not been reduced, driver has normal braking leverage if engine dies. Below, hand shows position of spark plugs—you can take them out easier from underneath.

Rear-quarter recognition features for '54 include black dashes on trim, new trunk latch.

**FRENCHED LIGHTS** now have little chipmunk cheeks at sides. New ball-joint front suspension, hitherto only on Lincoln, gives better cornering, eliminates rebushing kingpins.

**DASH** is prettied up in Lincoln manner, and has spot-turned metal background. Speedometer fits in plastic "astro-dome." Ford is holding to a manual choke.

## FACTS ON '54 FORD

**Model:** Mainline four-door sedan.

**Engine:** V-8 with overhead valves; 130 hp. at 4,200 r.p.m.; compression ratio, 7.2:1; displacement, 239 cu. in.; piston travel (in feet per car mile at 20 m.p.h., manual transmission), 1,505; bore and stroke, 3.5" by 3.1"; torque, 214 lb.-ft. at 1,800 to 2,200 r.p.m.

**Weight:** 3,405 lb. (approx.); per hp., 26.19.

**Transmission:** optional torque converter and automatic transmission or three-speed manual transmission with or without overdrive; rear-axle ratio with automatic transmission, 3.54:1.

**Steering ratio:** 25.3:1 over-all.

**Effective brake-lining area:** 173.5 sq. in.

**Springs:** front, coil; rear, semi-elliptic.

**Outside dimensions:** height, 64.1"; over-all length with bumpers and guards, 198.3"; width, 73.5"; wheelbase, 115.5"; overhang, front 35.1", rear 47.6"; tread, front, 58", rear 56".

**Inside dimensions:** seat-cushion width, front 58.9", rear 58.9"; leg room, front 42.8", rear 41.5"; headroom, front 35.4", rear 34.2"; seat height, front 13", rear 13.5"; vertical distance, steering wheel to seat cushion with seat in rear position, 5.9"; front-seat adjustment, horizontal 4.1", vertical .3".

**Tire size:** 6.70 by 15.

ting wear as well as friction. The new engine will travel 21 percent farther down the highway for the same amount of piston travel than the L-head did; or, to turn it around, will show a fifth less bore wear at the same speedometer mileage.

In case you are wondering if stroke-shortening is a magic cure-all, there are of course some drawbacks. One is a somewhat higher engine speed for equivalent output, a point partially canceled by the fact that a short-stroke job is much better suited for faster running. Another disadvantage, in a murky area of internal-combustion theory, is that the gain in mechanical efficiency may be partly offset by loss in thermal efficiency, unless compression is increased, and by slightly increased bearing loads.

Ford engineers won't give an inch on thermal efficiency, though. They assert that the OHV engine is far better than its predecessor in this department, and cite the fact that it needs a smaller cooling system and less copper in the radiator. Cooling in the L-head tended to be critical, as several million drivers have profanely observed. This was partly because there were two water pumps, two thermostats and four hoses to go blooey; but it was still more because exhaust passages ran sideways through each bank of the block, throwing a heavy extra load on the cooling system. The OHV engine is different. It has half the number of pumps, stats, and hoses, and it whisks hot exhaust gases directly out the head, putting far less heat into the block.

***Structure.*** Last August, when Ford engineers showed handmade and pilot-production engines to this writer, the thing they were obviously proudest of was not the flashy performance or the new valve train. It was the structure, which mainly means the block.

Except to members of the fraternity, a block is just an ugly casting with more holes in it than a piece of comic-strip Swiss cheese. To guys in the business, though, a block is basic—it *is* the engine. It governs how much power you can pull,

[*Continued on page 268*]

## Farewell to the L-Head V-8

MANY of the 5,500,000 people who jammed into Ford showrooms across the country on March 31, 1932, were doubtless inflamed with a desire to own a dreamboat like the one above. It cost $460 (bumpers and spare wheel extra), a big piece of change in that third year of the Depression.

What you got for your money was impressive: an honest-to-goodness eight-cylinder car, with 5.5-to-1 compression ratio, an amazing 65 horsepower, and real aluminum pistons. You could order one of 14 bodies in 11 color combinations. Crowning the line was a super de luxe convertible sedan that would set you back $650.

The gasoline tank was tucked back under the rear of the car, and there was a synchronizer to help you shift quietly between second and high. A little hinged door on the dash led to a cubbyhole where you could keep gloves. It was widely rumored—and no Ford salesman denied it—that with this advanced engine you could do better than 75 m.p.h. The acceleration, in that Model A era, was generally held to be almost frighteningly rapid.

***From Herbert Hoover to Hot Rods***

It was a long way back that these first V-8s appeared: Herbert Hoover was President, Jack Sharkey was heavyweight champ, and the hunt was on for the kidnaper of the Lindbergh baby. In the intervening years this hefty old engine (originally 625 pounds) was quickly debugged and then progressively refined. Oil-consumption and fuel-pump troubles were licked after the first few months. In less than a year the V-8 was outselling its four-cylinder brother by 12 to one.

Horsepower climbed to 75, 85, 90 and ultimately 110; compression moved up to 7.2; and the engine itself grew from 221 to 239 cubic inches. Several generations of kids cut their mechanical eyeteeth on this engine, and they can still remember the sense of excitement, faintly tinged with panic, the first time they took one apart. Before the war, the V-8 had become the hot-rodders' first and favorite love.

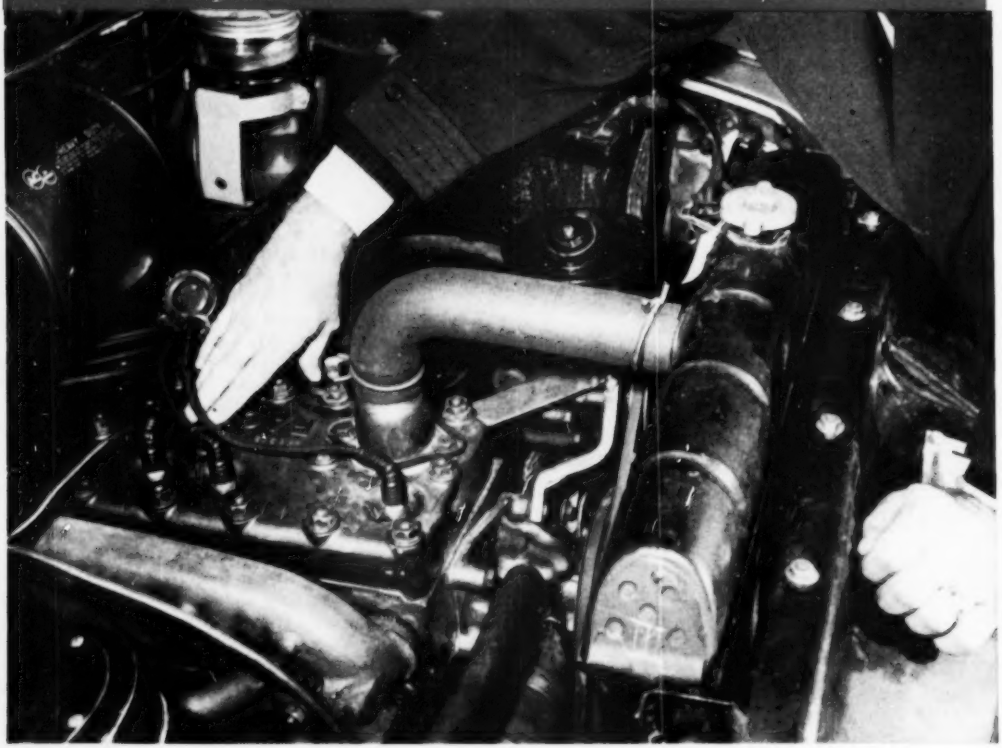
By the time the big Ford engine plants switched over late last fall, some 14,000,000 of these sturdy old goers had been built.

*King of the L-Heads:*

# Packard Hikes Passing Power

**THAT'S NO SPOOK** following me as I take a luxurious Caribbean for a workout. Instead, it's a '27 sedan that Packard has converted to a towing dynamometer, to give new cars extra work to do. Believe me, it was really quite a pull.

That die-cast aluminum head is velvet-smooth inside and out, stopping carbon build-up.



**This is rough on a car, but I wanted to see if the Patrician bogs down easily. It doesn't.**

# *New aluminum head and the highest compression yet give this big straight-eight brute a whopping torque.*

**By Wilbur Shaw**
*President, Indianapolis Motor Speedway*

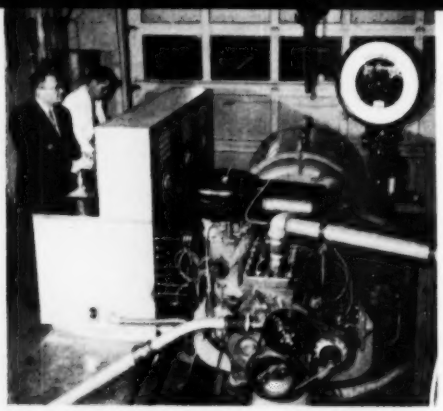
MAXIMUM torque when you need it plus some of the fanciest interiors I've yet seen in any car—that's what Packard has wrapped up for 1954 in its traditionally classic package. The grille is still *the* grille, Packard's familiar radiator shape dating (hold onto your bonnet and goggles) from 1904.

Behind the familiar Packard prows are cars put together after painstaking research into everything from bearskin carpeting to acoustic characteristics of big, flat body panels.

Not long ago I took a new 212-horsepower Patrician around Packard's test track and over their endurance roads to see what they had done to it. They told me that at 8.7 to 1, it had the highest compression ratio in the industry. At more than 4,000 pounds, that Patrician is Packard's biggest stock model and a lot of automobile. When they get that big, you tend to drive sedately—even though the Patrician will easily top a hundred. It's an extremely roomy car with five inches more leg room in the back seat than any other American six-passenger sedan.

It handles smoothly, the way a big boat should. Its power steering is easy but retains a natural feel. Company engineers told me they feel Packard, which was first with the frame-anchored, direct-acting unit, is on the right track. They're confident other firms will be going to the direct-acting setup before long. Clippers also have this system. Their manual ratio of 22.03 compares to a power ratio of 18.2.

Packard's power brakes retain that normal touch, too, with the aid of a reaction diaphragm. I liked the action of



**THE BIG LEVER** I'm pushing is the throttle of a Packard laboratory dynamometer. The scale at right shows that this big baby is putting out about 330 pound-feet of torque.

**DEEP IN SOUND ROOM,** an electronic shaker jiggles a hood assembly at various frequencies. Packard test engineer Roy Frailing adjusts oscilloscope that measures the response.

**FASTEN YOUR UPPERS** for this one. I took that plushy Patrician through once, which was all I wanted. I don't know how the bolts and welds manage to take it, but they do.

the brakes—they're not the touchy kind that slam you into the dash if you forget to gentle them.

With its 1954 cars, Packard is now going full throttle on its drive to recapture the luxury market's first place in sales. Packard lost this position in 1936 to Cadillac. Probably the clearest sign of this race can be seen in the 1954 Packard body. It's about the same as the 1953 body.

In other words, Packard once again will operate on the luxury-car formula: when a man invests in a big car he doesn't want one that will scream "last year" within a few months after his last bank draft has been cleared.

### *More Models Than Ever Before*

Packard is putting a big team into the field. It's the biggest array of models in the company's history. There are three Clippers (Special, De Luxe and Super); two Packards (Cavalier and Patrician), and a Custom line, including the Caribbean sports convertible and some eight-passenger sedans and limousines priced to nearly $7,000.

While the Patrician's engine, a bronze-colored L-head brute, is a remake of Packard's well-known straight-eight, the other three eights for '54 haven't been changed much. Three engines power the remaining Clippers and Packards: 150 and 165 horsepower in the Clippers; 185 horsepower in the Cavalier, smaller of the Packards. Engine 5406, the 212-horsepower job, fires the Patrician and the big Custom cars.

They tell me that Packard edged over the 200-horsepower mark only as a kind of by-product. For the present, at least, they disclaim any part in the horsepower race. But they wanted to drop an engine into their heaviest cars that would give a powerful push on the rear wheels at speeds where it's needed most—between 40 and 70 miles per hour.

They succeeded in getting 17 percent more passing power and 10 percent more horses. The 359-cubic-inch engine now delivers 330 pound-feet of torque at 2,200 r.p.m. That's with Ultramatic trans-

**I DON'T KNOW** whose grandma embroidered the escutcheon on Balboa's cream-and-scarlet upholstery, but it sure is pretty. Like hex hub, it dates from Packard's early days.

**PEEKING UNDER** this way is inevitable the first time you see a Balboa hardtop. The bonnet shields the back window, which can be cranked down. It will be powered later.

mission, Packard's torque converter, and represents a road speed of about 51 miles per hour.

The Patrician's new power mainly comes from an amazingly smooth, die-cast aluminum head, shaved down to eliminate breathing dams and topped with a four-barrel carburetor. Intake ports and the camshaft have also been reworked.

Packard has always been engineering-minded. If some recent models have seemed a bit noisier than they should have, you can bet your decibels they'll find out why. One approach to quietness is through proper body-metal design, and another is handled by good insulation. This year Packard is going hard after both.

Current body designs with their great expanses of near-flat metal mean lots of headaches for the people responsible for keeping out the flutters, rattles and buckles. That continental-styled hood, for instance, has only two "draws," the fluting at each side, to give rigidity to the hood panel. Without these it would flap around and bong like your grandmother's cookie sheets or a J. Arthur Rank trademark.

### *Dash Panel Thickened*

Attacking the problem from an insulating standpoint this year, Packard engineers put together certain interior panels with special sound dampers. I saw one dash panel that's a real Dagwood sandwich. It was six layers thick, consisting of 3/32" indented felt, ⅜" jute felt, Kraft paper, .125" to .140" mastic, .090" embossed paper board, and dash-lining carpet. It didn't rattle. END

## FACTS ON '54 PACKARD

**Model:** Packard Patrician 4-door sedan.

**Engine:** 8-cyl. L-head; 212 hp. at 4,000 r.p.m.; compression ratio, 8.7:1; piston displacement, 359 cu. in.; bore and stroke, 3 9/16" by 4½"; torque, 330 lb.-ft. at 2,200 r.p.m.

**Weight:** 4,142 lb.; per hp., 19.05.

**Transmission:** Ultramatic (torque converter, standard equipment), overdrive or standard shift; rear-axle ratio, 3.5:1 with Ultramatic, 4.55:1 with overdrive, 4.1:1 with standard transmission.

**Steering ratio:** manual 30.9:1, power 22.5:1; radius of turning circle, manual 22.5', power 21.5'.

**Effective brake-lining area:** 208.25 sq. in.

**Springs:** front, coil; rear, 5 semi-elliptic leaves, 2½" by 54⅛".

**Outside dimensions:** height, 62⅝"; overall length with bumpers and guards, 216½"; width, 77⅞"; wheelbase, 127"; overhang, front 35⅛", rear 54 3/16"; tread, front 60", rear 60 53/64".

**Inside dimensions:** seat-cushion width, front 62⅜", rear 62"; leg room, front 43½", rear 48¾"; headroom, front 36", rear 35¼"; seat height, front 14", rear 14 13/32"; vertical distance, steering wheel to seat cushion, with seat in rear position, 5 1/32"; front-seat adjustment, horizontal 5", vertical 1½".

**Tire size:** 8.00 by 15.

*With Gizmos Galore:*

THE SKYLARK

# Buick Adds Power and New Series

*Special gets V-8 engine and revived Century is one of the hottest cars on the highway.*

ON THE new Buicks with power braking and automatic transmissions, there's a little gizmo not much bigger than the chuck on a home-workshop lathe. You could guess until the cows came home what it's there for—until your engine happened to go dead on a long downgrade. Then you'd find out.

The gizmo is a little electric pump. It pumps nothing but vacuum. If your engine stops, shutting off the manifold vacuum supply to the brakes, the pump starts. Powered by Buick's 12-volt battery, it supplies emergency vacuum for power braking. The electric vacuum

**By Devon Francis**

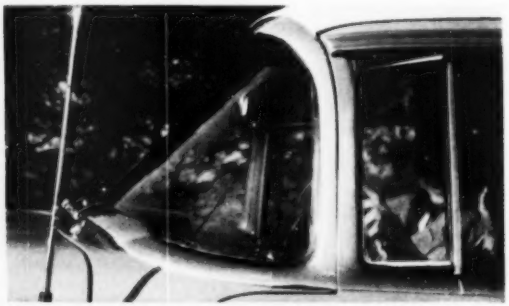
THE SUPER RIVIERA

**AT 85 M.P.H.,** Buick's 1954 Super sedan takes a curve on GM proving ground's high-speed lane. Car's 182 hp. developed an average true speed of 101 m.p.h. in straightaway runs with and against the wind.

**WRAP-AROUND WINDSHIELDS** and door hinging create this aperture when front doors are opened. Entrance is easier this year because of added foot room.

**HORIZONTAL SPEEDOMETER** and double roll-type panel are most striking interior changes. Extra blower on ventilation system provides fresh air on hot days.

**MODIFIED FISHTAIL** is feature of rear fenders. All convertible and hardtop models have high rear-fender wheel cutouts. Trunk opening measures 34" by 58".



**VISIBILITY INCREASE** for driver with wrap-around windshield is almost 20 percent. Air scoop, moved to cowl from grille, avoids intake of exhaust fumes.

pump is only one gizmo in a considerable list of gizmos and changes for 1954. Here's a run-down:

- An engine change supplying more horsepower in all the new Buicks.
- A crossbreeding of two series of cars to produce a brand-new series that may well outperform any standard U. S. automobile below the so-called luxury class.
- A spanking-new V-8 engine for the sturdy little Special.
- Bodies that are all new, clear across the board, for the first time in 18 years.
- A new type of speedometer that works like a revolving barbershop pole.

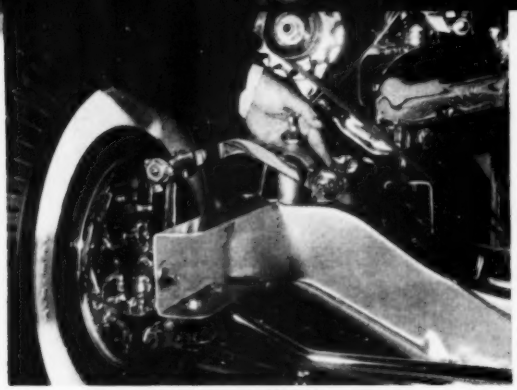
Buick horsepowers have climbed. The big Roadmaster series is now rated at 200, compared with last year's 188. The Super, with Dynaflow transmission, is up from 170 to 182.

And then there's that crossbred job, the Century line. Buick last manufactured the Century, as a series name, back in 1942. This year's Century—priced between the Special and the Super—is the Special in all but engine. There it packs the Roadmaster's wallop.

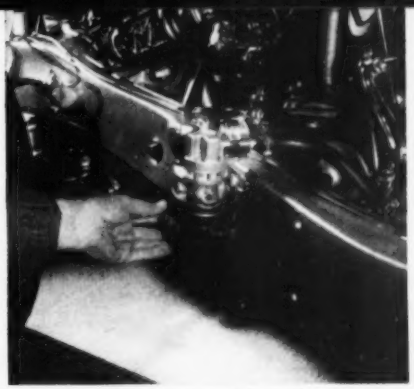
### *Special Is Brought Up to Date*

The other day at the GM proving ground a Century gave a 1953 Super a head start of a tenth of a mile and passed it a bare half-mile from its own take-off point.

The Special's new V-8 engine kills off the last of Buick's famous old valve-in-head straight eights. In 1953 the big Roadmaster and the Super were coiffured for V-8s. This year it was the Special's turn. Buick took the same block used in its other series of cars and bored smaller holes for cylinders.

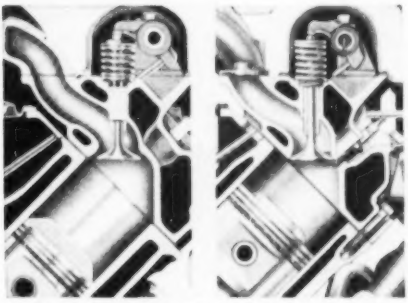


**AIRPLANE-TYPE SHOCKS** on front suspension replace lever type. Wheelbase is up 5½ inches on Super and Roadmaster two-doors, a fraction of an inch on Special.



**ELECTRIC MOTOR** mounted on left side of frame supplies emergency vacuum for power brakes. It responds to engine speed by reading the generator voltage.

**SPEEDOMETER,** with case off, shows how spiraled drum—looking like barber shop pole—creates creeping red line on horizontally graduated face to indicate speed. Covering on drum is rectangular sheet of paper painted half red, half black on the diagonal. As drum revolves, red part moves up or down, giving effect of going to right or left. Drive unit is conventional—a magnet revolved by a cable that is attached to drive shaft.



**BOOST IN POWER** is due partly to redesigning crown of piston. Old crown (left) was higher. New one (right) supplies less "squish area," better burning.

But the Special's head and stroke are identical with those of the other series. Its horsepower is up to 150 from 130, and the engine, with an automatic transmission, is 68 pounds lighter—with practically the same piston displacement as the old in-line.

[*Continued on page 274*]

## FACTS ON '54 BUICK

**Model:** Super 4-door sedan.

**Engine:** OHV V-8; 182 hp. at 4,100 r.p.m.; compression ratio, 8.5:1; piston displacement, 322 cu. in.; piston travel (in feet per car mile at 20 m.p.h.), 1,334; bore and stroke, 4" by 3.2"; crankshaft bearing surface, 52.8 sq. in.; torque, 300 lb.-ft. at 2,000 r.p.m.

**Weight:** 4,020; per hp., 22.1 lb.

**Transmission:** Dynaflow (torque converter); rear-axle ratio, 3.4:1.

**Steering ratio:** 24.1:1 (power); 26.7:1 (mechanical); radius of turning circle, 21.5'.

**Effective brake-lining area:** 207.5 sq. in.

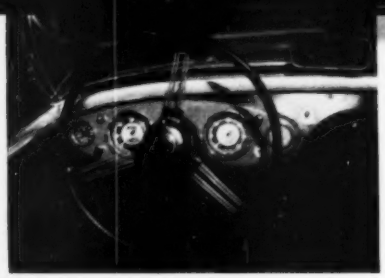
**Springs:** coils all around.

**Outside dimensions:** height, 62.4"; overall length with bumpers and guards, 216.8"; width, 79.9"; wheelbase, 127"; overhang, front 36.3"; rear 53.5"; tread, front 59", rear 62.2".

**Inside dimensions:** seat-cushion width, front 64.8", rear 65.9"; leg room, front 43.4", rear 44.2"; seat height, front 13.5", rear 12.6"; vertical distance, steering wheel to seat cushion, taken on arc, 4.7"; front-seat adjustment, horizontal 4.7", vertical 1.1".

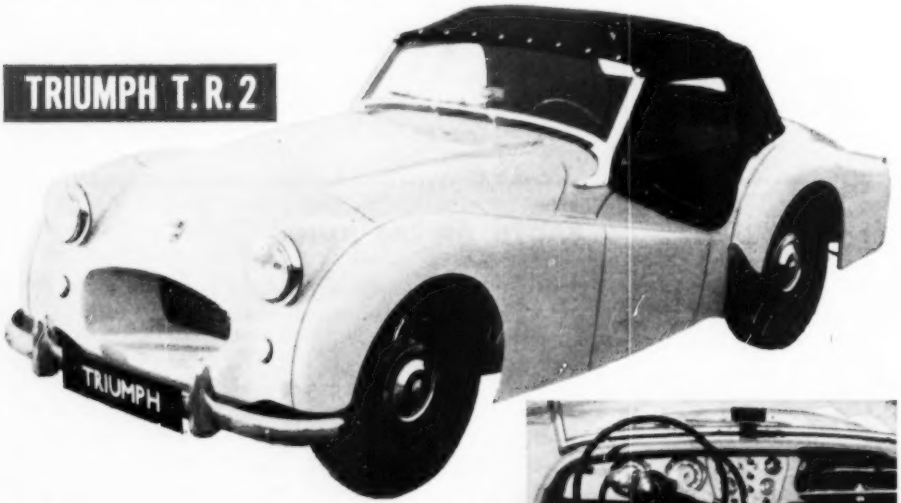
**Tire size:** 7.60 by 15.

**WIRE-SPOKE, KNOCK-ON WHEELS** are standard, as are twin carbs, tachometer and a British type of overdrive. Engine is an OHV four of about 162 cu. in.



# *You'll see more of these* Two Sports Imports

THE U. S. market for sports cars, peanuts by Detroit standards, still seems juicy to the British. Here are two new entries, aimed at the price and performance gap between the MG and the Jaguar. Both can better 100 m.p.h. and, with 90 horsepower to tote less than a ton, can climb up to 60 in 11 seconds. They corner well, let a driver shift happily, and are comfortable enough to avoid that camping-out feeling. Prices in New York: $2,985 for the Austin-Healey, $2,345 for the Triumph T.R.2.



**A BIT SMALLER,** this job gets 90 hp. from a 121-cu. in. engine peaking at 4,800 r.p.m. Compression is 8.5 to 1, as compared with the Austin-Healey's 7.5.

*Notes and Comments on*

# '54 Auto Specifications

**ON THE following two pages the principal specifications of U. S. cars for 1954 are tabulated. The cars listed are four-door sedans. Some figures —such as over-all length, weight and seat-cushion widths—will vary somewhat in different models, generally increasing with the cost.**

SERIES. With some makes, the series or lines are mechanically identical but differ in trim, appointments and body styles. Examples: Chevrolet, Ford. In other cases, the lines also differ in engine, transmission and wheelbase. Examples: Buick, Nash. The following pages show major mechanical variations available on all lines.

HORSEPOWER AND TORQUE. These are rough indices of breakaway, highway acceleration and top speed, and are almost universally higher this year. The revs at which power and torque peaks occur are also a little higher.

DISPLACEMENT. This is the best measurement of the size of an engine. Roughly, the more inches, the more engine.

COMPRESSION AND FUEL REQUIREMENT. Almost all U.S. cars will function on regular gas if the timing is degraded sufficiently. But a good many won't be happy unless fed a diet of premium gasoline, and timed to suit. The fuel requirement shown is the maker's recommendation, and is the fuel used to produce the rated power and torque.

Engines listed as needing only regular fuel will often give slightly higher output on premium fuel *provided* timing is slightly modified.

OVER-ALL LENGTH. Since this includes bumpers and bumper guards, it shows if that new job will fit in your garage.

WHEELBASE. This is the "dynamic length" of a car, and discounts any hanging gardens that stylists may have planted at front and rear. Current opinion is that a long wheelbase will ride better, a short one will corner better.

STEERING RATIO. The higher the numerical ratio, the "slower" the steering —the more you have to turn the wheel to produce a change in direction. Ratios are coming down somewhat as power steering grows more popular.

EFFECTIVE BRAKE-LINING AREA. Stopping power grows more vital as horsepower and highway speeds climb. Lining area reflects both pure braking ability and also probable resistance to "fade"—that terrifying failure of overused brakes.

REAR-AXLE RATIO. Most manufacturers offer a selection of ratios. Which one you get is principally governed by the transmission you select, and sometimes by body weight. However, you may have an option on small variations, depending on whether you drive on flat or hilly country, and on whether you prize performance or economy. The higher the ratio, numerically, the more the engine turns in relation to the rear wheels. Overdrive, when engaged, has the effect of lowering the numerical ratio of the rear end.

POUNDS PER HORSEPOWER. The lower this figure, the more "jump" a car will have at getaway and passing.

HORSEPOWER PER CUBIC INCH. This is a rough measurement of engine efficiency; a high value here means that a power plant puts out more for its size.

PISTON TRAVEL. This is an approximate guide to wear: the lower the figure, the less wear accumulated per mile.

POUNDS PER SQUARE INCH OF BRAKE LINING. This figure mirrors how hard each inch of lining must work.

# Car Score Card for '54

## ENGINE SPECIFICATIONS

| | | TYPE OF ENGINE | MAXIMUM BRAKE HORSEPOWER AT WHAT ENGINE SPEED (Horsepower; r.p.m.) | MAXIMUM TORQUE AT WHAT ENGINE SPEED (Pound-feet; r.p.m.) | BORE AND STROKE (Inches) | DISPLACEMENT (Cubic Inches) | COMPRESSION RATIO (to 1) | FUEL REQUIREMENT (Regular or Premium) | COOLING-SYSTEM CAPACITY (Quarts) | CURB WEIGHT (Pounds) | OVER-ALL LENGTH (Feet & Inches) |

*"Don't scratch it!"*

**AS THE COUPE DE VILLE CADDY** was shoehorned out, Janet stood by anxiously.

*"Mmmm. Looks a little lower."*

**THE FIRST COMPLETELY NEW CADDY** since 1950, wheelbase is up three inches, height down a half-inch, over the '53 (shown on the left). But length is the same. Air-vent inlets are now in the cowl. Restyled grille and longer "eyelids" caught Janet's attention.

*Something to Whistle at:*

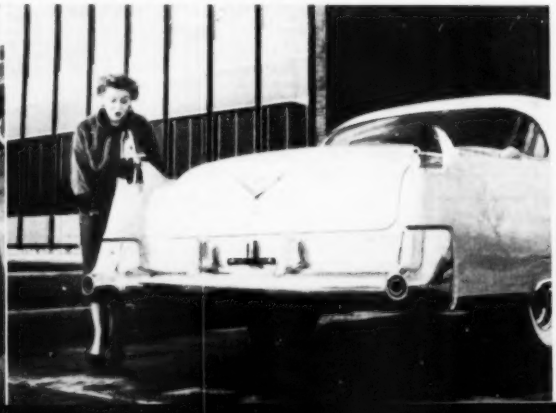
# Cadillac's New Curves Cover New Chassis

*"Do I have to understand it?"*

**THE V-8 ENGINE**—Greek to her—has 230 horsepower, 20 more than last year. Removing the spring expander from the oil ring and chroming the top compression ring reduced friction and cylinder wear. The new starter's so quiet you can't hear it.

*"That's where the gas goes!"*

**CADDY'S HIDDEN-GAS-CAP TRICK** was new to Janet. The twin exhaust ports in the rear bumper are round this year. The greater width of the rear window is no optical illusion—it's 100 square inches larger. Wider rear spring leaves soften the ride.



*Lovely Janet Hoffmann gives a model's-eye view of one of the world's most luxurious automobiles.*

THE pretty girl in the photographs is 23-year-old, ash-blonde Janet Hoffmann. We telephoned her at her Detroit home the other day to ask how she would like to drive a 1954 Cadillac.

Her response was a ladylike squeal.

The story of the new Caddy is reflected in Janet's reaction to it.

A professional model, Janet has been glamorizing automobiles, tooth paste and nightgowns for photographers since 1949. For this tour in front of the camera we told her to just be herself.

"Okay," she said, "no glamour."

How well she succeeded in presenting a de-glamorized appearance with one of the world's most glamorous cars is left to the reader to decide.—*Devon Francis.*

### "What's this thing for?"

**A RAIN MOLDING over the windows lets you open them slightly for ventilation without getting wet. Janet was surprised to learn that while Caddy makes the most expensive U.S. luxury car—an $8,000 convertible—its Series 62 coupe is only $3,575.**

### "Oooh, that fabric!"

**AND OOOH, THOSE SEATS—two inches wider. That in-trument panel in front has a top that comes off. That's so a mechanic can work on the machinery right side up. Caddy has new power brakes with a high pedal to "fail safe."** ***(Continued on the next page.)***

### *"What a windshield!"*

**WRAPPED AROUND,** it gives front-seaters a look out the side. Windshield washers, standard equipment, are automatic: push a button, the water squirts out and the wipers start. After the water shuts off, the wipers swing six more times and then stop.

### *"The heat comes out there."*

**TWO HEATING SYSTEMS,** one for the front seat, one for the rear, keep passengers warm. Heat for the rear seat is piped through the body and through louvers located at the leading edge of the door when it's closed. It flows out of the door at the sill line.

### *"You turn this for cool air."*

**AN AUXILIARY CONTROL** for the air-conditioning system is on the package shelf in the rear. One of the two air intakes is in the foreground. A clutch disconnects the compressor on the engine when the cooling system is shut off, saving power and wear.

### *"Whee! Feel that getaway!"*

**IT'S SMOOTHER, TOO.** The front wheels were moved out slightly and the engine lowered. That let Caddy engineers straighten out the drive shaft, giving the universal joints less to do. The result of these modifications is an almost complete absence of vibration.

## FACTS ON '54 CADILLAC

**Model:** Coupe de Ville (Series 62).

**Engine:** OHV V-8; 230 hp. at 4,400 r.p.m.; compression ratio, 8.25:1; piston displacement, 331 cu. in.; piston travel (in feet per car mile), 1,328; bore and stroke, 3 13/16" by 3⅝"; torque, 332 lb.-ft. at 2,800 r.p.m.

**Weight:** (shipping) 4,395 lb. (est.); per hp., 19 lb. (est.).

**Transmission:** Hydra-Matic; rear-axle ratio, 3.07:1.

**Steering ratio:** 21.5 with power steering (standard equipment); radius of turning circle, 23.5' (est.).

**Effective brake-lining area:** 211.6 sq. in.

**Outside dimensions:** height, 59.7"; overall length, 223.4"; width, 80.1"; wheelbase, 129"; overhang, front 34.9", rear 59.5"; tread, front 60", rear 63.1".

**Inside dimensions:** seat-cushion width, front 63.9", rear 56.4"; leg room, front 43.2", rear 41.4"; headroom, front 34.3", rear 34.4"; seat height, front 14.9", rear 12"; vertical distance, steering wheel to seat cushion, with seat in mid-position, 5.4"; front-seat adjustment (electric), horizontal 4", vertical 1".

**Tire size:** 8.00 by 15.

*Real Lowdown:*

# New Olds Hugs Road

*Rakish fenders, racy lines and a 20-horsepower boost in all models distinguish GM's "middle car" for '54.*

**By Kenneth Wylie**

YEARS past, such cars as the American Underslung, Ruxton and Cord have snatched their low chassis over U. S. highways. The 1954 Oldsmobile is right in this racy tradition.

But there's a difference. The car is low—and it isn't. Low-slung automobiles of the past often have been just that: low-*slung*. The new Olds is not. It looks lower, and, in fact, the body is down 3 1/10 inches. But running gear has stayed up where it was.

Its ground-hugging appearance has been subtly achieved by stylists and engineers who wanted to give the car better looks and road-holding qualities while saving Olds' buyers from the demonic racket caused by road-dinged flywheel covers and differential housings.

New pavement-to-roof height of all three Olds models is just 60½ inches. Once the engineers decided lowness would be the accent for 1954, they knew several roads were open to them:

They could take up all the shrinkage in one swoop by bringing the roof down, but this would simply aggravate the problem of head and hat clearance that already is plaguing the industry.

They could sling the frame lower between wheels, but then the driver would have to be constantly on guard around

**Though car measures several inches lower, clever design has kept about the same headroom.**

**Body width has been increased only two inches, but lower lines give a much wider appearance.**

**NEW VENTILATOR,** similar to Nash's, was moved from grille up onto cowl at base of windshield, where Olds engineers say it will admit less dirt, especially in city traffic.

**CURVE OF REAR DOOR** molds smoothly into the rear window, which like all the windows on the '54 Oldsmobile has been restyled to achieve a new "wide-eyed" look.

rutted roads, soft ground and steep driveways lest he chop up the undercarriage.

They could recess floor panels, but this again would accentuate a problem that has been getting worse: the growing transmission and drive-shaft hump.

Finally, Olds technicians knew they could use the eclectic approach, taking the best of several methods. This they did, concentrating work in seven areas:

1. Frame side rails were shaved to cut their vertical measure and widened to increase their strength.

2. The body was dropped lower on the frame by pushing the two closer together. Previous pavement-to-floor distance was 15 inches; new is 13 inches. Old underbody-to-road distance was 10½ inches; this has been chopped to 8½. Drive gear in chassis center stays up where it was.

### *Hydra-Matic Unit Turned*

3. Over-all interior body height was cut slightly.

4. In a nice application of geometry to mechanics, the Hydra-Matic transmission unit was rotated 22 degrees to get its high hump to one side and out of the way. This necessitated redesigning both case and some shift components.

5. The next step was like straightening pigeon toes. Forward mountings for

the rear semi-elliptical springs (coils in front) were shoved outward from a higher plate between the rails to a lower one on the rails. This lowered and brought the springs from a splayed to a parallel position.

6. Four-barrel carburetor and top-mounted air cleaner were brought down an inch to squeeze them under the lower hood. The new hood, combined with the massive wrap-around windshield, makes for excellent visibility. Out of a total increase in glass area for the whole car of 278 square inches, the windshield alone claims an increase of 185 square inches.

Higher front fenders have been thrown in, too, as a visual assist in power-fingering the car into a parking space.

7. The old 11-plate battery has been replaced with a lower one of slightly different shape with nine plates. Olds made this change not only to work in a smaller case beneath the descending hood line but also to take advantage of changed ignition requirements. They were revised partly because of a new starter motor.

**WHERE INCHES COUNT: The young lady is gauging the distance from the carburetor mounting to the top of the air cleaner. Careful redesign here dropped hood one inch.**

### *Foolproof Fuse Box Is Color-Coded*

The other changes in Oldsmobile for '54 are largely refinements. They run the course from ironed-out, chromeless body contours to a color-coded fuse box under the dash that makes it almost impossible to mess up your electrical system.

Olds' basic overhead-valve V-8, brought out in 1950, has been made 20 horsepower hotter. They've drilled out its bore from 3¾ inches to 3⅞ and installed high-compression gaskets. The 88 engine is up from 150 horsepower to 170; the Super 88 and 98 go from 165 to a respectable 185 horsepower. Compression ratio for both engines now stands at 8.25 to 1, up .25.

As an extra nudge in this horsepower boost, breathing was improved and the exhaust system sharpened up by throwing out the old "Y" exhaust-line connection. Both right and left manifold lines now meet in a junction box. END

## FACTS ON '54 OLDSMOBILE

**Model:** Classic 98 4-door sedan.

**Engine:** OHV V-8; 185 hp. at 4,000 r.p.m.; compression ratio, 8.25:1; piston displacement, 324.3 cu. in.; piston travel (in feet per car mile), manual 1,407, Hydra-Matic, 1,331; bore and stroke, 3⅞" by 3 7/16"; torque, 300 lb.-ft. at 2,000 r.p.m.

**Weight:** 4,108 lb.; per hp., 22.2 lb. (with Hydra-Matic).

**Transmission:** standard, 3-speed synchromesh manual shift (Hydra-Matic optional); rear-axle ratio, 3.4:1 with standard transmission, 3.2:1 with Hydra-Matic.

**Steering ratio:** manual, 27.5:1; power, 25.7:1; radius of turning circle, 21.5'.

**Effective brake-lining area:** 191.7 sq. in.

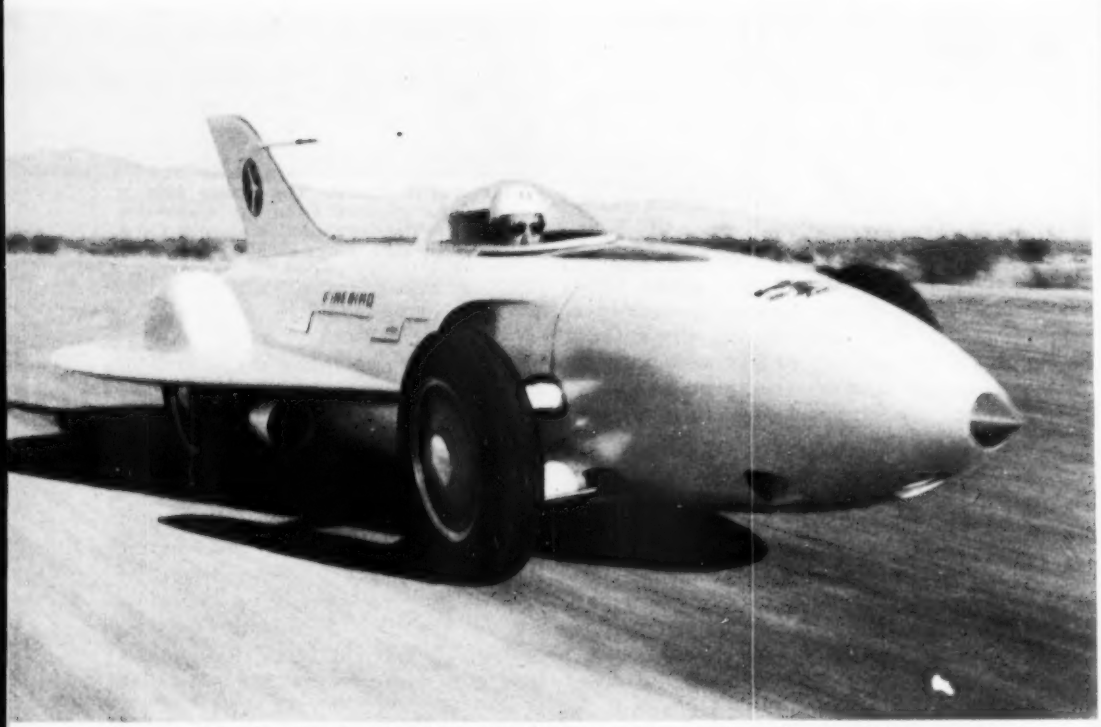
**Springs:** front, coil; rear, 5 semi-elliptic leaves, 2½" by 58".

**Outside dimensions:** height, 60.5"; overall length with bumpers and guards, 214.3"; width, 78.3"; wheelbase, 126"; overhang, front 33.9", rear 49.3"; tread, front 59", rear 58".

**Inside dimensions:** seat-cushion width, front 62.3", rear 62.5"; leg room, front 43", rear 44"; headroom, front 35.5", rear 35.4"; seat height, front 13.2", rear 13.2"; front-seat adjustment, horizontal, 4.4".

**Tire size:** 7.60 by 15.

# *Firebird on the Desert:*
# America's First



Using tail fin for directional stability, Firebird roars down track at desert proving ground.

**BIG SCOOPS** on body feed air to engine. Smaller ones below ventilate cockpit. Car has double-wishbone torsion-bar front suspension, DeDion independently sprung rear wheels.

**SPLIT-TYPE AIR BRAKES** on vestigial wing yawn open to help wheel brakes stop car. Sole function of steel-lined tailpipe is to spew out huge volume of burned-kerosene gases.

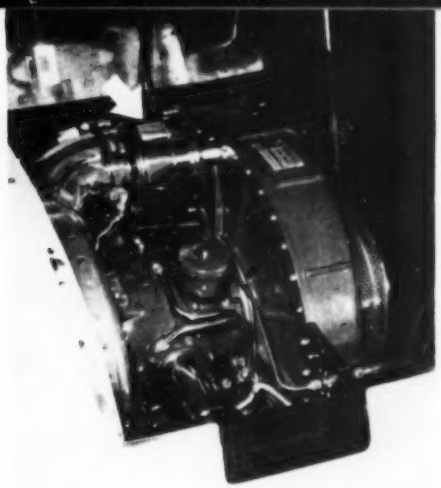
# Turbo Car

A THING that looks like a jet airplane —right up to and including a needle nose, delta wing and whopping exhaust—has been running around on the desert near Phoenix, Ariz. But it isn't a jet. It isn't an airplane. It's America's first gas-turbine automobile.

It's driven by the same kind of continuous-combustion engine that drives Air Force jet fighters and bombers. But the power generated, instead of being used for reaction-propulsion as in an airplane, is fed to the rear wheels.

The Firebird, as the car is called by General Motors, is purely experimental. GM built it to find out whether this kind of motive power can be used in automobiles or trucks.

The Firebird is powerful. A two-wheeled turbine, mounted behind the driver, delivers upward of 370 horsepower on its diet of kerosene. The forward turbine wheel, driven by burning gases, turns at a maximum of 26,000 r.p.m.—compared with some 4,000 for passenger-car piston engines and 6,000 for racing engines—and "idles" at 8,000. The power turbine behind this wheel reaches a maximum of 13,300 r.p.m.

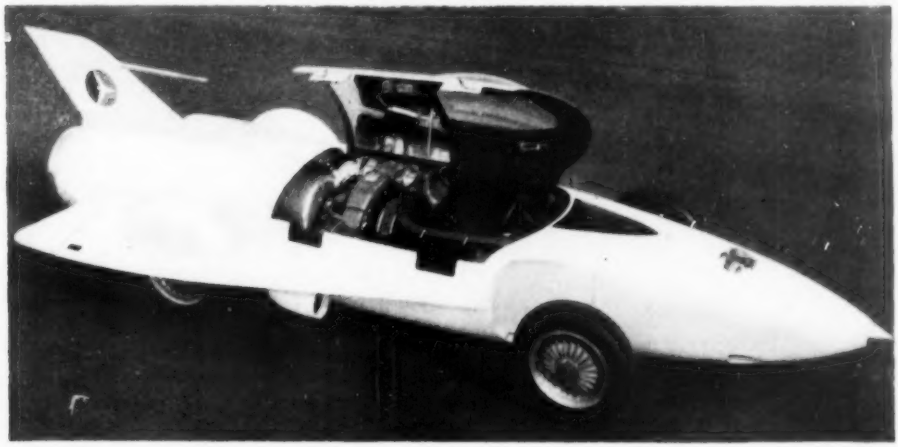


**SEPARATE CHASSIS, snugged into regular car chassis, is used to mount engine and transmission. Arrow indicates one of two combustion chambers. At right of it is compressor; at left, power turbine. Drive turbine, behind it, is hidden by body shell. Two-speed transmission mechanically links drive turbine and rear wheels. Firebird is 222 inches long, 80 inches wide, 55 inches high at fin. Wheelbase is 100 inches. Because of high fuel consumption, engineers consider prospects of using gas turbines in passenger cars as slim.**

Driven through a gas fluid coupling, the car is always "in gear," and the high idling speed necessitates putting chocks under the front wheels to take the strain

[*Continued on page 282*]

**Single canopy covers cockpit and engine compartment. Projection on belly is oil cooler.**



*Built to Fly:*

# Army Tests Aluminum Jeep

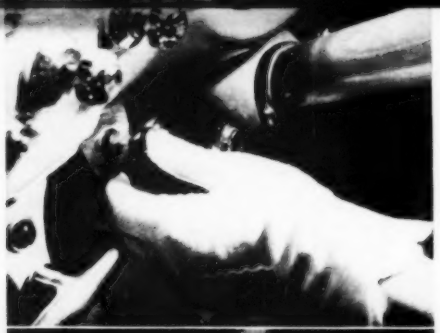
**ABBREVIATED Jeep measures 8 ft. 4 in. from nose to bobbed tail, compared with 11 ft. 7 in. for standard model in background. To simplify servicing, most parts are interchangeable.**

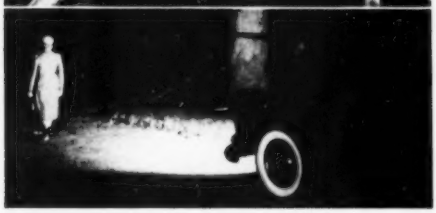
PROBLEM: to trim the fat from a Jeep, for easier lifting by plane or helicopter.

Answer: this new Aero Jeep, built by Willys for Army tests. It is three feet shorter and 1,200 pounds lighter than its not-so-big brother. It has an aluminum body, magnesium wheels and no dash instruments at all. But its 60-horsepower L-head four will wheel it at 70 miles an hour and tote a 1,025-pound payload.

Says Mike Ordorica, designer of the 1,475-pound baby:

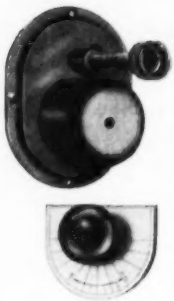
"I started by examining each part carefully—if I could substitute something lighter for it, I did. If I could throw it away, I did. You'd be surprised how much I threw away."





# *New* for Your Car

**1. Switch Lights Your Path.** With this delay switch in charge, your car's lights stay on long enough to let you enter the house, then switch off automatically. The pneumatic switch is adjustable for a delay period of up to 1½ minutes. It can be wired in to operate the headlights, tail lights, spotlight or backup light.



**2. Buzzer Reminds Speeders.** Designed to prevent unintentional speeding, this dash accessory sounds a warning buzzer whenever a car goes too fast. A control knob selects the threshold at which the warning will sound. The device works off the speedometer cable.

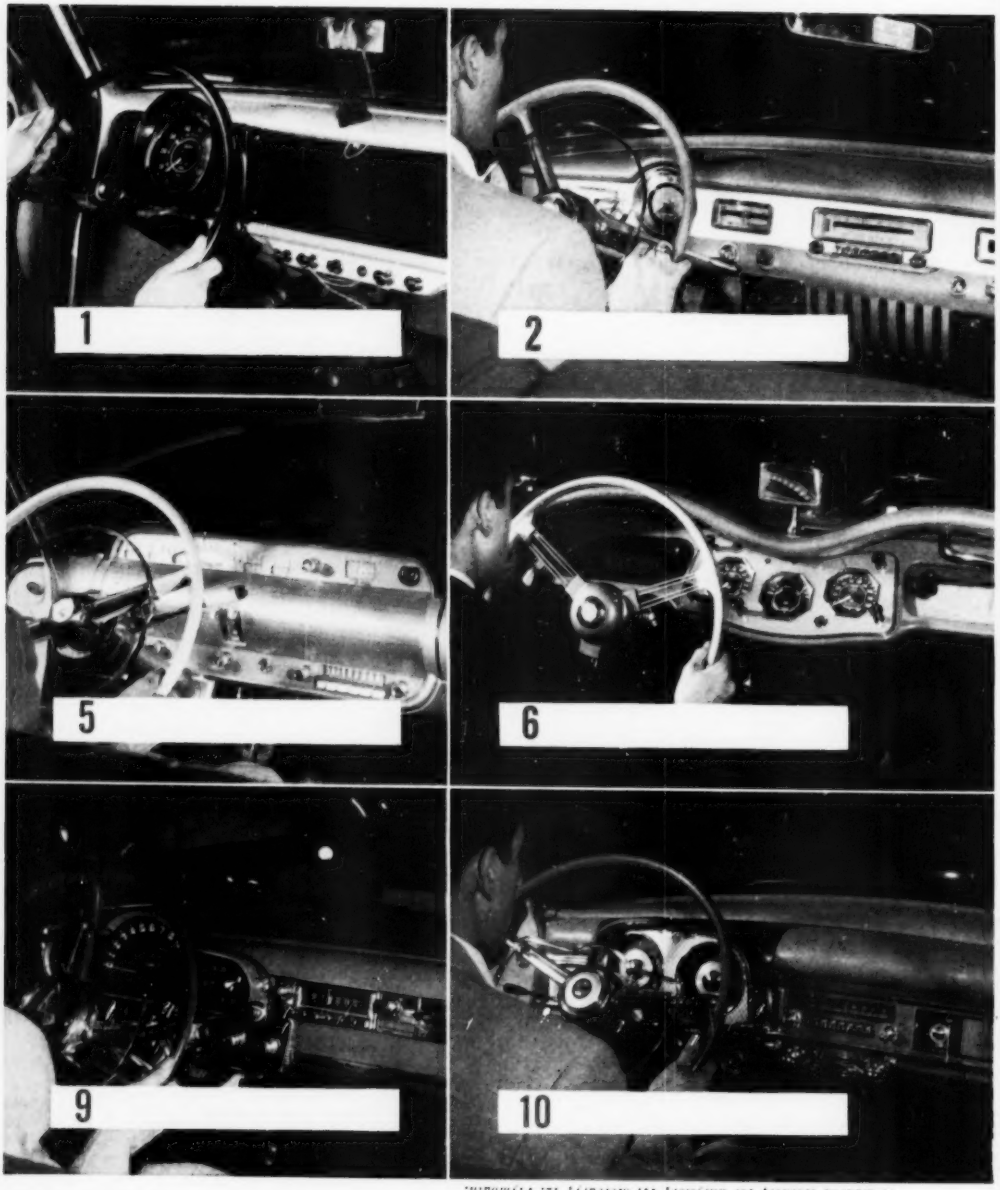
**3. Pedal Is Wider.** An extension that can be attached in a minute fits on the brake pedal of cars with automatic transmissions. It is intended to make left-foot braking more convenient on automatic-drive cars that do not already have a widened pedal.

**4. Clicker Warns of Soft Tires.** This little metal device fits between the bead of the tire and rim of the wheel. Whenever a tire loses enough air to cause a bulge to appear at the bottom—usually about eight pounds under rated pressure—it sounds off with a click at each revolution of the wheel to warn the driver.

**5. Slide Rule Figures Gas Mileage.** Those guesses as to how many miles a gallon you're getting will become a lot sharper with this cardboard slide rule. Each time you gas up, you set the calculator to the amount of fuel the tank takes and to the miles traveled since the last filling, and read off average gas mileage.

Bottomley Enterprises, 14066 Ford Rd., Dearborn, Mich.; 4. Stanley Mfg. Co., 538 Ridge Bldg., Kansas City, Mo.; 5. MRMCO, 800 S. Ada St., Chicago.*

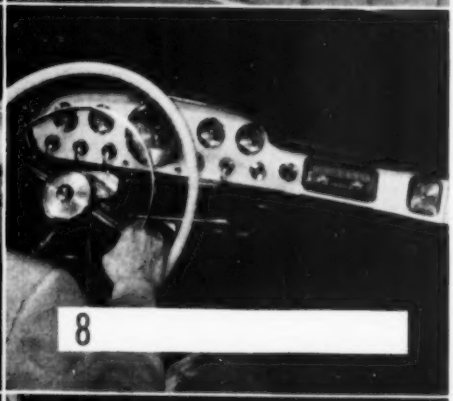
# *Dashboard Check-Out:*
# What Car Are You

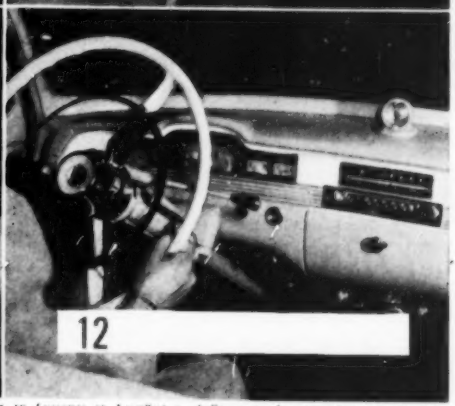


9. Hudson Hornet; 10. Chrysler; 11. Mercury; 12. Plymouth.

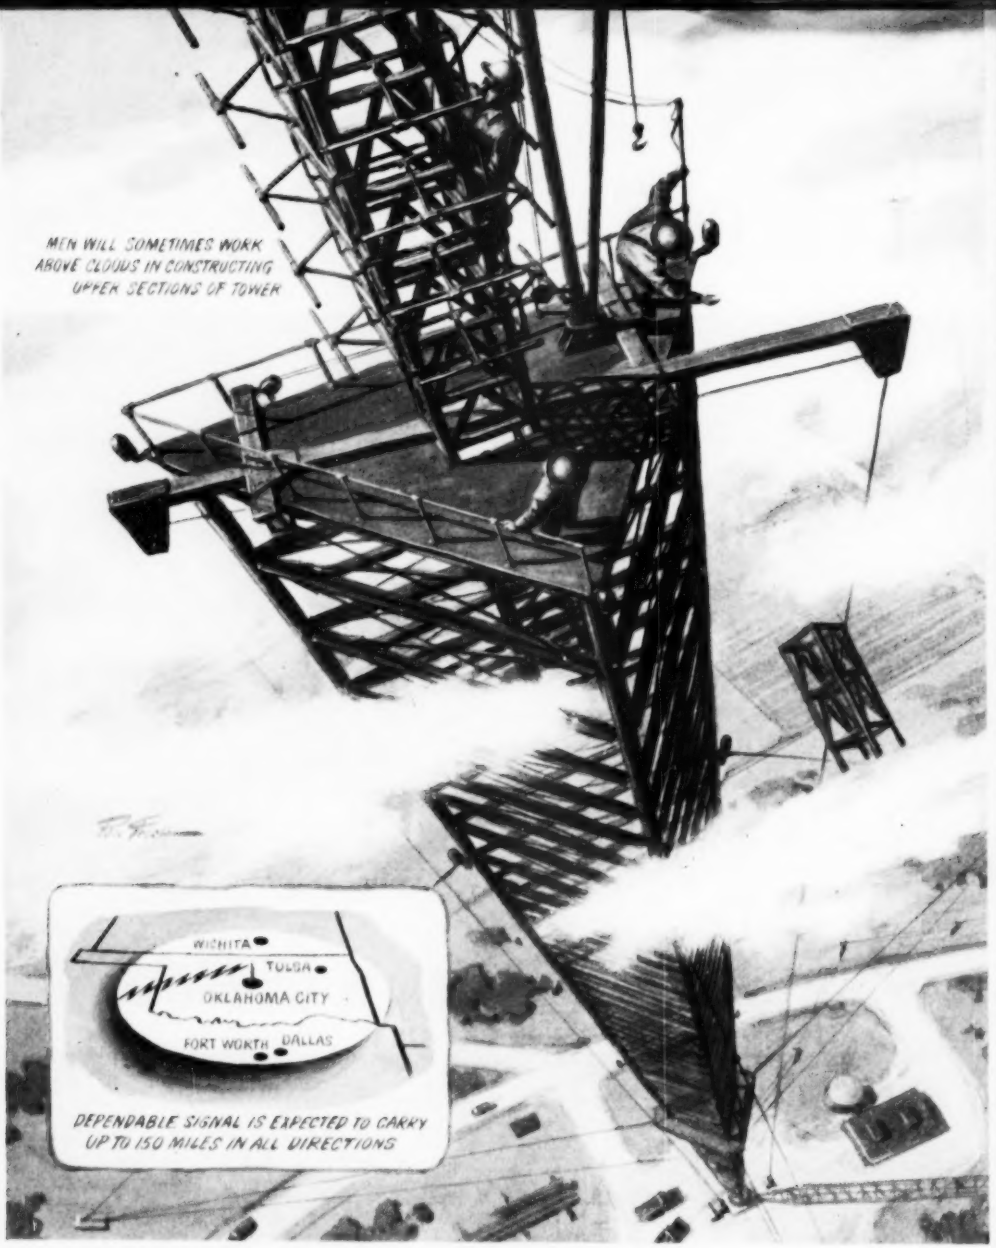
# Driving?

HERE'S a chance to test your "inside" knowledge of cars. How many can you recognize, just by their dashboards? Tip: Eight are U. S. '54 models, four are British. Check below for the answers.





*Answers: 1. Standard 6; 2. Dodge; 3. Jaguar; 4. Austin; 5. Lincoln; 6. MG TF; 7. Studebaker Commander; 8. De Soto;*

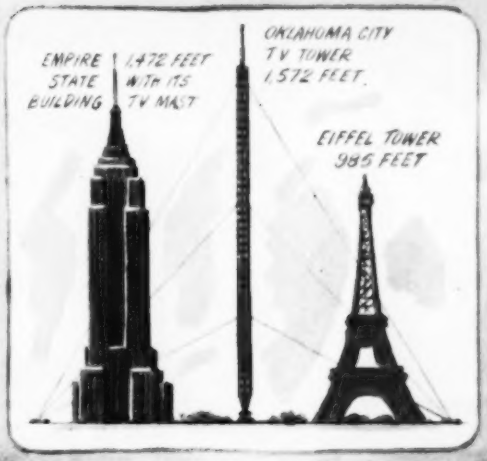


# Man's Tallest Tower to Broadcast TV

THE highest structure ever attempted by man is climbing skyward from the Oklahoma plains. A hundred feet taller than the world's tallest building, it will be used to broadcast television programs beginning next July.

KWTV, Oklahoma City, wants a lot of height to boost reception range. It's taking some doing to achieve it.

THE TOWER WILL HAVE A ONE-MAN ELEVATOR RUNNING TO THE 1,340-FOOT LEVEL



BECAUSE THE CABLES ARE NOT FLEXIBLE ENOUGH TO TURN SHARP CORNERS IT MAY BE NECESSARY TO HAUL THEM DIRECTLY ACROSS FIELDS ON A STRING OF TRUCKS WHEN GROUND IS FROZEN

ENGINEERS AND FOREMEN WILL LIE ON HOSPITAL-TYPE BEDS TO WATCH CONSTRUCTION OF TOP SECTIONS THROUGH FIELD GLASSES, USING TELEPHONE AND RADIO TO DIRECT WORKERS

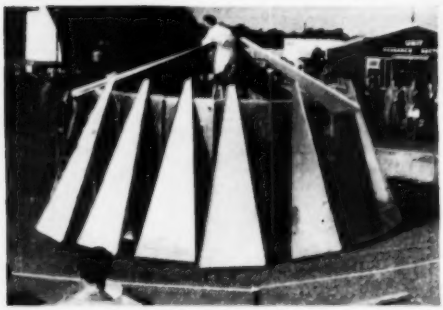
TOWER WILL PIVOT ON AN EIGHT-FOOT FORGING, PERMITTING IT TO TWIST WITH THE WIND

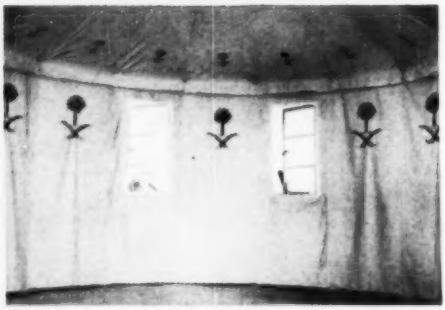
The tower is triangular in cross section, 12 feet on a side. The three legs are solid steel cylinders eight inches through.

Nine guy wires bracing the tower are as much as 4¼ inches in diameter—as thick as the cables on some suspension bridges—to protect it from high winds. They will be anchored in steel and concrete 900 feet from the base.

Four coaxial cables running up to the antenna are 6½ inches in diameter. And each ponderous 20-foot section weighs 1,600 pounds.

The tower alone will cost more than a half-million dollars. It will radiate 316,000 watts, or upward of 50,000 watts more than the next most powerful TV station in the United States. END





## Arabian Potentate Buys Prefab Palace for Hunting Trips

When the new King of Saudi Arabia goes hunting, his camels will pack a portable palace. Prefabricated in England of aluminum sheeting, the three-building structure with connecting passages is lined with hardboard to insulate it on cold nights.

To keep the atmosphere of an Arab tent, 70 green linen panels embroidered with the royal arms drape the interior. A shower stall fed by a 40-gallon water tank on a nine-foot tower adds a twentieth-century touch.

## Moth Balls Protect Radio Parts

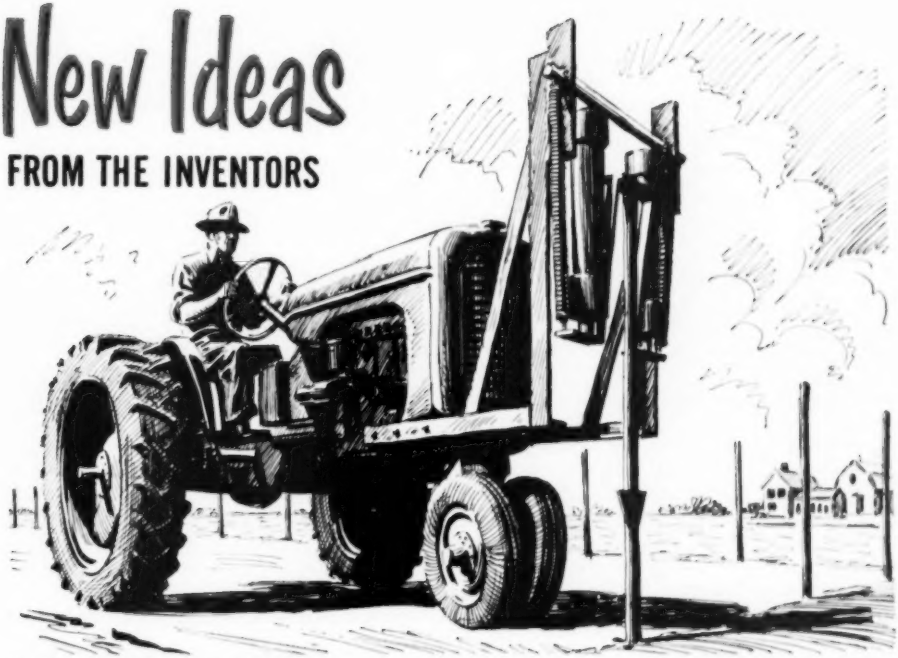
Scattering moth balls through silver-plated parts in storage boxes (above) makes assembly of radios easier for Motorola workers. The moth-ball vapor prevents tarnish, keeps parts bright and clean for soldering.

## Tiny Tractor Tows Two-Ton Car

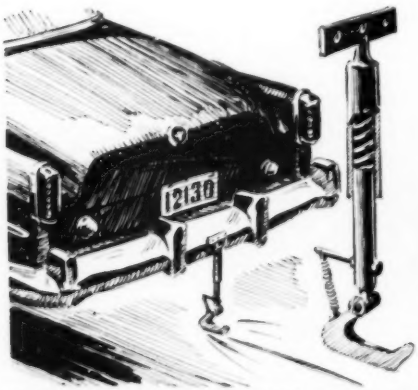
This working-model steam engine weighs less than 100 pounds but it can puff along pulling a 4,750-pound car. Complete in every detail from hinged firebox to tiniest valve, the mighty mite was built by Grant Goodfellow, garage owner of Grand Rapids.

# New Ideas

## FROM THE INVENTORS



**1 Ram to Drive or Pull Posts.** A farmer could fence his land faster if he had this tractor attachment to pull old posts and drive new ones. The bolt-on unit would take its power from the tractor's hydraulic system. The frame would support two invertible cylinders whose pistons or rams could be yoked to a fence post. The cylinders would be turned one way to lift the rams, inverted to force them down.



**2 Car Skate to Stop Skids.** A grooved drag shoe between the rear wheels might make a car track better on icy roads. This antisway device would slip in or out of a bracket bolted to the bumper. Its spring-loaded, telescoping rod would force the skate firmly against the ground but permit it to rise over bumps or high spots.

**3 Straight Dial to Speed Calls.** Faster phone dialing in the future may be made possible by this Bell Laboratories patent. The three-column, up-and-down drum would shorten the travel distance of the hand and reset itself much quicker. Simplified operation and easier-to-read numbers, it is claimed, would reduce dialing errors.

***Please turn the page for more new ideas.***

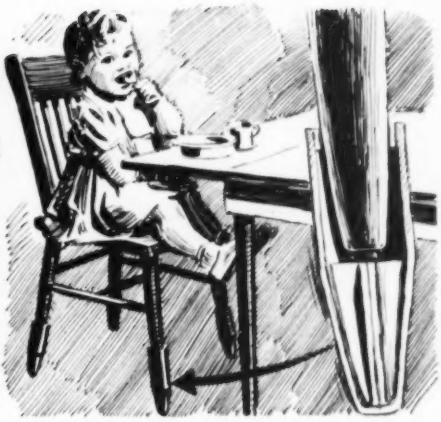
## *MORE* New Ideas from the Inventors

**4 Wheel to Warm Your Hands.** This heating element could take the persistent chill off the steering wheel on sub-zero mornings. A resistance wire molded into the plastic rim would be connected to the battery through a switch and temperature-control rheostat. Slider contacts in the hub would allow free movement of the wheel.

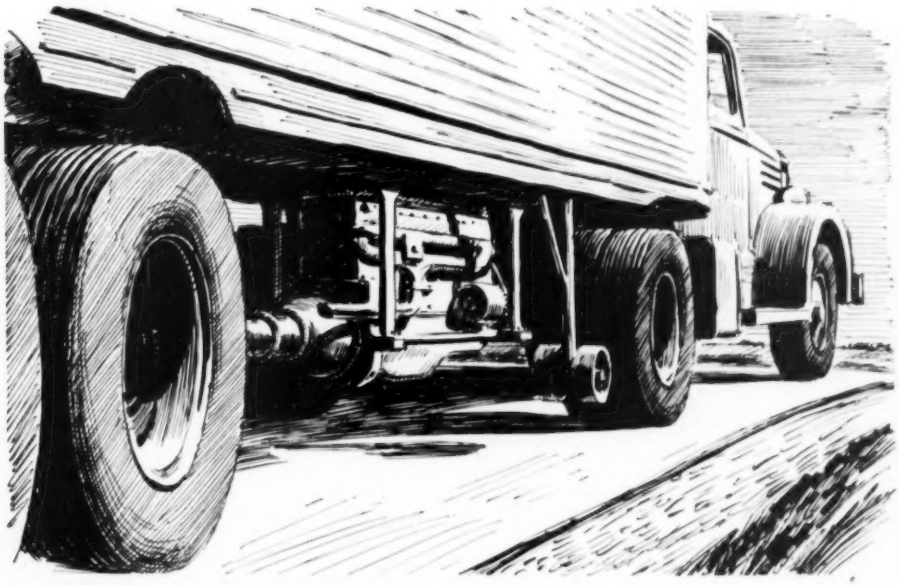
**5 Pin to Make Lock Pickproof.** This pin, key and spring-clip arrangement would make it hard for anyone to open the simplest back-door lock from the outside. The key couldn't be pushed out by a skeleton key inserted from the opposite side, nor could it be picked or turned while the pin remained in place.

**6 Vibrator to Rock the Baby.** The hand that rocks the cradle will get a little time off if its job is taken over by this spring-powered vibrator. A windup motor in the device would rotate a weighted, off-center flywheel so as to generate horizontal and vertical thrust. When hooked over the rim of a carriage, crib or cradle, the rocker would transfer the thrust in the form of a swaying motion. Its speed of vibration would be regulated by a governor. Rotation of the unbalanced wheel would be started by a counterpoised spring, stopped by a friction brake.

**7 Electric Mat to Wipe Shoes.** Powered brushes in this floor mat would sweep your shoes as you walked across them. Stepping on the metal grid would start a motor and oscillate the brushes through a rack-and-gear arrangement. The mat would be recessed flush with the floor. A removable tray would catch the dust.



**8 Leg Sleeves to Raise Chair.** You wouldn't have to prop a child on phone books if you had a set of these chair-leg extensions on hand. With them you could make an ordinary wooden chair pinch-hit for a high chair. Parents could carry them on family visits to keep thorny seating problems from arising.



**9 Trailer to Have Booster Engine.** A pusher engine on a trailer could supply the extra power most trucks need for uphill runs. This booster would drive the trailer wheels through a fluid transmission. Manual controls would be supplemented by a vacuum coupling from the truck-engine manifold to the booster throttle. A drop in manifold pressure (such as occurs on hard pulls) would automatically gas the pusher engine. Applying the brakes would close the throttle regardless of pressure.

*U. S. patents on these inventions have been granted to: 1. F. Lindquist, Webster City, Iowa; 2. A. Leslie, Shanesville, Pa.; 3. J. Madden, NYC; 4. L. De Langiano, Bronx, N. Y.; 5. E. Griesbach, Oak Park, Ill.; 6. G. Strom, C. Lichter and P. Rusinsky, NYC; 7. R. Ryzenga, Holland, Mich.; 8. A. Worgan, Manchester, Conn.; 9. I. Simpkins, Charlotte, N. C.*

# How the Missing Link

**Dr. Robert Broom with one of his ape-men skulls.**

*Theory of evolution is confirmed —and revised—by an amateur fossil hunter's recent discovery of the bones of ancient ape-men in South Africa.*

**By Ruth Moore**

*Copyright 1953 by the author*

WHEN, in the 1850s, Charles Darwin published his theory of evolution, with its startling implication that man had descended from some sort of prehistoric ape, outraged critics demanded proof: When? How? What happened to the creatures between ape and man? Where were the bones to prove that the missing links had ever lived?

Only now, 100 years later, do scientists have the answers.

Atomic research and wartime study of fluorine to prevent tooth decay have led to ways of fixing firm dates for hitherto undatable events of man's past. Recent anthropological findings show how the tremendous changes between primitive and modern man could have occurred in the relatively short time indicated by the new dates. And fossil experts have now accepted strange skulls found in South Africa, just before and after the war, as indeed those of a being less human than man but more human than the apes.

How this new evidence both confirms and revises the theory of evolution is explained in a best-selling new book, *Man, Time, and Fossils* (Alfred A. Knopf, Inc.) by a Chicago news reporter.

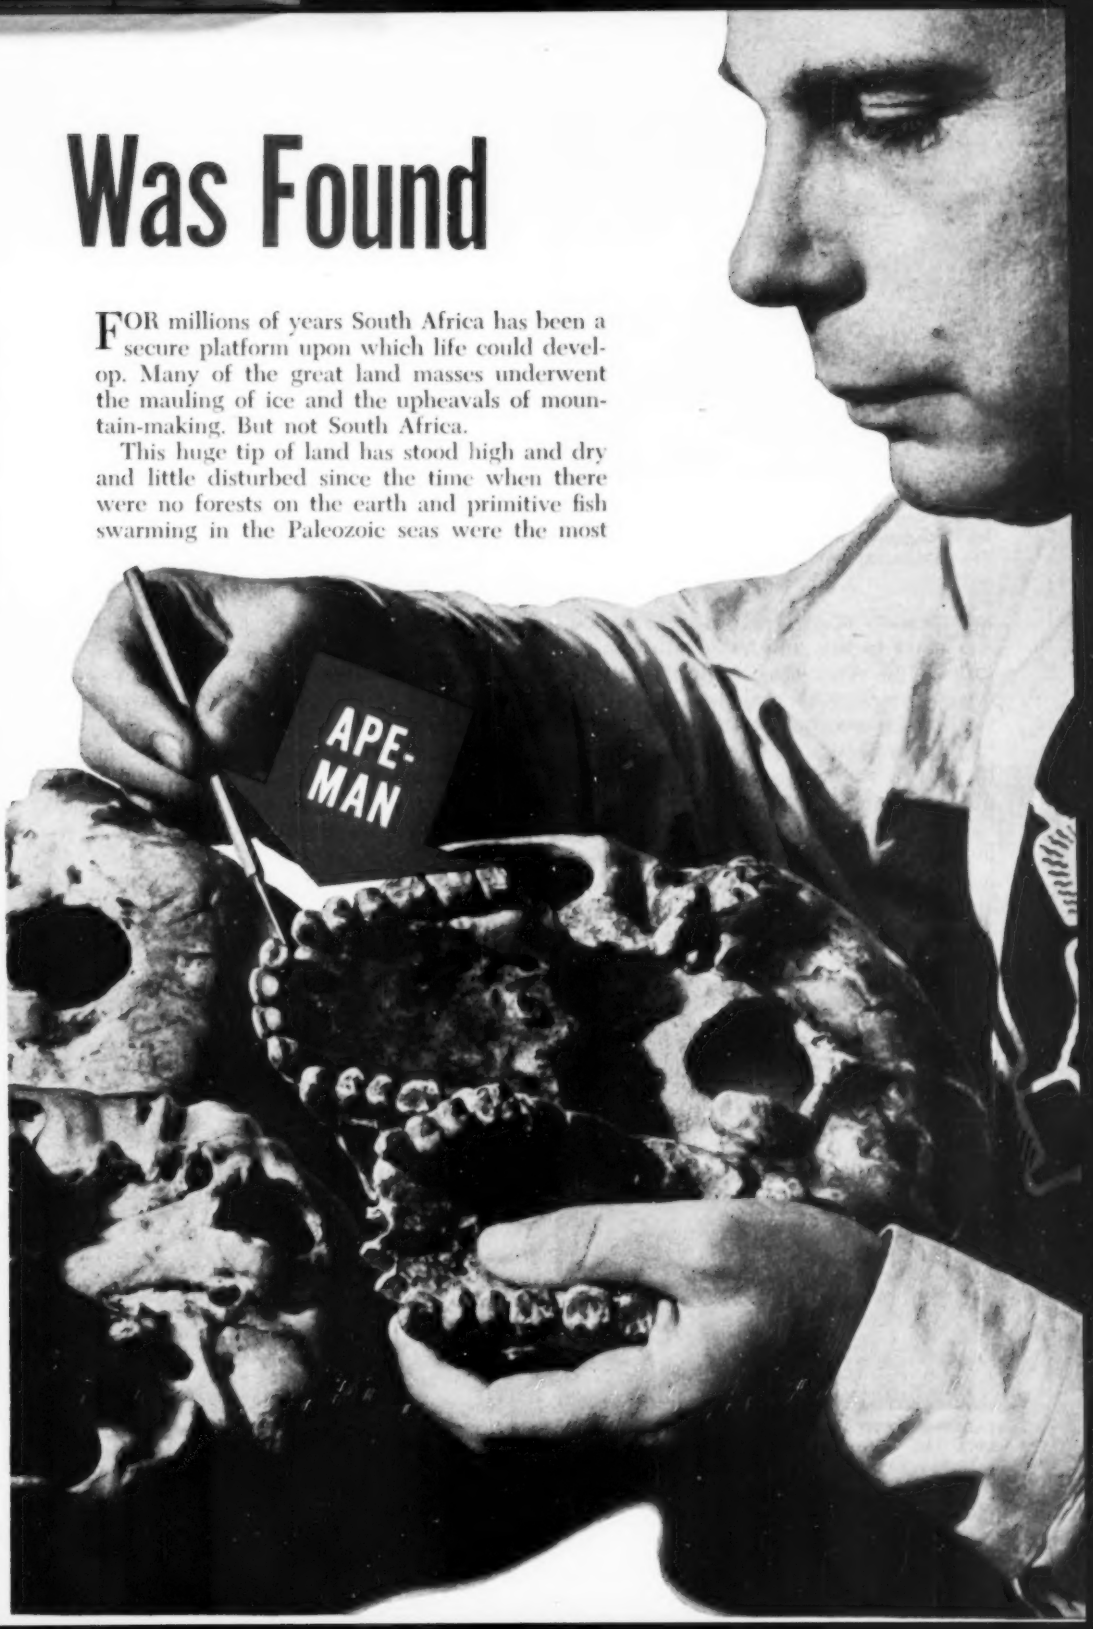
One of the most exciting chapters, condensed here, tells the amazing story of the man who found the missing link.

**TELLTALE TEETH: Paleontologist Dr. von Koenigswald points to "simian gap" in denture of early ape-man skull. Notice that this feature is even more prominent in jaw of ape but is absent in jaw of modern man.**

# Was Found

FOR millions of years South Africa has been a secure platform upon which life could develop. Many of the great land masses underwent the mauling of ice and the upheavals of mountain-making. But not South Africa.

This huge tip of land has stood high and dry and little disturbed since the time when there were no forests on the earth and primitive fish swarming in the Paleozoic seas were the most



**AT FOSSIL-EXCAVATION SITE in South Africa native workmen break up bone-bearing soil. In background, wearing coat, Dr. Broom is examining specimens that show bone.**

advanced form of life then in existence.

Thanks to this unusually stable background, the sprawling subcontinent between the Zambezi and the Cape might well have been considered a likely place to look for fossils dating far back, perhaps even to the misty unknown beginnings of man.

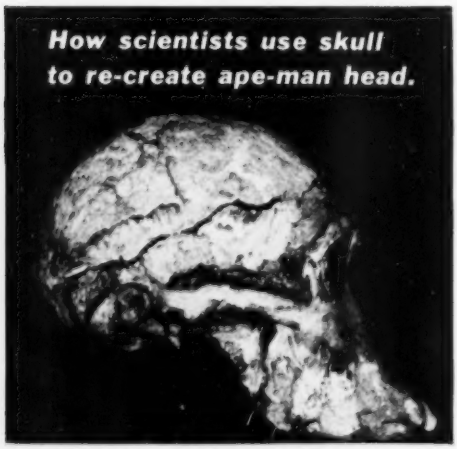
The obvious, however, is often overlooked. The world took little notice when baboon and ape skulls of types that had long since disappeared from the earth began to be found in South African caves. There was genuine surprise when a quarryman working in a lime deposit near Taungs blasted out a small skull that he recognized as unusual. It looked almost like that of a human. He sent it to Dr. Raymond A. Dart, professor of anatomy at Witwatersrand University, at Johannesburg.

As Dart cleaned it and studied it, his excitement grew. The face was almost complete. The lower jaw was there and also all the teeth, plus the whole of the right side of the brain cast. The teeth were milk teeth, with the first true molars just beginning to function. Clearly the skull was that of a young higher ape or apelike being, probably of a six-year-old. And it was a new type, Dart thought, allied to the ancestors of man.

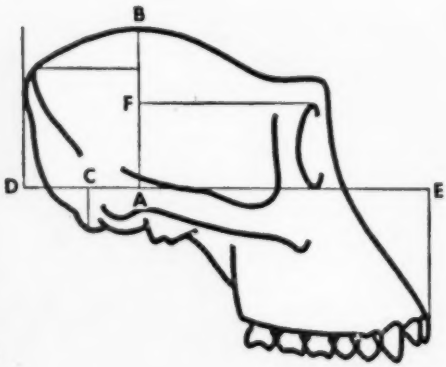
### *Anthropologists Were Skeptical*

The doctor rushed a notice of the discovery to London. In his preliminary report, published on February 7, 1925, was the following provocative—and prophetic—statement: "The specimen is of importance because it exhibits an extinct race of apes intermediate between living anthropoids and man."

The word "intermediate" and the claim that the little skull was that of a being between apes and men—what was



**STARTING POINT of reconstruction is part of skull. This almost complete specimen found by Broom is unusual. More often many fragments have to be identified and assembled.**



**SCIENTISTS MAKE COMPARISONS by laying out skull in precise measurement areas. Above measurements show skull height to be outside range of apes but within that of man.**

popularly known as the missing link—irritated and amused anthropological circles. If Dart had announced the harnessing of perpetual motion, or the cracking of the atom, or the completion of a round trip to the moon, the skepticism could not have been profounder. His little Taungs skull, they said, was only a variety of chimpanzee.

A local visitor, a part-time fossil hunter, came to an entirely different conclusion. He was singularly well equipped to judge, for he himself had made amazing fossil discoveries in South Africa. From a one-time swampland he had dug the fossils that for the first time actually linked the reptiles and the mammals.

**DR. BROOM DOFFED HIS JACKET,** usually worn at all times, to examine the thrilling find when perfect, whole skull of an ape-man was uncovered in lucky blast at Sterkfontein.

### *Dr. Broom Gets Interested*

This fossil expert was Dr. Robert Broom. Feeling sure that he had discovered the origins of the mammals, Broom often turned his thoughts to the origin of man. When he heard of Dart's discovery, it was not surprising that he hurried to Johannesburg.

There he spent several days studying the Taungs skull, and particularly the teeth. Their size and shape convinced him that the fossil child-ape was not closely related to such living anthropoids as the gorilla and the chimpanzee, but that in a number of characters it resembled man.

Dart was right, Broom decided with the quick-fire judgment that was typical of him. Furthermore, he felt certain that this was "practically the missing link," and the most important fossil find made up to that time. He wrote a paper saying so.

To Broom the fact that the large opening of the brain was situated more anteriorly than in the apes was an indication that the little ape-man child must

**LOWER JAW,** full dentures and other features have been added to make complete restoration of a *Plesianthropus* skull, based on specimen shown in photo at far left.

**RESTORATION DRAWING** of the Taungs six-year-old ape-man, first clue that a link between the anthropoids and man had been found, was made possible by this method.

have walked or run on his hind feet.

A restoration drawing of the head disclosed an engaging child. Although there always is an element of imagination in such a restoration, the drawing was based on the most precise skull measurements. The eyes, head, and ears looked human, the nose was a flat little button, and the lips protuberant.

Broom was consumed with eagerness to prove to the world that he and Dart were right. Unfortunately, he was still hampered in this desire by the necessity of making a living. His medical practice in the little town of Maquassi kept him well out of the range of the fossil caves.

Field Marshal Jan C. Smuts, the Prime Minister of the Union of South Africa, took care of this problem by offering Broom a post as curator of vertebrate paleontology and physical anthropology in the Transvaal Museum in Pretoria. Broom accepted, and at the age of 68 made his avocation his vocation.

**High winds drove sand and dust with such stinging force that Ed had to close all the car windows on the drive home. But there was no rain, and he covered the 20 miles in half an hour. His terrier Toby at once ran up to the car in nuzzling welcome. Lowering a window, Ed bawled an order the dog didn't obey. Then, although Ed had no thought of punishing him, the terrier ran and hid under the porch, whimpering.**

## ...How Come?

**Answer:** *Ed knew from experience that steady driving, wind-blown sand and dry weather had put a strong static charge on the car. Unheeding his command to back off, Toby stood up against the car and drew a stinging spark.*

Two of Dart's students who had read the reports came to Broom to tell him about some small baboon skulls they had found in a cave at Sterkfontein, about 30 miles from Johannesburg. Broom was at once interested and arranged to go to the place with the students on the next Sunday.

To the people of that section it was no news that there were fossils about. Since the first mining camps had sprung up during the Witwatersrand gold rush of 1886, boys had been picking up and making collections of the fossil bones of antelope, monkeys, baboons, and perhaps ape-men.

Broom and his student guides went first to a quarry where for many years a commercial company had been obtaining lime for its kilns. In breaks in the stone were many pockets of bone breccia, the composite deposit that contained the fossils.

### *Barlow's Find Was Rarer Than Gold*

It developed that G. W. Barlow, manager in charge of the quarry and the caves, had once worked at Taungs and knew about the skull. Broom asked him if he had ever found anything like it at Sterkfontein.

The following Monday Barlow produced a find that to Broom was more valuable than all the gold taken from the Witwatersrand mines.

"Is this what you are after?" asked Barlow, presenting the doctor with two-thirds of a "beautiful fossil brain cast." (The stone bore the exact impress of the brain that once had lain there.)

It was. At first glance Broom sensed that it was the brain cast of an ape-man.

Since it had been blasted out only that morning, Broom feverishly dug into the debris. He worked until dark, but found no more than the cast of the top of the head.

The next morning early he was back. And in three hours of digging, sifting, scraping, and moving big piles of rock he discovered all of the base of the skull, both sides of the upper jaw, and some fragments of the brain case.

When all the pieces were cleaned and assembled, Broom learned that, except for the lower jaw, he had most of the skull of a creature that obviously belonged to the same near-human family as the Taungs six-year-old.

Every week during all of 1936, 1937

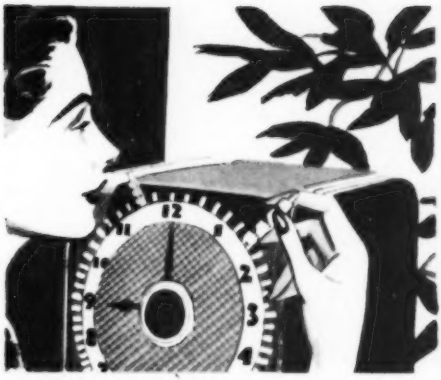
# I'd Like to see them make...

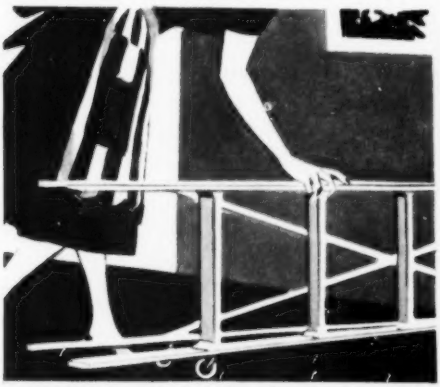
Everyone has his pet idea of a gadget he would like to see in general use. Here are five suggested by PSM readers. What is YOURS? We will pay $5 for each one published. Use postcards only. Contributions cannot be acknowledged or returned.



**CLOCK RADIO** with automatic station selector. Pre-setting notched controls would bring in successive stations without manual tuning.—*Mrs. W. M. Wikoff, Canton, Ohio.*

**HIGHWAY CENTER LINES** in color to indicate speed limit—blue for 40, yellow for 60 and so on. Curve and crossroad markings could be on road, too.—*A. Dickinson, Buena Vista, Ga.*

**CHILDREN'S BOOTS** and overshoes with zippers from top to toe so they could put them on and take them off without help.—*Mrs. A. T. Pohepic, Plymouth, Pa.*



**STEPLADDERS** with ball-bearing casters built into the sides. Moving them around would then be a simple matter for one person.—*Harry M. Segal, Atlantic City.*

**A SAFETY RAZOR** with a magnet built into the end of the handle so dropped blades could be picked up easily and safely.—*Verlon Denton, Grand Haven, Mich.*

# Gus Aids a Hot-Rod Jockey

**By Martin Bunn**

THE customers of Gus Wilson's Model Garage liked to stand around and chew the fat while getting repairs or a tankful of gas. They kept Gus well informed on the case of the burned-out connecting rods in one of the Sanderson brothers' trucks.

Considering the fact that Sam and Bill

*Young Howard was in a truckload of trouble and losing his*

*Gus ignored Sanderson's wisecrack and went calmly ahead with the job.*

Sanderson did their own repair work on their several trucks, and were rather proud of their abilities as mechanics, Gus didn't think it his place to shoot off his mouth on the matter. Whenever one of the customers would drop in and inform Gus that another rod bearing had gone out on the truck that Joel Howard was driving for the Sandersons, he would puff his pipe and say, "You don't tell me!" But when Joel Howard got fired, Gus began to get curious.

"What can Bill and Sam Sanderson expect anyhow?" Silas Barnstable inquired of Gus as he helped himself to free air at the Model Garage. "Hiring a harum-scarum kid like Joel Howard!"

"I figured," Gus said cautiously, "that Joel had sort of calmed down."

"Hah!" Silas snorted. "Those kind never calm down. Been scaring folks witless ever since he was old enough to build a hot rod."

The town had its share of youngsters who were a mite heavy-footed on the throttle, but they usually came out of it when they grew old enough to get dry behind the ears. Joel Howard had fol-

*bearings fast—if he lost any more his job was gone for good.*

lowed the usual routine, it seemed to Gus, only he'd done it earlier than most. He'd married before he was 21, become the father of a baby the first year, made a down payment on a home, and settled down to a steady job driving one of the Sandersons' trucks. That is, it was a steady job until three connecting-rod bearings went out on the truck, one after the other. The truck wasn't a new model, but Sam Sanderson had completely rebuilt it.

"He'll have a hard time finding another job around here," Silas was saying now. "And it'll just about serve him right."

"Oh, I wouldn't say that," Gus said placidly. "The boy's young, and he's got a wife and kid to care for. I'd like to take a look at that truck."

"Eh?" Silas exclaimed. "Well, why don't you?"

Gus thoughtfully tamped tobacco in his pipe. "Don't think they'd like it—the Sanderson boys. But I wonder if anyone's put a bug in their ear about how they'd feel if rods kept flying out of that truck with other drivers? Feel peculiar, wouldn't they, after firing Joel?"

"Hah!" Silas grunted. "Never thought of that."

As the old miser drove away, Stan Hicks exploded from the grease rack.

"The old sourpuss!" he raved. "Always glad to see someone have hard luck."

Gus couldn't get the deal off his mind as he worked. When it got noised around town that Joel had been fired, no one else would hire him to drive. And driving was all the kid knew.

### *Sam Brings in the Truck*

When Sam Sanderson drove the truck that had been causing all the trouble up to the pumps at the Model Garage that afternoon, Gus headed off Stan.

"Fill 'er up," Sanderson said. He had a grumpy look on his face.

After he'd paid for the gas and started the truck, he nodded toward the motor.

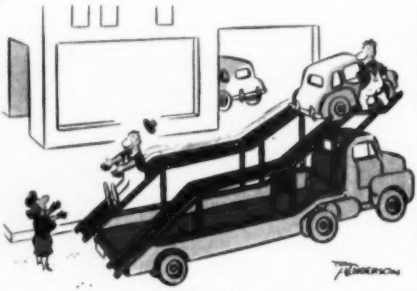
"Sounds sweet, don't she, Gus?"

"Like a kitten," Gus told him. "A pity she throws rods."

"She don't—" Sanderson snapped, "not when she's driven halfway right. But a hot-rod jockey would ruin any truck."

"How right you are," Gus said placatingly. "Still, I've known trucks that threw rods, no matter how you drove them."

"Look here, Gus," Sanderson burst out. "I overhauled this truck from stem to stern. I put in new rods and mains, and I put in the rods Joel burned out: number six twice, and number five once. And if you think the shaft is flat on those two throws, you've got another guess coming. I miked 'em."



"Rosemarie!"

"That so?" Gus asked. "Sounds like you fellows did a pretty careful job." He shook his head solemnly. "No sir, I guess there isn't much I could do then, seeing as how you fellows could hardly have missed anything, if you were as careful as all that."

Sanderson's features held a look of exasperation, and then a faint grin crinkled the corners of his mouth.

"All right, all right, Gus," he said. "I'll drive the old heap inside. If you don't find anything wrong, you buy the coffee."

"Sold," Gus grinned.

Gus didn't waste any time after the truck was in the garage. He put a tray of tools and a clean drain pan within easy reach, slid under the truck on a creeper, drained the oil. Before the oil had stopped dripping Gus had the drain plug back in and the pan dropped. He reached out for a pair of side cutters and a power bar. He snapped on a three-quarter socket, and put heft to the bar.

"Hey," Sanderson protested. "What are you doin' with that three-quarter socket? The rods take nine-sixteenths.

[*Continued on page 254*]

## Steno Talks into Mask to Record Meetings

THE stenographer does the dictating with this new method for recording conferences and court proceedings. She simply repeats every word spoken, and describes actions, into the mask she holds to her face. Lightweight and soundproof, the mask contains a small microphone and is connected to a standard office dictating machine. After the meeting she can type the proceedings she recorded. The Stenomask, used by the armed services to record courts-martial, was developed by the Dictaphone Corp., 420 Lexington Ave., NYC.

## Hats with Smog Masks Are the Style in London

MILLINERS in the British capital were ready for this winter's "killer fog"—it caused 4,000 deaths last year—with anti-smog hats. The decorative mask fits tightly over nose and mouth for protection, and can be flipped back when the weather clears.

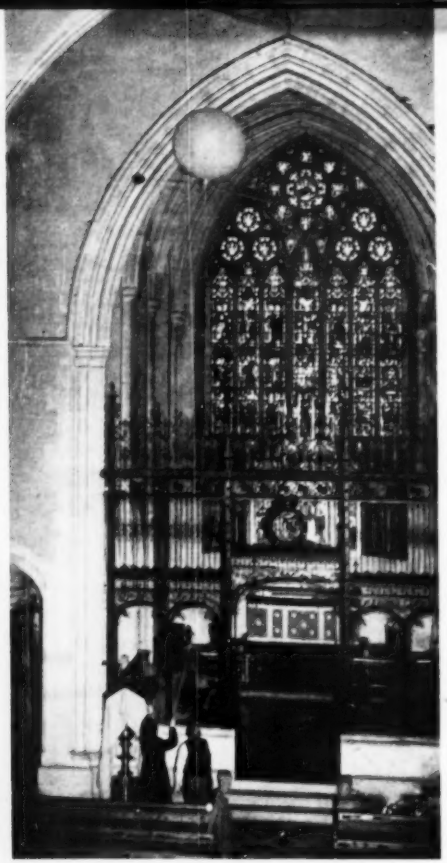
## Dogless Dog Sled Makes Tracks Over Trackless North

THE romantic husky of the far north may go the way of the farmer's old dobbin. With this new snow tractor in front of his sled, the northwoodsman can mush over miles of snow or ice nearly as fast and as easily as a city man drives to work. The tractor has 10 speeds forward, plus reverse, and can pull as much as a ton over rough terrain. The Highway Equipment Co., 616 D Ave. N. W., Cedar Rapids, Iowa, makes it.

## Now Seamen Ride to Work

CREWMEN of 51 new oil tankers won't have to climb swaying companion ladders to go aboard or set up gangways to take on supplies. Outside elevators that hang steady even on a listing ship will lift six men or half a ton of material overside. The tankers are being built in Britain for the Shell Petroleum fleet.

▶▶▶New eight-sided mothballs with center holes slip over a coat-hanger hook. The Koppers Co., Pittsburgh, calls them Octans.



## Balloon Dusts a Church

COBWEBS on the ceiling are more trouble than bats in the belfry if a church has a soaring arched roof. But at St. John's in Surrey, England, they worked out a floating duster and didn't rig a scaffold. A brush hoisted aloft by an RAF weather balloon was swept back and forth by guide lines manipulated from the floor.

▶▶▶The two highest-flying monkeys on earth—they went up 200,000 feet in a rocket—are now on display at the Washington Zoo.

## Memo Pops Out of Mirror to Remind Driver of Servicing

A DRIVER can't forget to have a grease job done, change the oil or check other vital points on his car when a card is dropped into his lap to remind him that servicing is required. A new recorder built into a rear-view mirror keeps tabs on the number of hours the engine runs and pops out reminder cards as work is due. Carter Galantin, 105 West Monroe St., Chicago, developed the mirror-recorder.

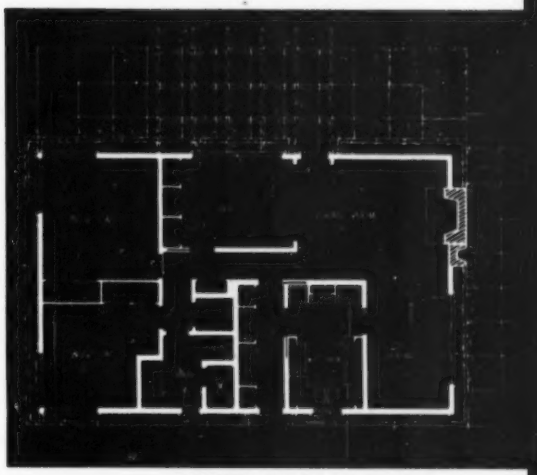
*Young Californian's prize-winning design puts*

# A Lot of House in a Small Space

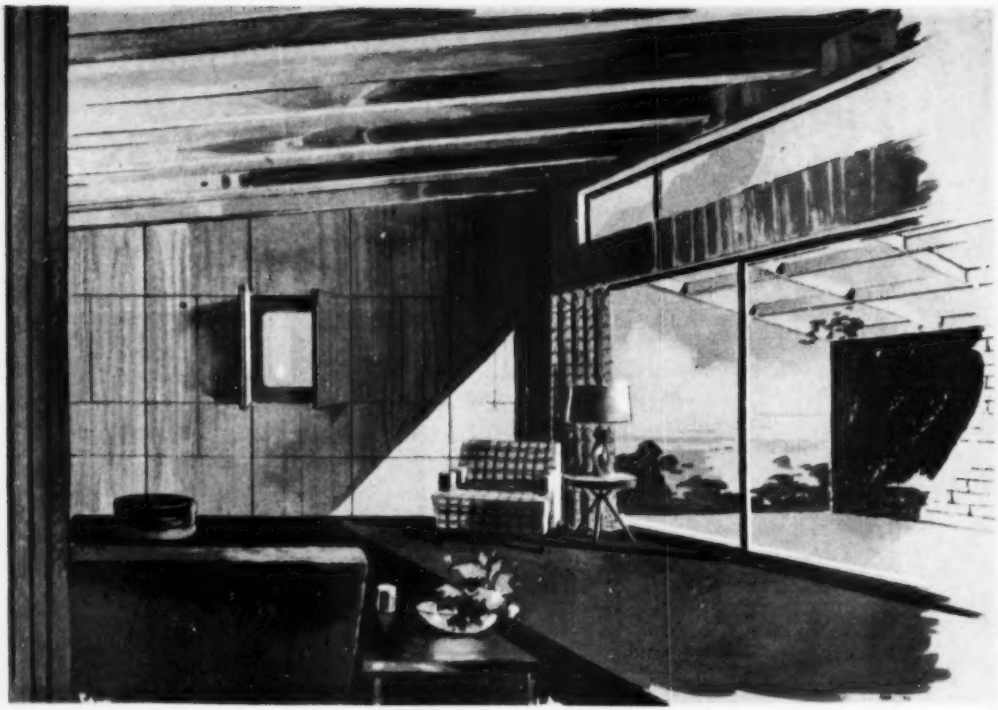
KENNETH KOOY is an amiable youngster who three years ago showed an almost elaborate lack of interest in mechanical drawing and architecture. Today, at 18, he's the champion small-home designer in California's San Fernando Valley.

Last spring the local building-contractors' association announced a contest open to high-school students only. Fifty students signed entry blanks. Ken licked his pencil and started sketching. Eight weeks later he got the word—and $300 in defense bonds.

"Your house," the awards committee told him, "shows clean contemporary design, excellent orientation to physical



**EIGHTEEN-YEAR-OLD** contest winner, Kenneth Kooy, compares his design (above) with the house erected by builders.



Living room and TV-area are flooded with daylight

problems, utilizes floor space to the maximum and shows a fine regard for modern building techniques."

In other words, it was a swell house. Now his little gem of architecture, covering 1,238 square feet, stands on a 55-by-115-foot lot among 21 new homes on Petit Avenue in Van Nuys. The association built Ken's dream.

***Making $10,000 Go a Long Way***

For the price specified—under $10,000 without the lot—what the builders' association asked for was tough:

Area, 1,150 to 1,250 square feet;

Two bedrooms and den, or three bedrooms;

At least one fireplace;

Sliding steel sash to outside;

Steel sash throughout;

At least one sliding interior door;

Steel kitchen cabinets, formica tops;

Tile walls and floor in the bath;

A stall shower;

A built-in gas range and oven;

Floors of concrete or oak;

A setback of 25 feet, a side yard, no alley, and a double garage 20 by 20 feet, attached or detached.

It had to be a one-floor house.

Ken studied the specs. He leafed through books on architecture. During class hours—mechanical drawing in Van Nuys High School—he developed a floor plan. Around it he built up elevations and a roof plan.

The result might be called a typical California house—price $8,500, plus $4,000 for the lot, plus $6,000 for many installations intended to demonstrate what the modern, labor-saving home should contain.

These include air conditioning, temperature controls, soundproofing and special kitchen equipment.

The structure is built on a three-and-a-half inch concrete slab poured over four inches of fill rock. Two 15-pound

Huge fireplace adds note of luxury

felt pads hold the moisture down. There's no basement.

Ken Kooy—all six feet, 4½ inches of him—wanted no part of drawing when he enrolled as a freshman in high school.

His educational adviser said, "You'll have to take drafting."

"That floored me," Ken recalls. "I simply wasn't interested."

But he did all right, receiving straight A's for the course. He discovered he liked drawing. And his instructor found an unusually professional technique flowing from the boy's pencil. Ken really got good. Presently he started drawing house plans for a local contractor.

Now in the second semester of his freshman year in junior college, Ken hopes to take a university course in architecture or building administration.

For the moment he is slightly staggered by his fame. Plans for his "high-school house" have been sought by people as far away as Virginia and Florida. —*Andrew R. Boone.*

**All About Glass**

# How to Buy It

***Take these tips—to get the right glass for the job and the most for your money.***

A HOME builder can get a little or a lot for his money when he buys glass for windows, doors and partitions. It's worth his while to know which glass will do what, and how to buy it. Then he won't pay double or triple prices because he's put in plate where heavy sheet glass would have done as well, or ordered glass by the sheet instead of by the case.

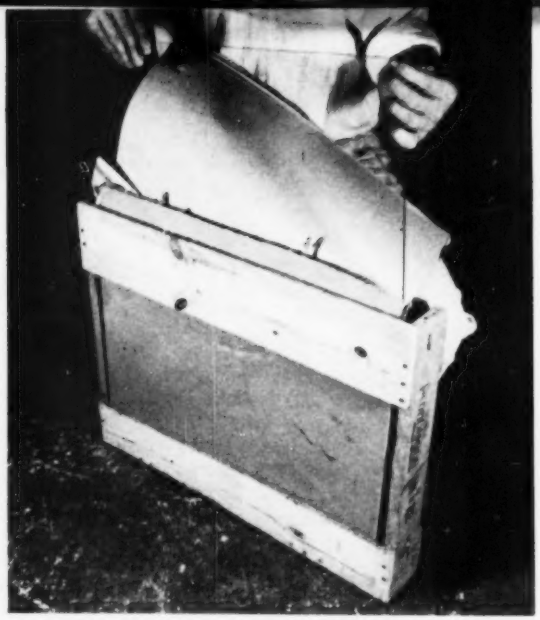
*Window glass*, often called sheet glass, is the usual thing. In most houses, it was the only kind, before window walls and picture windows came in. It comes in two thicknesses, single strength and double strength; and in two qualities, A and B.

A and B differ only in the number of small defects and waves. You'd have trouble telling most sheets in a lot of B quality from A. In fact, many dealers don't stock A quality because they don't think it's worth paying 25 percent more for. A home builder gets along without it very well.

Whether to use single or double strength depends mainly on window size. To play safe, a good rule is to use double strength for anything over about two feet square.

***How large can double strength be?*** That's important because of a sharp price jump in the next step, to crystal sheet or plate. The answer is that, if winds don't exceed 70 m.p.h., safe sizes for double strength can reach 38″ by 48″, or 34″ by 72″. Especially for this article, a glass-company engineer worked out the calculations leading to the dimensions given.

You can use these figures to work out an attractive window wall at about one-fourth the cost of the big sheets of plate glass. Go right across the room with 30″-by-72″ double-strength glass placed vertically. The distance of, say, 30″ to the floor can be plain wall or used for built-in bookcases or ventilating louvers.

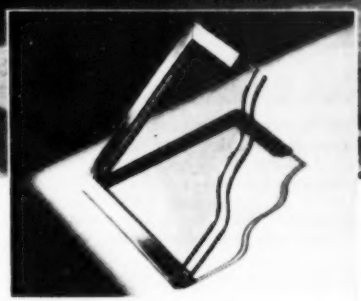


**ECONOMICAL WAY to buy window glass is by the case. That cuts its price almost in half, and makes it easier to handle, too. Except in very large sizes, a case contains enough sheets to make approximately 50 square feet —for example, eight 24″-by-36″ sheets.**

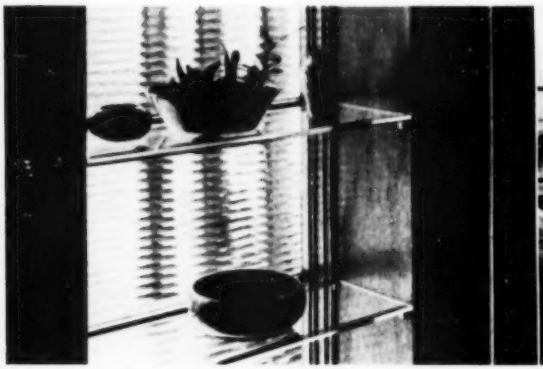
**PLATE-GLASS TOP finishes this table handsomely. To order glass for rectangular one, dimensions are enough. An irregular shape should be traced on sheet of stiff paper.**

***Cases save money.*** Buying window glass by the case is one way to save money. Glass by the case costs little more than half as much as by the sheet. And it's easier to handle.

Let's look at actual figures, based on



**INSIDE, LOOKING-OUT** view above dramatically compares the frost-free double-glass window at left with pair of ordinary plate units. Inset shows the sealed air space that is built into double-glazed units, providing valuable heat insulation and preventing condensation.



**USE PATTERNED GLASS** in home wherever light is wanted without transparency. There are many new patterns: wide and narrow corrugations, stipples, ribs and diamond designs.

**HEAT-ABSORBING PLATE GLASS** makes windbreak for terrace of seashore home, at Malibu Beach in California. Panes of this type, slightly tinted, filter out sun's infrared rays.

current prices for single-strength B glass (abbreviated SSB), and double-strength B glass (DSB), in one locality, northern California. (To facilitate comparison, all prices of other types of glass mentioned subsequently are for the same locality.)

By the sheet, in this region, SSB currently costs 41 cents a square foot; by the case, only about 21 cents. DSB costs 59 cents a square foot by the sheet, but only about 33 cents when bought by the case.

Thus, while four sheets of 24"-by-36" DSB would come to $14.16, a case of eight sheets costs $15.90, which is little more.

At such economical prices you can afford to use glass liberally in anything you build or remodel or enclose. And, buying glass by the case doesn't mean you're stockpiling it for years to come. Usually a case of window glass is whatever number

**NOVEL USE** of transparent mirror glass, which has no opaque backing, is to cover a recessed light in a bathroom. With the light off, you have a mirror. When the light is turned on, as above, it shines right through. (What makes the reflection seen in the photo is simply the light used in taking the picture.)

of sheets comes nearest to totaling 50 square feet. Cases of very large sheets contain 100 square feet.

In furnishing these facts and figures, an experienced builder comments, "For my money, DSB by the case is a best buy. I use it for practically everything."

*Crystal sheet*, heavy window glass of good quality, is the economical thing when the opening is too big for double-strength. It costs 60 to 70 cents a square foot.

*Plate glass*, polished nearly to optical perfection, may be ⅜" thick or, for a big view window, ¼" thick. It costs $1.25 a square foot, and a bit more in sizes over 50 square feet.

Do you need it, or not? If the view from the window is a short reach of your back yard, use crystal sheet—you'll never notice the slight waviness. If your view is of the ocean, or the next county, it calls for plate.

For plate and usually crystal too, in sizes bigger than you can handle and too expensive to risk breaking, you must figure on paying a higher and variable installed

# Glazing the Easy Way

***To build windows and window walls, "fancy" professional method is simplest and best.***

**1 TO FORM RABBETS,** rip ¾" strips from one-by-fours, saving the strips. Nail on the narrowed one-by-fours, with their inside edges flush with the edges of the two-by-fours.

**2 SEAL WOOD** with prime coat of paint or natural finish; then run a bead of gun-grade glazing compound. (Putty knife and compound or soft putty are okay but slower.)

price, which includes expensive labor cost.

*Heat-absorbing plate glass*, while no substitute for air conditioning, does screen out quite a lot (29 percent) of the sun's heat. It's used in west windows of seaside homes, as well as in car windows. Cost is about 2½ times that of ordinary plate.

*Obscure glass* is fine for a window with a view you're better off without. It makes partitions, too, where light is wanted but visibility is not. A wall of it may be just the thing for a basement recreation room, if part of the basement is used as a garage. For this you'd want the thick variety, say ⅜". Thinner figured glass serves for entrance panels, cupboard doors and shower enclosures. Prices range from perhaps 60 cents a square foot for ordinary obscure glass to $3 or more for the heavy structural types.

*Transparent mirror glass*, used for one-way vision in entrance doors, has other interesting possibilities (see photo). Ready-made it costs about $6 a square foot, but a glass dealer who makes mirrors can usually prepare it for you at about half that price.

## All About Glass

*Insulating glass* is the modern, vastly superior replacement for an ordinary window plus storm sash. By preventing escape of heat from a house, it makes it comfortable to sit near a big window on a cold evening. Like any insulation, it usually pays for itself over the years in fuel savings as well as comfort.

It consists of two or three panes sealed in units, with air spaces between the panes. A typical double-glazed unit has two sheets of quarter-inch plate glass with a half-inch air space between. This type costs around $3.25 a square foot.

Originally all insulating units were of plate glass, but now you can buy this kind of glazing in window glass, too. Unless you need large panes, you can save about one-third by using the window-glass kind.

WHEN it comes to building a window or a window wall (far left), the fancy way is the amateur's best bet. It gives a really superior job, works with panes of any size and takes hardly any skill at all.

Usually glass is set into a frame, held with glazier's points, then sealed with putty. This takes practice and if it isn't done just right, it may not last.

The method advocated calls for backputtying and setting wood stops. Professionals use it for big windows or de luxe installations; when they do, it costs more. But it's the ideal do-it-yourself way, simple, foolproof and much better looking.

Use dry lumber of good quality (in photos, redwood), as some will show. Begin a window wall by building a frame of two-by-fours, with openings ¼" bigger each way than glass size, and proceed as below.

**3 PUT GLASS INTO PLACE, pressing gently all around until glazing compound fills space between glass and wood. If putty is used, worked-in paint thinner will avoid stiffness.**

**4 NAIL IN THE STOPS, the leftover strips, after priming them. If window catches much rain, make sure pushed-up putty forms seal between glass and stop. Add more if needed.**

**All About Glass**

# How to Cut It

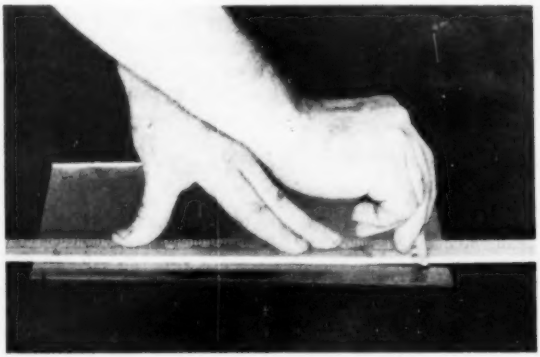
***Even a beginner can use a glass cutter like an expert by applying these rules.***

**1 TAKING PAINS** pays off. Clean the glass, if it's not brand-new. Use well-kept or new glass cutter: the best is inexpensive, and an inferior, cheaper one is a false economy.

THESE things are all you need to cut glass like an expert: a good glass cutter in first-class condition, care in following the rules and plenty of scrap glass to practice on. Most of the secret of glass cutting is the experienced, confident touch that comes quickly with practice.

In using the cutter the whole idea is to scratch a uniform, unbroken line along the surface. Then the glass parts easily in your hands when bent at the scratch. (Science says tension is what breaks glass and *the crack always runs at right angles to the tension.* So, apply tension exactly crosswise to a scratch for clean breaks.)

To part glass ¼" or more thick, lay it on cloth or papers, scratched side down; lightly tap a cold chisel resting over the scratch and aligned with it, using a *small* hammer. Repeat at other places if necessary.

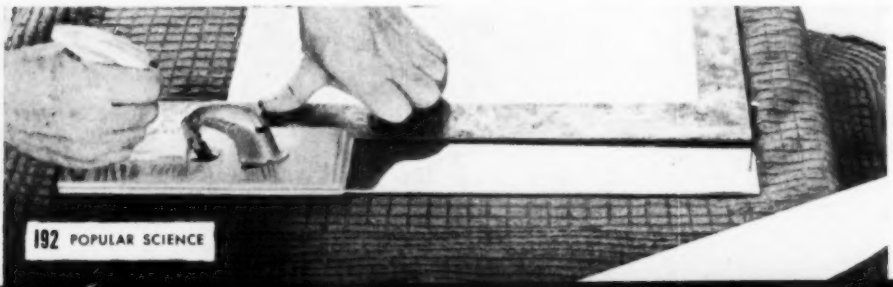


**4 DRAW CUTTER** across glass with firm but not heavy pressure. Start 1/8" from one edge and run right off other edge. Yardstick, wetted so as not to slip, serves as a guide.

## "Plane" Applies Cutter With Just-Right Touch

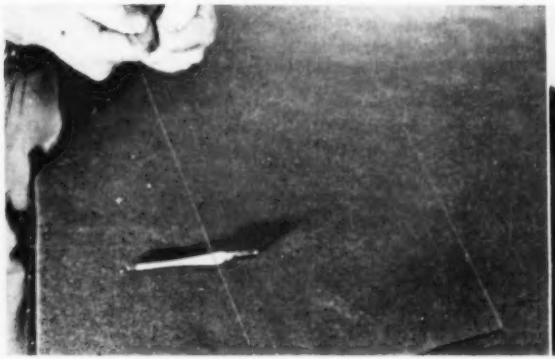
HELD down on a pane and pushed, this tool automatically cuts glass with correct, even pressure. To make it, remove roller from a screen-door closer and squeeze metal nearly together in vise. Insert sawed-off glass cutter, drill holes and rivet with nails. Mount on plywood, holed to let cutter wheel protrude about ⅛" beneath, and add handle. Draw line to front to show where cutter is.

**TOOL MOUNTS** spring-loaded cutter on two-by-six-inch base of half-inch plywood.

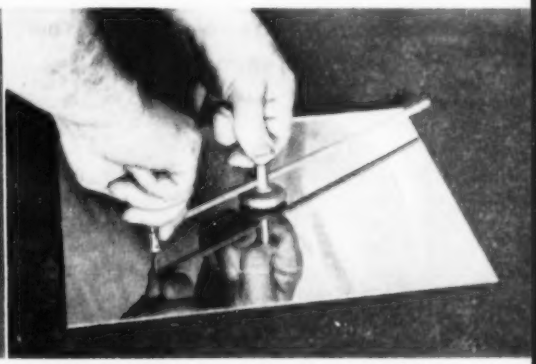


2 **LUBRICATE WHEEL** of cutter with any household oil before use. This serves a double purpose, helping wheel turn freely, and aiding cutting action by spreading oil upon glass.

3 **HERE'S RIGHT WAY** to hold cutter—between first two fingers, thumb beneath. When drawn along glass it should be raised nearly vertically, as shown in the next picture.



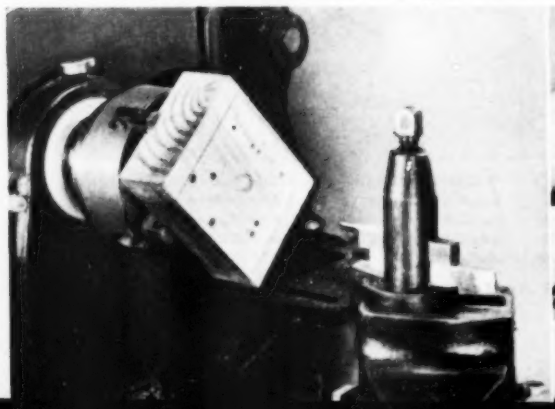
5 **WHERE SCRATCH ENDS,** gently bend glass downward on each side, and it will part. If strip is too narrow to grasp, break it off with flat-jaw pliers or slot of glass cutter.



6 **TO CUT CIRCLES,** special cutter resembling compass is used. Then regular cutter makes radial lines from circle to edges. One at a time, outer sections are removed.

## Here's a Way You Can Cut Small Glass Disks on Your Lathe

When you need a glass disk for a meter or flashlight, try cutting it on your lathe. True up the face of a wooden block with a freshly sharpened round-nose bit, undercutting the center. Attach the glass blank to the block with rubber cement (left below). Score a circle of desired size in the glass with a carbide-tipped bit. Remove the blank and trim by breaking off excess glass with pliers (right below).



# How to Repair Auto Glass

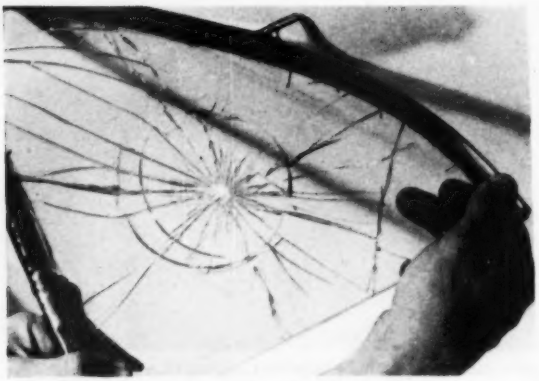
***Replacing a broken car window yourself will save you dough—and here's the way to do it.***

It's a howling winter night, as luck would have it, when your key chain breaks and you lose your car keys in a snowdrift. You break a ventilator window to get in, short the ignition to get home—and next day you learn the cost of replacing safety-glass car windows. It comes high.

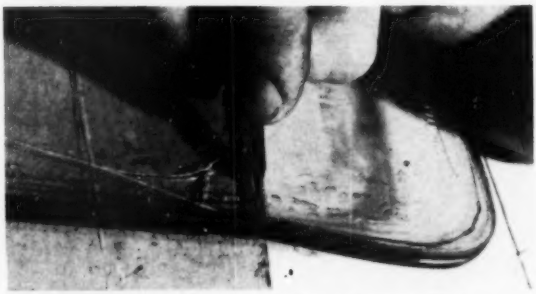
But many wrecking lots sell safety glass for a few cents, or give it away. Knowing the trick of working with it, and replacing broken or cloudy car windows yourself, will save sizable bills. Pictures on these pages reveal the secrets, learned from a junkie who was doing a brisk business in making new windows from old.

Safety glass consists of two pieces of high-quality glass with a plastic layer between—so you can't cut through from one side. When you try cutting both sides, there's still the baffling problem of getting at the tough plastic. For straight cuts the answer is to bend the fracture over the edge of a board, opening the cut enough to cut the plastic with a razor blade. On curves, a coil of resistance wire laid over the cut and plugged into the house current for a few seconds softens the plastic with heat. Then the glass practically falls apart by itself.

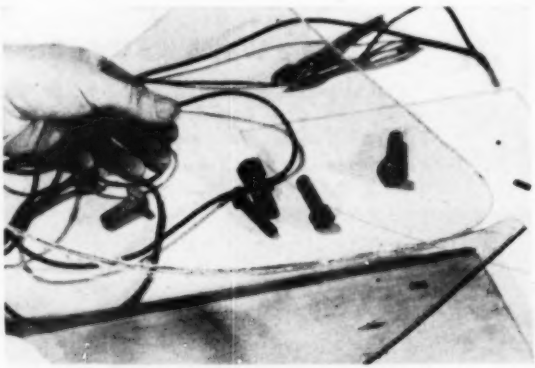
You can use salvaged safety glass around the house, too. Medicine-cabinet shelves made of it won't scatter razor-sharp fragments if the kids break them. Elsewhere it can serve instead of costly plate glass.



**1 REMOVING BROKEN VENT** from its frame is easy after you have removed the assembly from car. Spring the frame open enough to loosen edges and ease out the cracked pane very gently, so it can be used as a pattern.

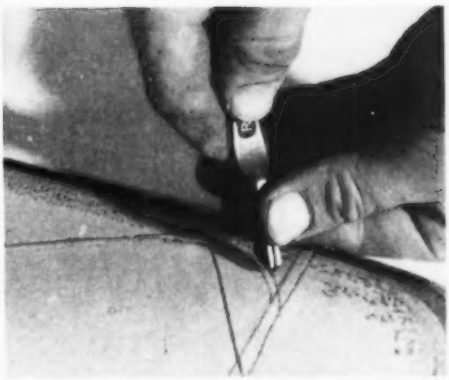


**4 STRAIGHT PART** of cut is flexed over board to open fracture, and razor blade drawn through it cuts the plastic. The scrap glass used here has bubbles around edge, but usable portion is enough to make new pane.

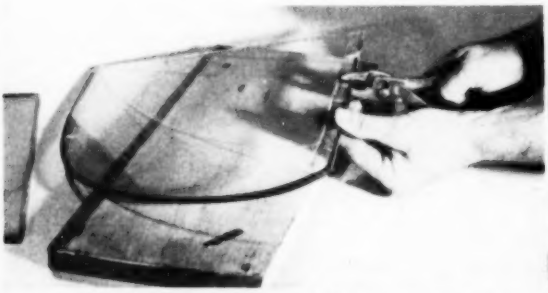


**7 AFTER COIL IS PLUGGED IN,** heat softens plastic in five to 10 seconds. Pull plug quickly, and pick up glass as above. Pieces should now pull apart, or separate enough to insert razor blade. If not, apply heat again.

**2 TRANSFER OUTLINE** to paper. If window is too badly damaged to serve as pattern, use a piece of cardboard, after shaping it by cut-and-try method. This must be done accurately if replacement pane is to fit.



**3 LAY NEW PANE** over pencil outline and cut each side of laminated glass, by following outline with standard glass cutter. Note that straight cuts continue past curve to edge, to assure breaking in right places.



**5 PLIERS NIBBLE** along strip too narrow to respond to hand pressure, in order to fracture glass and open cut, so razor blade can be inserted. Alternate procedure could use hot wire along score mark as in next view.

**6 AT CURVES,** nichrome wire coil (from junked heating appliance, or available as replacement element) is laid along scored and fractured cut, and connected in series with extension cord. Bolts hold it in place.

**8 ABRASIVE PAPER** smooths sharp edges. Use coarse grade for fast job on unexposed edges only, as it may chip them. Smooth ones need polishing with medium, then fine grade. Used paper from a floor sander works fine.

**9 TO HOLD GLASS** in frame, you can buy fabric-base strip at car-body shops, but rubber electrician's tape will do. Trimming edges neatly is last step. In this case, glass cost nothing; total expense was for tape.

**All About Glass**

# How to Have Fun with It

***Assemble this simple electric bottle cutter and enjoy the hobby of glass craftwork.***

**HANDSOME FRUIT BOWL was cut from a large bottle. Brass strips attach wooden handles. Possibilities of bottle craftwork, limited only by hobbyist's imagination, include glasses and steins, flower vases, pretzel dishes and smoker's articles. Bottles yield many utility items such as paint and brush containers and wide-mouth glass funnels.**

ONCE you discover how easily you can cut bottles in two, and turn them into bowls, ash trays and other craftwork, no bottle in the house will be safe from you.

A sure-fire electric bottle cutter has now been devised, simple both to assemble and to use. It even eliminates scratching a line with file or glass cutter around a bottle to be cut—a necessary preliminary in methods used before.

Looped around the bottle, an electrically heated strand of nichrome wire does the cutting. A support for the wire, and means to keep the flow of current under control, complete the device.

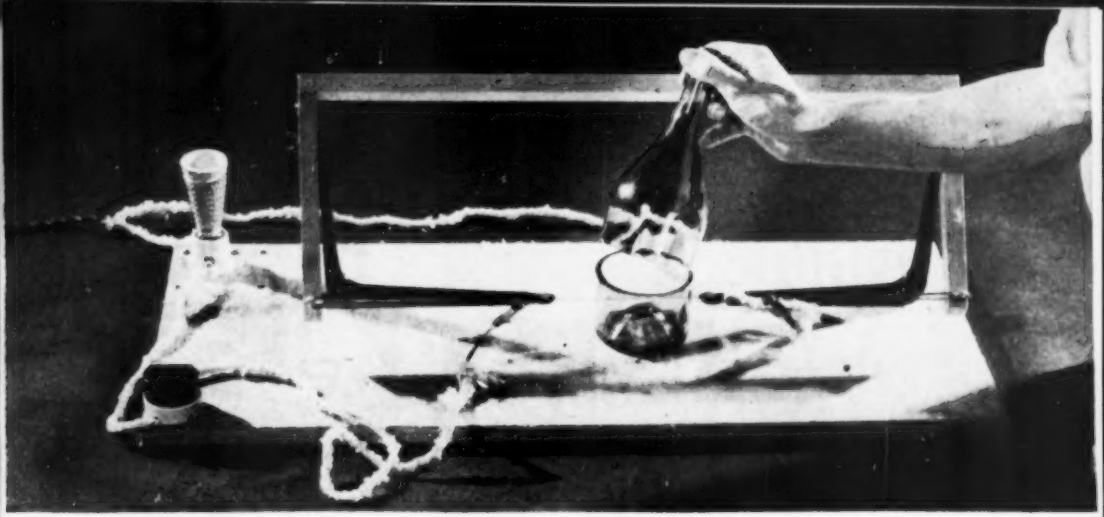
***For the nichrome wire,*** obtain a 600- or 660-watt replacement heating element for household appliances, which costs a quarter or less. A 660-watt cone heater unit (about 60 cents) makes a current-controlling resistance unit; and a porcelain socket for it, a pair of clip-on terminals, and some heater-type electric cord with a plug are the remaining electrical items to rummage for or buy.

Straighten the coiled-up nichrome wire by stretching it and then, grasping one end with pliers, by drawing it through vise jaws or between blocks of wood in a vise. As needed, lengths may be cut off to suit the size of bottles to be cut, which may range from tiny vials to one-gallon jugs. Connect up the cone heater unit, switch and clip-on terminals in series, or so that current will flow through each in turn. (See diagram.)

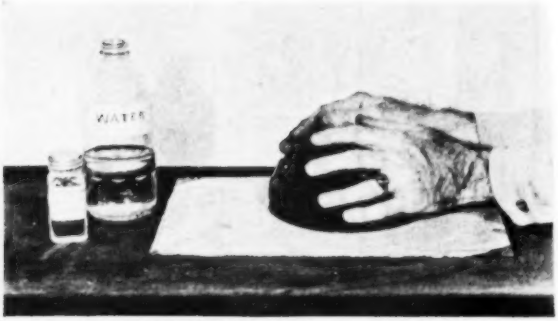
***A light wooden frame,*** pivoted to brackets with small bolts and wing nuts, supports the wire and adjusts it conveniently to any desired height. To draw the wire loop taut around a bottle, the ends of the wire (which don't get hot) may be hooked to the frame with inelegant but effective rubber bands.

For use, detach one end of the wire, loop it around the bottle and refasten it. Adjust the loop even and level—except that its beginning and end must *not quite touch.* (If they do, current will bypass the loop and it will fail to heat.) Clip the terminals to the wire near the bottle, one on each side of it. Then snap the switch to "on." The wire, or its free part at least, should glow red-hot.

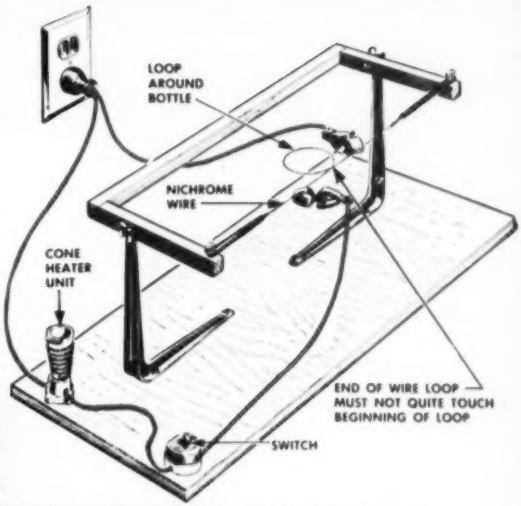
Soon the bottle may snap of its own accord. If it doesn't, say within a minute, apply one or more drops of cold water from a medicine dropper—right at the hot wire—and it will. Then *turn the switch right off* to prevent accident from a forgotten hot and live wire. Finally, smooth the edge of the cut piece with Carborundum powder, moistened with water, in the way illustrated.



**ELECTRIC BOTTLE CUTTER** severs glass with hot wire, as above, yielding pieces to be turned into decorative and useful objects. Anyone can quickly assemble device at small cost. U-shaped wooden frame, pivoted in brackets, supports cutting wire at adjustable height. Looped around bottle, wire is drawn taut by rubber bands attaching cool ends to frame.



**FIRST THING TO DO** after cutting bottle is to smooth sharp edge, and even out any irregularities, by rubbing piece with circular motion against Carborundum powder and water smeared on glass. The more even the cutting, the less grinding will be needed; usually about three minutes' work with coarse (No. 30) powder should do the job. If smoother-finished edge is desired, finer-grained abrasive can then be applied.

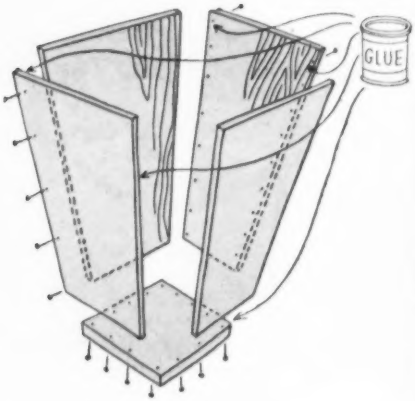


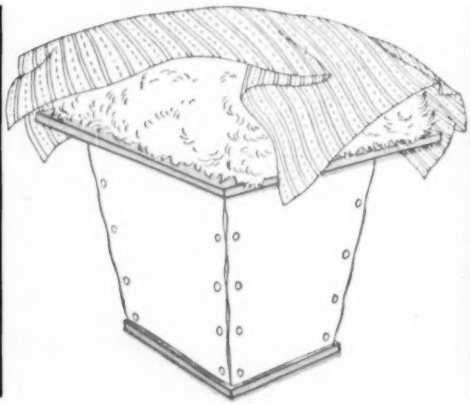
**SKETCH SHOWS DESIGN** and electric connections of bottle cutter. Connected in series are cone heater unit, on-off switch and looped piece of nichrome wire, which should glow red-hot when switch is on. (If necessary, to get wire hot enough, current could be beefed up a little by placing cone heater unit in double socket with 100- or 200-watt lamp bulb, or—for experts only!—by just bypassing one or two turns of cone's coil.)

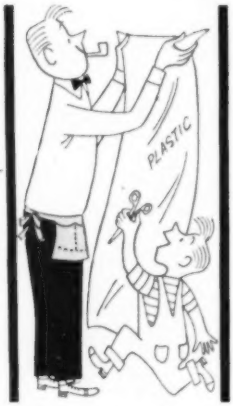
**SMOKER'S SET** was cut from bottles. Brass bands for decorative touch are optional. Articles from bottles of colored glass often need no adornment to enhance beauty. END

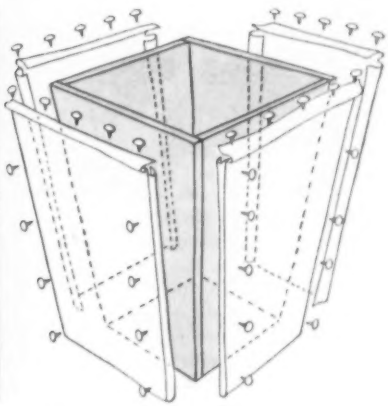
By Roy Doty and E. L. Britt

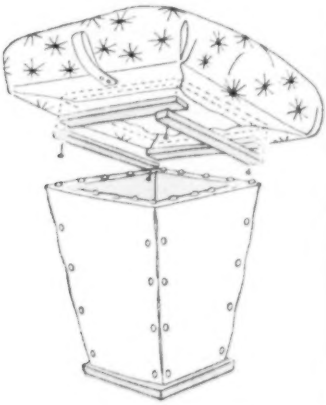
# Wordless Workshop









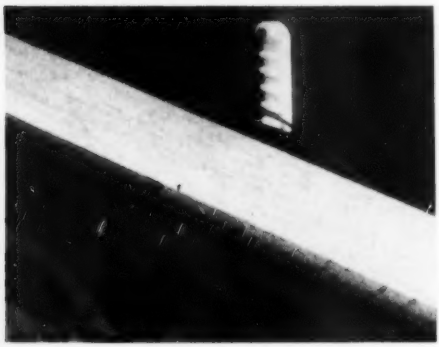


***Next Month: A table built from ready-made parts.***

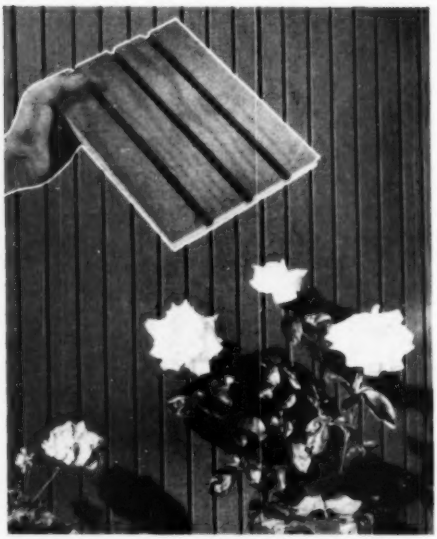
# New for the Handy Man

**1. Tiles Need No Cement.** You can put down these rubber floor tiles as fast as you can fit them together like pieces of a puzzle. The interlocking tiles need no cement, are not affected by moisture and can be laid over wood or concrete above or below grade. They come in ¼″ and ½″ thicknesses and in a variety of colors.

**2. Hanger Adjusts to Five Levels.** This plastic hanger makes it easy to line up your pictures like soldiers on parade. The ridges give you five positions, eliminating need for removing nail from wall.

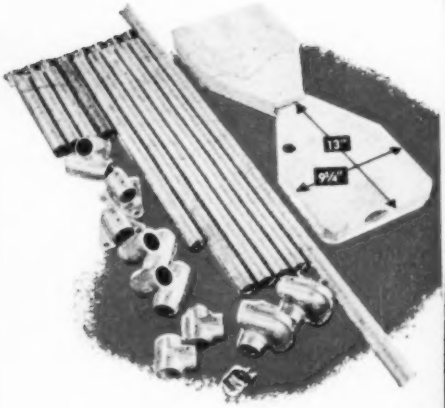


**3. New Cube Tap.** Extension cords of any length can be quickly made up with these receptacles. The wire is slipped in and the cover closed, forcing two metal prongs through the insulation to contact the wire.



**4. Grooves Style New Plywood Panel.** This new exterior paneling has deep parallel grooves ¼″ deep and ⅜″ wide running lengthwise on its face. The grooves are 2″ apart on 16″ panels and 4″ on those 32″ wide. Both sizes come in 8′ and 10′ standard lengths. The panels are made of ⅜″ fir plywood with the surface left unsanded and with small knots to give a natural, rustic appearance. Because of the grooves, the shiplapped panels need no special joint treatment.

*Further information on these products can be obtained from: 1. R. L. Mitchell Rubber Co., 2114 San Fernando Rd., Los Angeles 65; 2. Jiffy Enterprises, Inc., 1011 Chestnut St., Phila. 7; 3. Academy Electrical Products Corp., 3842 Ninth Ave., NYC 34; 4. Douglas Fir Plywood Assn., Tacoma 2, Wash.*



**SEESAW** is quickly made with 1" pipe and new slip connectors. Pipe lengths required: one 8' for teeter beam, four 28" for legs, one 24" for crossbar, four 10" for handles.

# Now Anyone Can Build with Pipe

***New threadless couplings let you make toys, tables, railings—anything of pipe—as fast as you can slip the parts together.***

**By Sheldon M. Gallager**

YOU can set up the child's seesaw shown above in just five minutes, once the pipe has been cut to the right lengths. A frame for a swing would take longer—maybe an extra 10 minutes. Or perhaps you'd like adjustable storage shelves or a knockdown scaffold that can be put together in a few minutes, then quickly taken apart for easy storing or carrying in a car.

All these, and many more, are made with new lightweight, aluminum connectors that join pipe without threads. You simply slip in the pipe, tighten a setscrew and it's locked in to stay. Because there's no threading, welding or bending required, you can cut the pipe yourself, put it together and take it apart whenever you want, and keep using the same fittings over and over.

Six basic types of connectors, including tees, corners and adjustable swivels, can be combined to form anything you can build with pipe. They come in five different sizes to fit standard pipe from ¾" to 2" in diameter, and are also available in various combinations so two different sizes of pipe can be used together.

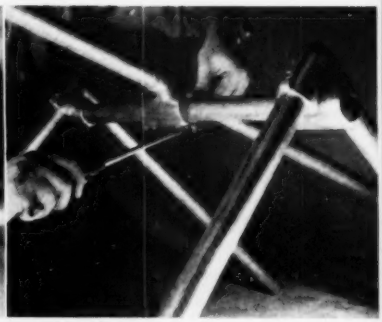
***Fittings save work.*** Because the connectors have a special offset design, permitting pipes to cross each other, you don't have to make as many cuts. One long length can pass right through half a dozen connectors, saving the work of cutting and fitting at each joint. This also provides greater strength, making possible projects like the seesaw, where the teeter beam must remain unbroken at the middle for sufficient support.

Because one pipe can slide past another

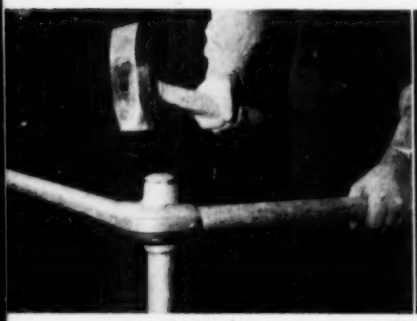
# How Seesaw Is Assembled in Six Simple Steps

**PIPE CAN BE CUT** with hacksaw using coarse-tooth blade. Tape wrapped around pipe guides saw to insure straight cut. Local plumbers will also cut pipe to order for small charge.

**PIPE IS SLIPPED** into fitting and locked tight with Allen wrench that turns setscrew. Fitting shown is 90° corner connector used to join legs to crossbar at each side of seesaw frame.

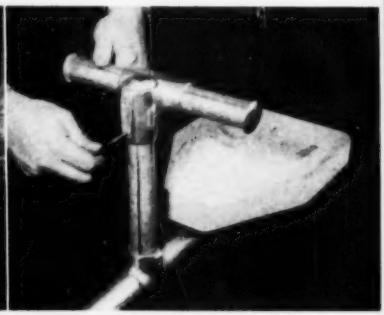


**TEETER BEAM** pivots on cross fitting slipped loosely over horizontal bar. Hose clamps tightened on either side of beam make inexpensive bearings to keep beam centered.



**END CAPS** dress up exposed pipe ends, conceal rough edges. Caps have soft metal flange that cuts its way in, making tight fit. Use heavy hammer, block pipe on wood.

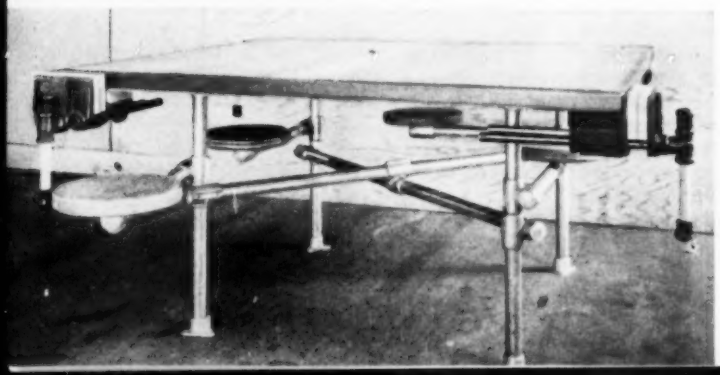
**SEATS ARE MOUNTED** on teeter beam with wall flanges screwed to underside. Use 2" pine stock, shaped as shown, and locate flange so pipe, not seat, will strike ground.



**HANDLE BAR** is made with straight tee that fits on teeter beam and offset tee that holds crossarm at top. Be sure to cap rough pipe ends that might hurt hands or clothes.

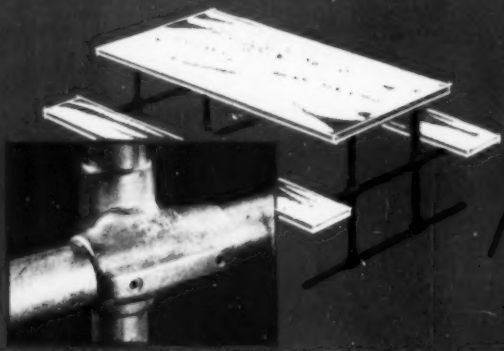
one, you can also make structures not possible with ordinary fixed-pipe fittings. Shelves, scaffolds and loading hoists, supported on the slip connectors, can be quickly slid up or down on vertical pipe for easy adjustment to any height. Swivel joints can be made by simply slipping a fitting loosely over a pipe instead of locking it tight. And if baby sister wants to balance big brother on the seesaw, just slide the teeter beam off-center and retighten it.

The fittings, called Nu-Rail, have a structural strength equal to that of the pipe itself. They are made by the Hollaender Mfg. Co., 3841 Spring Grove Ave., Cincinnati 23, Ohio.

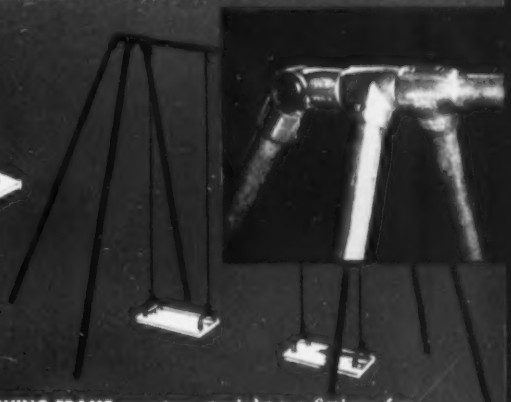


**WORKBENCH,** made here for use by several shop students at a time, can easily be adapted for home bench. Sturdy frame for table top is made with only four legs and two diagonal cross braces. Swing-out seats are circles of plywood mounted on short pipe arms that pivot on legs.

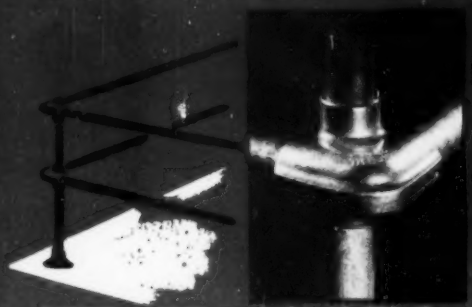
# Six Basic Fittings Will Build Any of These



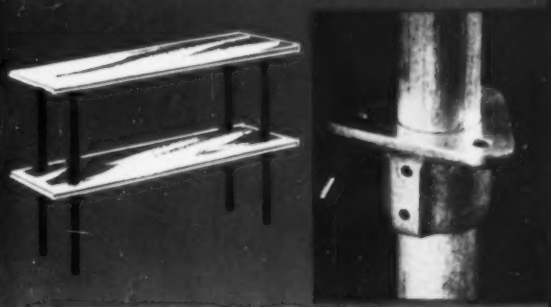
**PICNIC TABLE** has built-in seats, requires only four pipes at each end, held by cross fittings where they intersect. Table top rests on floor flanges, seats on wall flanges.



**SWING FRAME** uses two straight-tee fittings for legs combined with adjustable swivel that holds diagonal end brace. Two halves of swivel are locked together on short pipe.



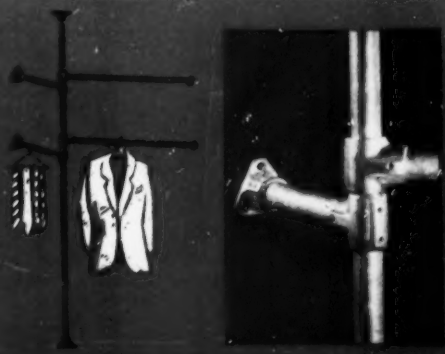
**RAILING CORNERS** are made with 90° elbows slipped over posts. Same fittings are used at top, capped off with end plugs. Slanting railings are made with adjustable cross fittings.

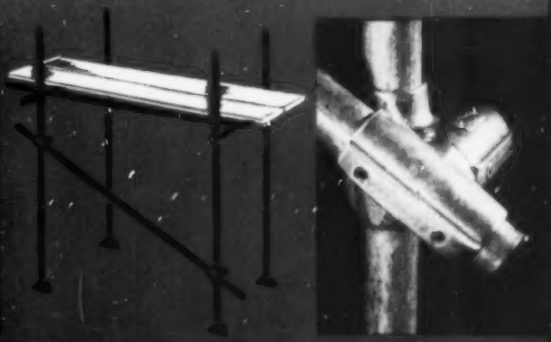


**ADJUSTABLE SHELVES** are easily made with floor flanges turned upside down and screwed to underside of planks. Shelves are drilled to slip over pipe, can be quickly set to any height.

**SWING-OUT CLOSET POLES** make clothes easy to get at, are simply short arms mounted loosely on vertical pipe. Arms pivot on braces screwed to back of closet to serve as supports.

**PORTABLE SCAFFOLDS** can be made any size, are quickly put up or taken down. Adjustable cross fitting can be set to any angle, permits use of strong diagonal brace. END





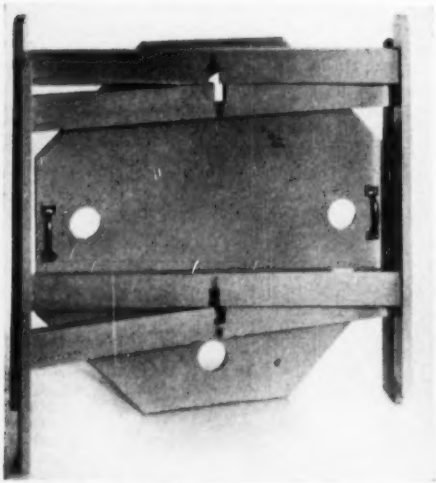
# Tray Table Totes Meals for Four

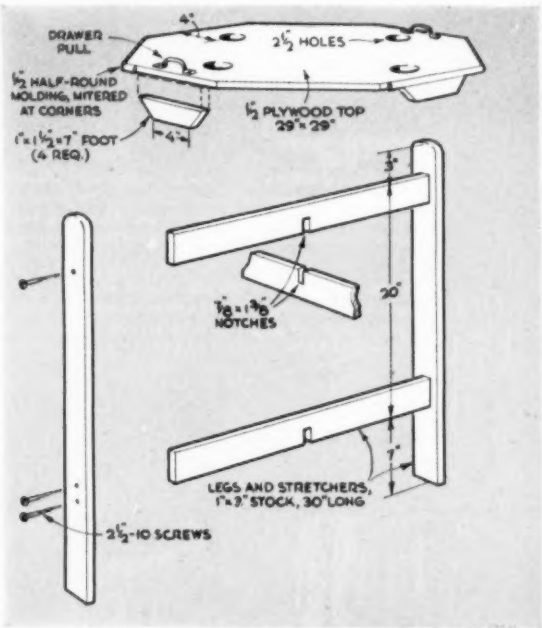
***It gives lots of leg room for dining and folds flat for storage.***

EVEN filled glasses can be put on this tray table right in the kitchen, so a whole luncheon can be carried in to your guests at once. Besides seating four for dining or games, it's ideal for buffet serving.

Lay out the top on ½" plywood by marking off 45° corners along the sides of a square. Check by measuring the eight sides, which should be of equal length. Cut holes to fit your glasses with an expansive bit or circle cutter. Miter half-round molding around the edge. Glue and screw or brad on four feet. Cut frame members from one-by-three stock. Enamel or lacquer makes a good finish.—*Jim Anderson, Berkeley, Calif.*

**TRAY TOP** measures 30" across, has handles on top so that it can be carried through a 32" doorway. Base consists of two assemblies that pull apart as below for flat storage.





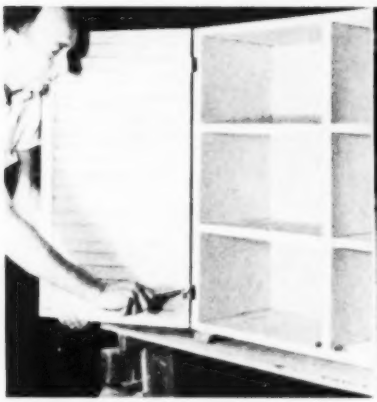
**CUT NOTCHES** in top edge of one pair of the stretchers, in lower edge of other to form half-lap slip joints. Make notches a close slip fit so table will stand firmly. Corners may be chamfered for easy assembly.

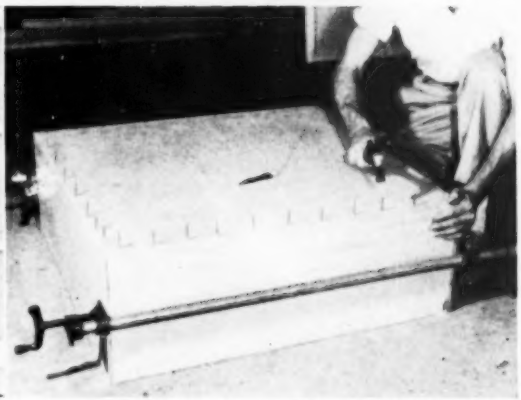
## The Shelves Slide Out in This Shutter-Door Linen Cabinet

CHARM plus utility were what my wife was after in a bathroom linen cabinet. I gave them to her in a neat job featuring doors made from old shutters, shelves that slide out for easy reaching, and an interior covered with decorative wallpaper.

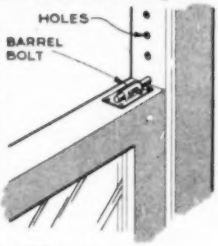
The cabinet is 30½″ high and 33″ wide. The top, sides, bottom, center partition and shelves are 1″-by-12″ white pine used full width. A sheet of ¼″ plywood is rabbeted into the back and fastened with glue and finishing nails. Rabbets were cut in the ends of the shelves, leaving projections to slide in ¼″-by-¼″ dadoes in the uprights.

The doors, made from the upper half of a pair of window shutters, are mounted with butt hinges. The interior was painted with sealer and papered.—*John Rogers, Dallas.*

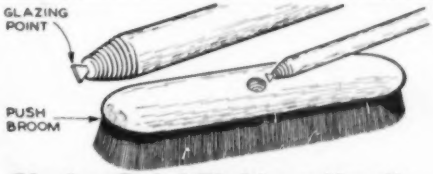




## Barrel Bolt Locks Window Open



You can leave a window open an inch or two and still lock it securely if you mount a barrel bolt on top of the lower sash. Then drill a vertical line of holes in the casing of the window to accept the bolt at several different levels. The top sash can be locked in the same way by placing a bolt on the side of its frame.—*Lewis Booker, Louisville, Ky.*



## Glazing Point Tightens Handle

DRIVE a glazing point part way into the end of a loose-fitting push-broom handle to keep it from twisting out as you use it. As the handle is threaded into the broom, the point will strike the bottom of the hole. Continued pressure will cause it to bend out and dig into the wood, preventing any future loosening.

***Anton Bohaboy turns out powerful little steam engines and boilers on a one-man assembly line. That's why he's the***

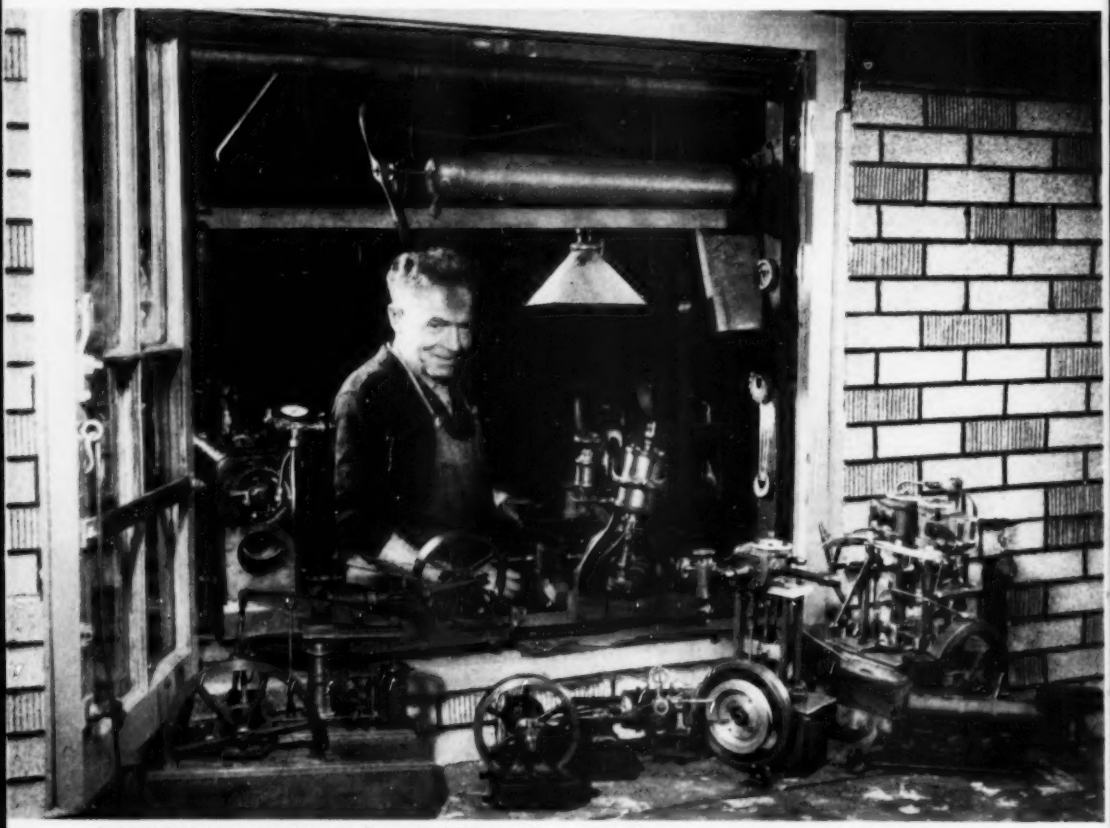
# Tea-Kettle Henry Ford

**By Harry Walton**

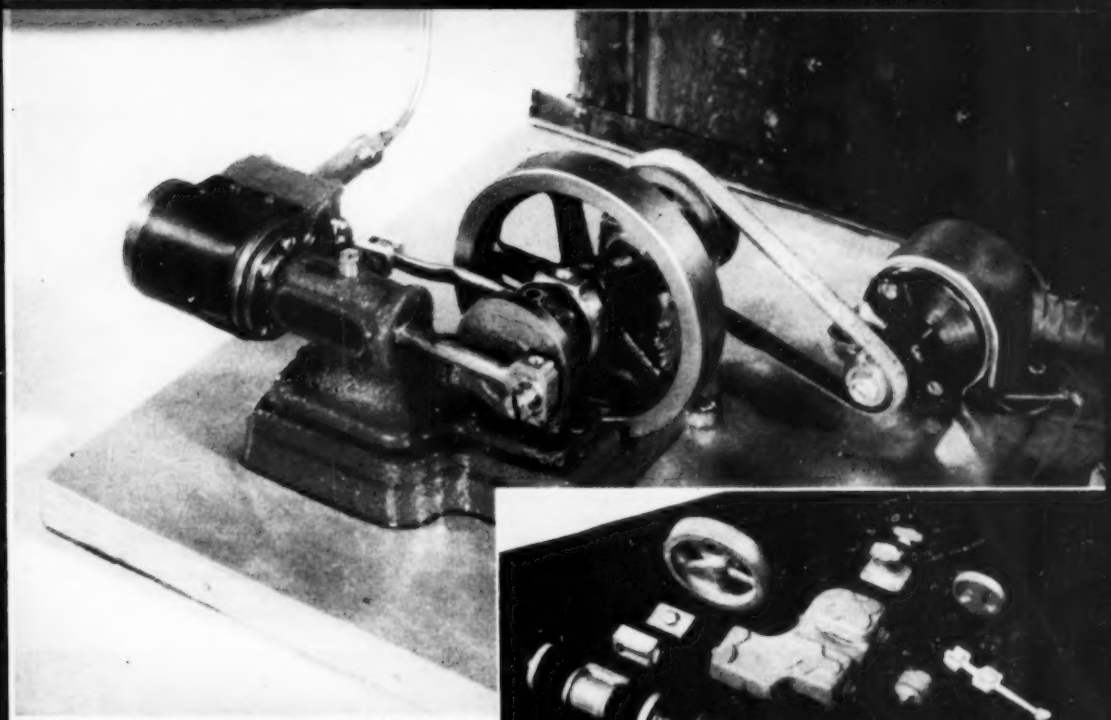
"STEAMBOAT burns in Central Park," screamed a newspaper headline some years ago. The skipper of that craft was a shockheaded young Czech named Anton Bohaboy, the ship a steam-powered model in which the fire had gone out of control.

But a reporter's gag didn't end Bohaboy's enthusiasm for steam power, which has stayed at high pressure for more than 30 years. Today, in a tiny garage workshop as cluttered as Fibber McGee's closet, this wiry, bushy-haired master machinist still keeps the Age of Steam alive.

From that shop at 2297 Price St., in



**GLIMPSE INTO WORKSHOP** shows Bohaboy with some of the engines he has made. At left inside window is big boiler, at right a large oscillating-cylinder engine, overhead a compressed-air tank with rotary aircraft motor (cylinders turn with prop). In foreground (left to right) are a beam engine, horizontal engine with working governor, vertical single-cylinder engine, vertical twin with reverse gear, and a No. 1 gauge steam locomotive.



**POWERHOUSE ENGINE, 3/4" bore and 1" stroke, easily drives a bicycle generator. At right are iron and bronze castings and blueprint for engine sold by Bohaboy. Kit includes all steel and screws needed. Price is $9.**

Rahway, N. J., Bohaboy has shipped engines and boilers to Burma, Sweden, Peru and Australia. They have driven boats, bicycles, model planes and machinery. Among his customers have been doctors and taxi drivers, GIs and millionaires.

But Bohaboy is best understood by his workshop, which occupies a one-car garage much too small for a modern sedan. Machinery crams it to the rafters. Two lathes, two drill presses and a milling machine are run from overhead line shafts. In one corner hulks a gigantic old-fashioned shaper.

Everywhere are stacked boxes of parts, bits of dismantled engines, and models under construction. His workbench boasts an inch-thick steel plate about a foot square as its chief working area.

Shafting ends, blocks of steel and chunks of scrap iron lie piled on the floor around every machine. "As ballast to keep them from floating away," his wife wryly observes.

As bustling and energetic as one of his engines under full steam, Bohaboy turns out work at a phenomenal rate. Homemade jigs speed machining of his stock engines. He keeps a steel rule at every machine, a micrometer at each lathe. Every tap is permanently mounted in its own tap wrench, each die in its own holder.

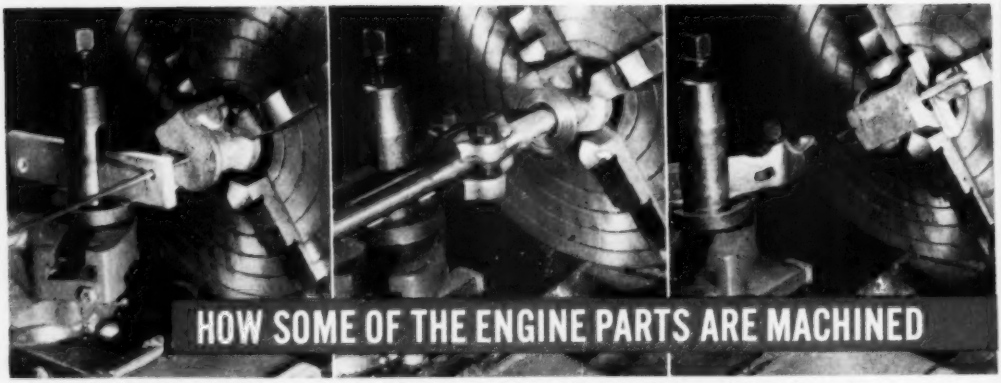
### *Bohaboy Does a Job in Jig Time*

Under his quick hands a chunk of cast iron becomes a cylinder, a bit of bronze a valve, a rough disk an eccentric. He consults no blueprints, rarely makes drawings, even of a new engine, in advance.

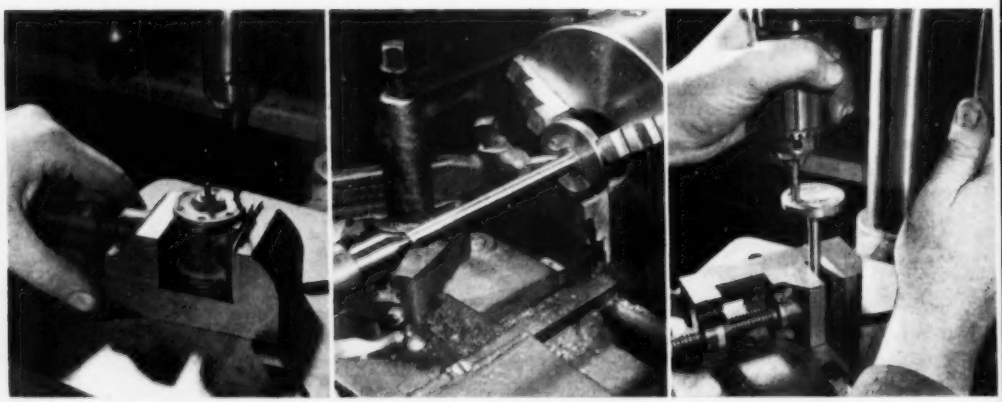
When the engine above was being hooked up, an extra-long steam-chest fitting was needed. I timed Bohaboy as he made it.

Chucking a piece of hex brass, he turned one end, by eye, close to size, miked it, finished to dimension with the graduated feed collar, and threaded this end. Then he reversed the piece, turned down and threaded the other end a different size, drilled clean through and countersunk for a union cone. The job would take many a good lathe hand 10 to 15 minutes. Bohaboy's time was 3½.

Starting as an apprentice at a locomotive



**CYLINDER CASTING** for the horizontal engine on the preceding page is first center-marked with aid of dividers, then gripped in four-jaw chuck with exhaust boss up as at left above and adjusted so that wobbler indicates center mark running true. End that will bolt against crosshead guide is then faced, the casting drilled through and hole brought to size with a reamer or boring bar (center photo). Grooves on faced end are a Bohaboy dodge to insure firm seating of gasket. To machine port face, casting is gripped as at right above. A rod through the bore rests on two chuck jaws to insure parallelism.

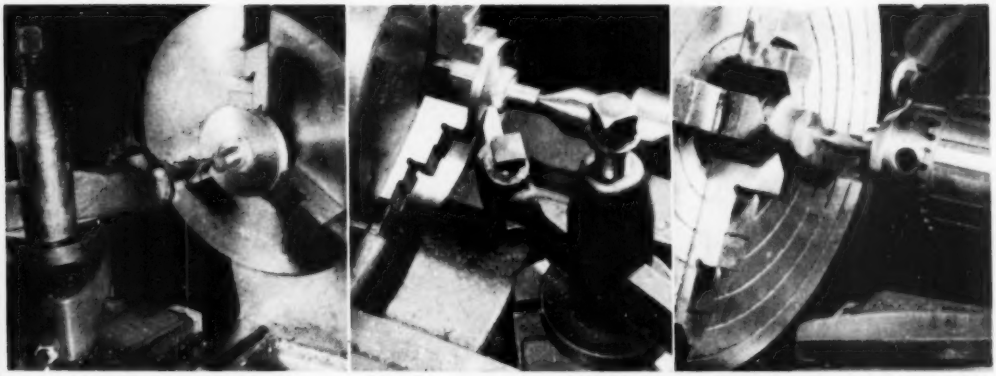


**DRILLED FRONT HEAD** is clamped to cylinder with a long bolt, holes being aligned to miss steam ports, and used as a jig to drill matching holes in cylinder flange (left above). Dot on rim of each member indexes it for final assembly in same position. Cover is next used as jig to spot similar holes in flange of crosshead guide. Crank disk is turned, tapped and jammed onto threaded shaft, which is chucked for truing outer disk face. Inside face is trued as in center photo, the tailstock center supporting end of the shaft. To drill and tap crankpin hole true, shaft is held in V pad in drill-press vise turned on side (right).

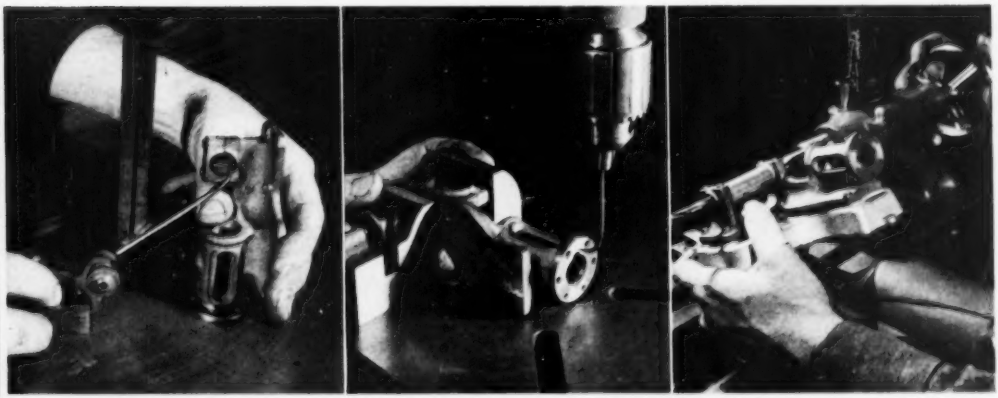
works in Prague, Czechoslovakia, Bohaboy came here in 1912. He went first to the Midwest, where he repaired farm traction engines, tended boilers and served as engineer on a Lake Michigan ferry. During World War I, he was a machinist at the Bliss torpedo plant in Brooklyn, and after that in a shop that built button machinery.

But this lacked the fascination of model engines, for one day the boss caught him building something that had nothing to do with buttons. It was a steam plant for a model boat, and the shop owner, another Czech named Dusha, was so intrigued he asked Bohaboy to build one for his son.

This was Bohaboy's start, for he soon opened his own model-making shop. He designed and built regular and flash-steam plants, as well as such special jobs as an eight-cylinder poppet-valve engine for a 6′ boat and a model of the New York Central's engine 999. He also built a flash-steam plant



**FRONT HEAD** is critical as it aligns bore with crosshead guide. Casting is held in three-jaw chuck (left), faced off, and stem turned true. A 5/32" drill is run through, casting reversed and chucked by the stem, other side faced and a shoulder turned to fit cylinder bore closely. Head is then chucked on this shoulder and tail center run into the 5/32" hole (center photo) for turning crosshead-guide shoulder and scribing bolt circle. Eccentric casting is chucked by its stem to turn and groove body, face end, and spot center. Then it is gripped 1/8" off-center in the four-jaw chuck (right above) to drill shaft hole.



**CROSSHEAD GUIDE** comes with its bore and flange machined to save kit buyer a tough job. Bearing is scribed with surface gauge (left above), punch mark made on cap parting line, and casting clamped in drill-press vise. To drill bearing parallel to flange face, bent scriber can be used as shown (center). Casting is set so that point touches both sides of flange evenly. Bearing is drilled 1/4", bottom of this and outer bearing filed to align cap parting lines and both parts mounted on base with a 1/4" rod aligning holes. Rod is removed, packing piece jammed in, and setup held against tail center to line-drill 5/16".

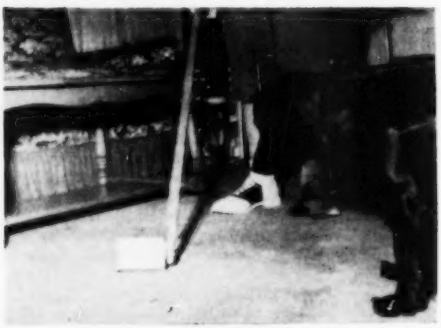
that flew a model plane, and for several years sold compressed-air motors for the same purpose.

The tanks for these were of .006" shim brass, reinforced with piano wire. He narrowly escaped killing himself on occasions when a tank blew up under test. (His boilers are all pretested with hydraulic pressure, and none has ever given way under steam.) In 1932 he put on the market one of the first model gas engines, a two-cycle job of 1¼" bore and stroke. Today Bohaboy specializes in steam boilers, engines and castings kits. The photos above show some of the steps a hobbyist might take in machining parts to make a ¾"-bore, 1"-stroke horizontal engine.

To Mrs. Bohaboy's pleas for cleaning up and reorganizing his chaotic workshop, Bohaboy replies it's an organized confusion, in which he can find anything he wants. And sure enough he does. END

## Gauge Measures Inside

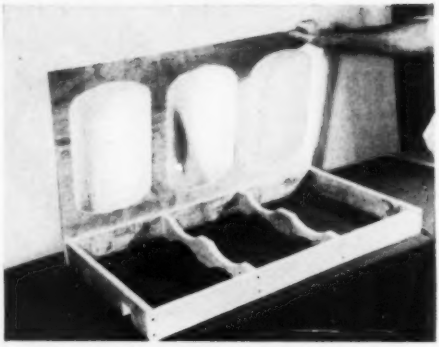
SHELVES, stair treads and other pieces that must fit into a blind space can be accurately cut with the help of this telescoping gauge. It also sets the angle of cut to fit the ends of shelves in off-square corners. Cut two ¾" plywood strips and slot their centers so they can slide back and forth to give the required length. A strip on each end pivots on a stove bolt to record inside angles. Wing nuts lock settings while they are transferred to the board.—*John D. Bell, Provincetown, Mass.*



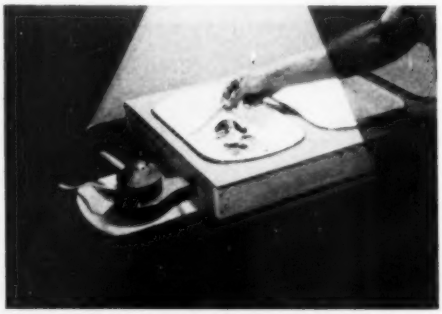
## Roller Picks Up Dog Hairs

WRAP masking tape, sticky side out, around an empty orange-juice can and bolt the unopened end of the can to a broom handle. When you roll the can along the floor, hairs and lint are picked up by the sticky surface. When the job is done, unwrap the tape and dispose of it, hair and all. —*Glen F. Stillwell, Manhattan Beach, Calif.*

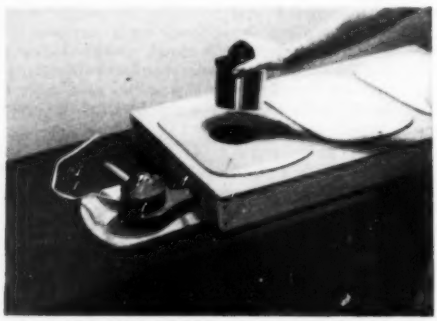
## A Hair Drier Warms My Photo Chemicals



**1. THIS WOODEN FRAME** puts a hair drier to work keeping my developing chemicals at good working temperature. Trays rest in openings in the top panel. Cut box ribs as shown so heated air circulates freely.



**2. HAIR DRIER FITS INTO END** of box frame next to the tray for developer, which has the most critical temperature requirements. The drier is not altered and can be removed any time your wife wants it back.



**3. DEVELOPING TANKS** can be used in the warmer by covering the tray opening with a top cut out to fit. Control temperature of chemicals by switching drier on and off.—*Donald Murphy, Springfield, Mass.*

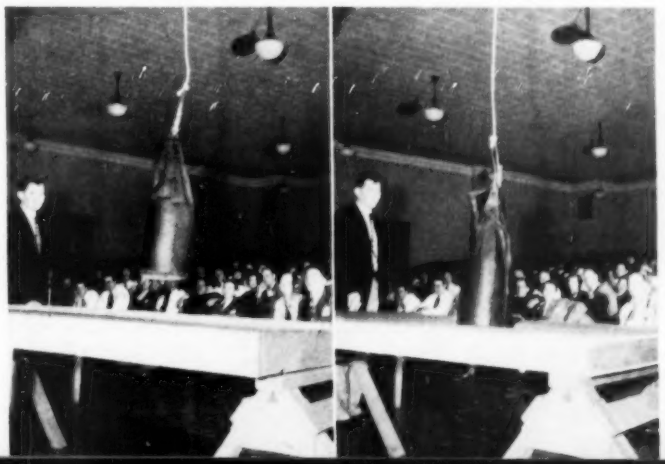
***Illinois experts are now omitting studs from storage partitions. Here's how you can use their***

# New Tricks for Building Walls

**By Sheldon M. Gallager**

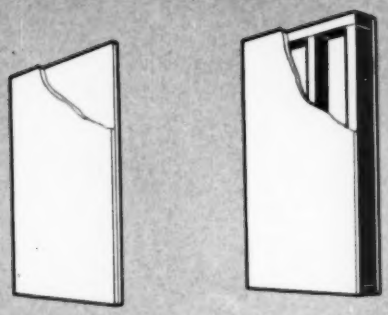
WALLS without studs are the latest gimmick for building simple, inexpensive storage partitions. Because you leave out the wood framework, you save labor and lumber. Because the walls are thin and light, you can put up a unit that will store a host of articles in little more floor space than a conventional wall occupies.

The new walls are simply a thin sandwich of ⅜" gypsum board bonded to ⅛"

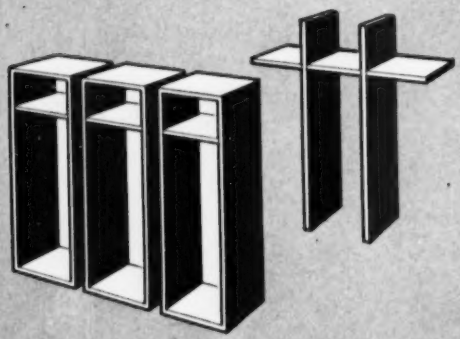


**NEW WALL BEATS OLD in tests recently conducted by experts at University of Illinois. At near right, thin, studless panel, developed for use in building closet walls, is undamaged by 60-lb. sandbag that bounces harmlessly off after 4½' drop. At far right, after only 1' drop, sandbag smashes right through conventional stud wall.**

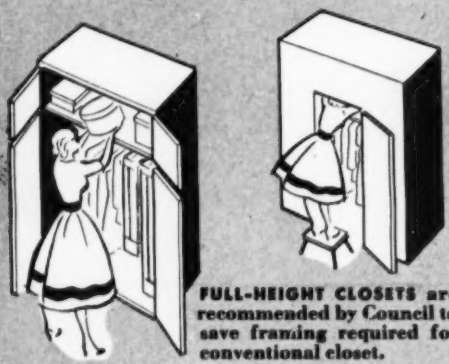
## How Studless Walls Save Space and Money



**THIN, STUDLESS PANELS, only ½" thick, cost less, save 4½" over conventional wall.**

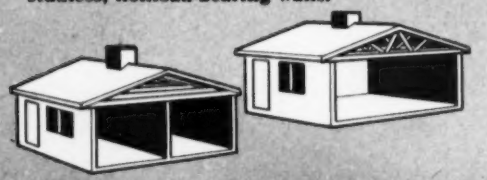


**BY USING EXISTING WALLS, where possible, to help frame closets, you need fewer partitions (right) to give same storage space as individual cabinets put side by side.**

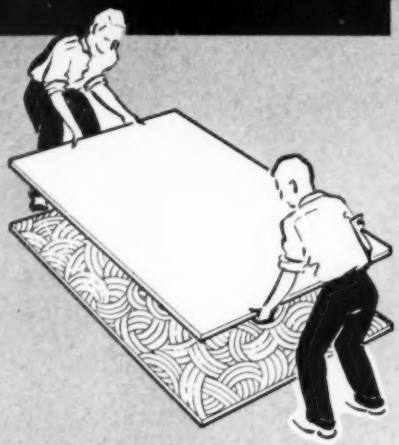


**FULL-HEIGHT CLOSETS are recommended by Council to save framing required for conventional closet.**

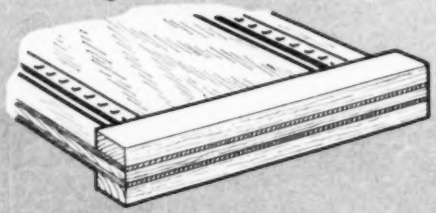
**TRUSS ROOF (right), found in many new homes, is self-supporting, permitting use of studless, nonload-bearing walls.**



## How Studless Panels Are Made



**BACK PANELS, used to face rear of closet, are made of ⅜" gypsum board cemented to ⅛" hardboard with linoleum paste. Half gallon of paste is applied to 4'-by-8' sheet of hardboard with notched spreader, then 4'-by-8' gypsum sheet is laid on top. Panels are weighted and allowed to dry 24 hours. For damp areas a waterproof cement is used.**



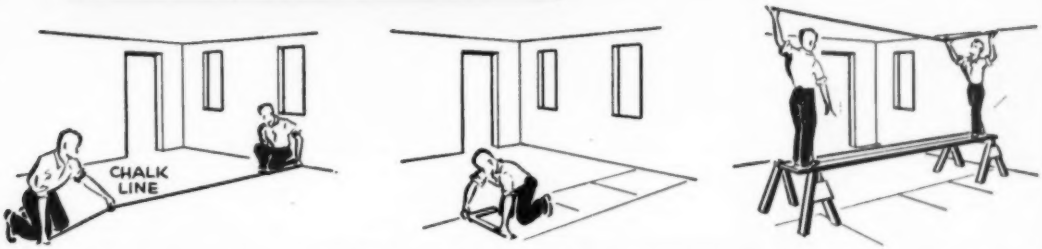
**DIVIDER PANELS, used to partition closets, can be made of ¾" plywood or a frame of 1"-by-4" stock covered on both sides with ⅛" hardboard. Panels are cut ¼" short at top so they'll fit easily in place, and 1"-by-2" cleats are nailed to bottom to form base. Adjustable shelf supports, called pilasters, are fastened to dividers before panels are put up.**

hardboard. The tough, resilient hardboard gives the slim panels tremendous strength. Narrow uprights placed at right angles to these panels provide support.

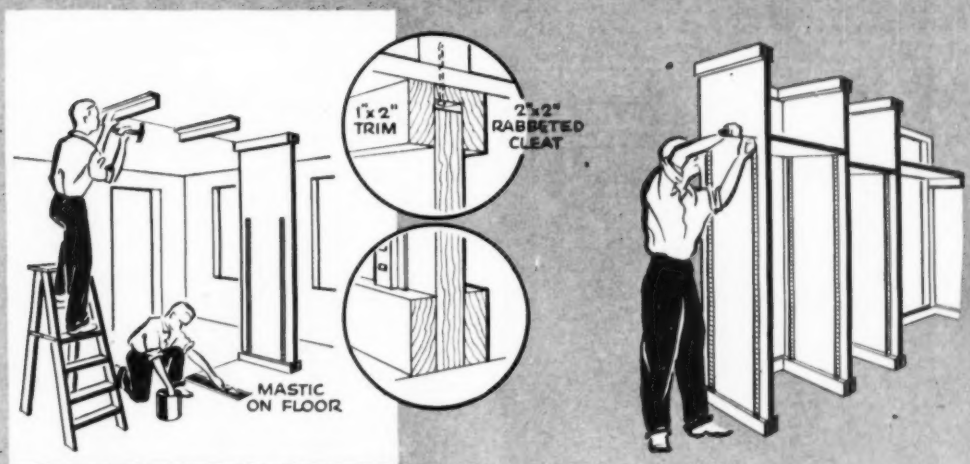
The walls, developed by the University of Illinois Small Homes Council under a Lumber Dealers Research Council grant, are described in two recent circulars.*

*"*Storage Partitions*" (*a descriptive pamphlet*) and "*Construction of Storage Partitions*" (*a detailed instruction sheet*) *available from Illinois Small Homes Council, Urbana, Ill., at 10 cents and 25 cents respectively.*

# How Panels Are Used to Make Closet Walls



**LAYOUT OF CLOSET is first outlined in room to show positions of panels. Starting at floor, line is marked in where back panels fall (left). Then divider panels are marked in at right angles to back-panel line with carpenter's square (center). Floor plan is then transferred to ceiling (right). Ceiling lines are located by dropping plumb line to floor.**



**NOTCHED CLEATS hold divider panels at ceiling (left). If saw is unavailable for rabbeting, cleats can be made from two wood strips. Panels are then set in mastic at floor, nailed to cleats at top, and fixed shelf is screwed between to form rigid box (right). Cleats are also nailed between dividers as nailing surface for back. (Please turn page.)**

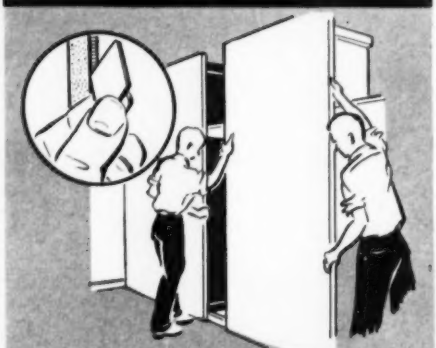
***How panels are used.*** The bonded sheets, which act as back panels, are used to face the rear of a closet where the unit is not placed against an existing wall. This provides a gypsum surface on the outside to match the regular plaster or plasterboard walls found in most homes.

To brace these back panels, narrow divider panels are erected at right angles to them. The dividers, spaced up to 4′ apart, are put to work as side walls for closets and vertical partitions within the storage walls. Where a closet is built against an existing wall, no back panels are needed.

***Walls save space.*** Because the closets are built without studs, they utilize floor space that a stud wall would waste. A 12″ studless storage wall, for instance, is only 7″ thicker than a conventional 5″ stud wall. Divide this between the two rooms that the closet separates and you are actually taking only an extra 3½″ off each room.

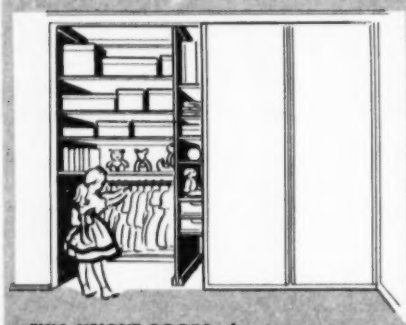
***They're flexible.*** Before each divider panel is put up, it is fitted with adjustable

## How Closets Are Built



**BACK PANELS ARE NAILED,** gypsum side out, to edges of dividers and cleats at floor and ceiling. Where panels meet, sheet-metal splines hold joints in line.

**ADJUSTABLE SHELVES** are placed on brackets set to any desired level. Clothes pole hung from shelf moves quickly up or down. Drawers can also be fitted in.



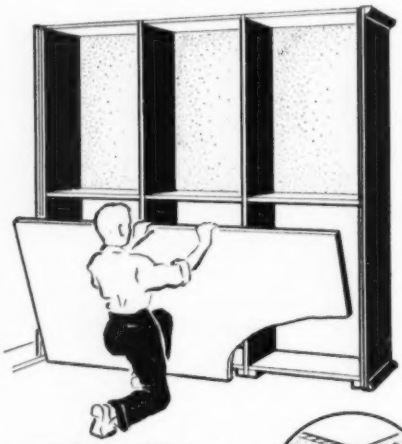
**FULL-HEIGHT DOORS** give greatest access to closets, can now be bought in stock 8' lengths and several widths. Sliding and folding types take least space.

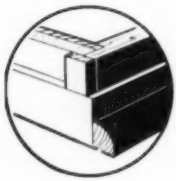
supports, pilaster shelf standards. Once in place, all you do is hook in metal tabs and slip in boards for shelves. One fixed shelf is screwed to the divider panels near the top to provide a rigid box-type construction, but the rest of the shelves can be quickly shifted around as desired.

In new homes where the roof is a self-supporting truss that does not require load-bearing partitions, the thin-wall closets can be used in place of partitioning walls. In older homes, the closets can be placed against any wall or used free-standing.

***How deep to make them.*** You can make your closets as deep (front to back) as you like, but the recommended depths are 12", 16" and 24". Sticking to these lets you slice an exact number of divider panels out of stardard 4'-by-8' sheets of hardboard or plywood with a ¾" glued up lumber core. With the 12" depth, you can use 1"-by-12" boards.

***Finishing.*** The back panels are patched at the seams with tape and cement just as on regular walls of gypsum board (see "How Anyone Can Plaster," PSM, Jan. '54, p. 203). The panels can then be painted or wall-papered to match the room. Dividers should be primed before painting, or shellacked for papering. Add molding and baseboard and you have a finished closet wall. END





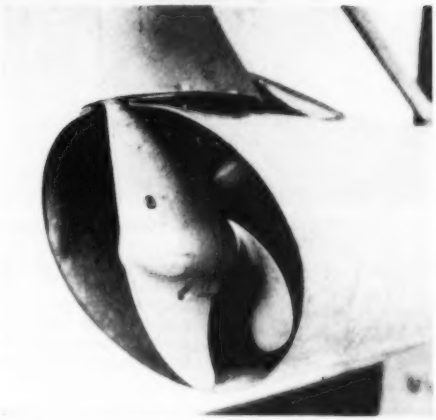
**ALTERNATE METHOD** of constructing closet shows how flat spacer boards are used to hold divider panels at top and bottom in place of cleats. Back panels can be put up horizontally for closet that faces two ways.

## Outboard Works as Pump to Extend Skating Season

When heavy snows fall, skating usually comes to an end. But not so on one Wisconsin lake this winter. There, outboard motors are being used to pump water from under the ice, flood away the snow and form a new, smooth coating of ice.

"We skate all winter and never use a shovel except to bank a little snow around the hole we chop in the ice," says Elmer H. Smith of Minneapolis.

"We use a 7½-hp. outboard motor and fasten two lengths of 9" galvanized stovepipe to the cavitation plate. (The end of one pipe is slit and bolted to the plate.) The 8" propeller gives considerable thrust so we put on a brace. Then we fasten the motor to a two-by-four about 4' long and set the apparatus into a hole so the propeller is submerged about 4"."

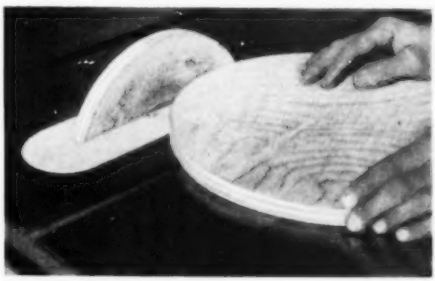


The conductor pipe throws water over snow banked around the hole to keep water from backing in. Smith and his friends use two holes and have a skating area about 100 yards wide and 150 yards long.

## Table Saw Gets Sanding Disk

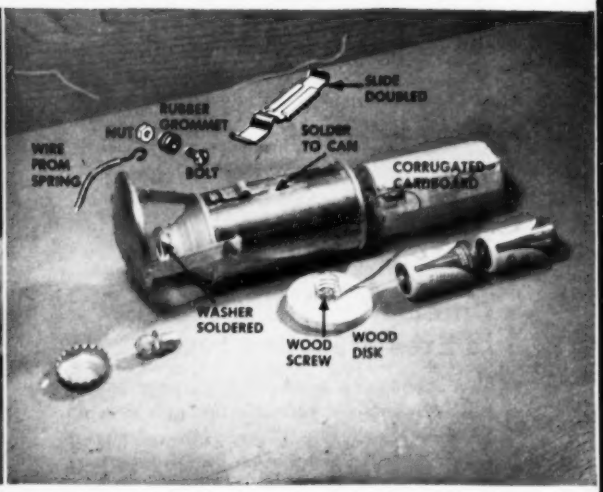
A disk cut from ¾" plywood and covered on both sides with sandpaper converts your table saw into a disk sander. The saw table also provides a larger area of support for the work than the regular disk-sander table.

Glue a 40- or 50-grit paper on one side of the disk for fast cutting and a finer grit on the other side for finishing. When dry, cut the center hole clear with a knife.—*Gordon D. Carlson, Minneapolis, Minn.*



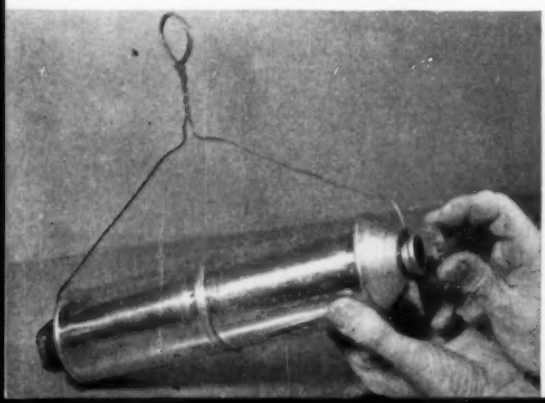
# 9 Uses for Beverage Cans

***These containers are easy to solder if scraped to bare metal, they take enamel nicely and their wax lining retards rusting.***

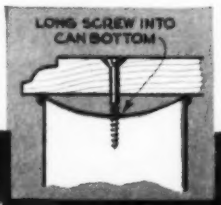


**1 STAND-UP FLASHLIGHT** made from 6-oz. can uses prefocused 3-volt bulb and two C cells in cardboard jacket. Cut out can bottom and screw in wood disk to which a coil-spring contact has been bolted. Make 3/8" hole in cap and fit over bulb flange. Flange rests on washer soldered atop can neck. Reflector is bottom of 12-oz. can, pivoting on strips soldered to can. Melt wax from reflector. Center post of top cell touches bottom of bulb. Wire from coil spring goes to insulated screw. Switch grounds it, lighting bulb.

**2 TOY ROLLER** is made by soldering two cans together and bending coat hanger around necks. Cap cans after putting in pebbles. Loop in wire makes a handle.



**3 FOOTSTOOL,** flowerpot shelf, play table or step a child can use to reach washbowl is made in a jiffy. Attach cans by running screws through wood into bottoms.



**4 TROUBLE LIGHT** or power-tool lamp calls for cutting can near the bottom. Tape sharp edges. Photo shows bayonet socket and wire loop held with two nuts. Wire has plug to fit auto cigarette-lighter socket. For home use, mount 115-volt socket with a washer and cord bushing as shown in the drawing.

**5 GAY CANDLESTICKS** for informal parties are an easy project. Paste or tape colorful wallpaper or gift wrapping around cans and pour in sand to keep them from tipping.

**6 STEAMBOAT WHISTLE** is a good party favor. Solder short brass tube to neck at angle found by trial. Add spool mouthpiece. Brace (dotted) makes toy more durable. To raise pitch, pour in water.

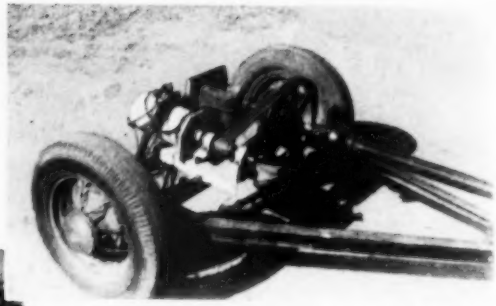
**7 BOY'S DUMBBELLS** are two 12-oz. cans on a 14" piece of ⅝" dowel. Partly fill cans with sand or wet plaster, push them on dowel and run screws through can bottom into dowel. Tape necks to avoid loss of sand, and wrap cord around the dowel for a better grip.

**8 SALT SHAKER** for picnics, (right below) is can with pierced foil held by cap with hole in it. Rubber reseal cap, with drilled hole, makes can a clothes sprinkler (left).

**9 MUSICAL GOURD** has pebbles in it to make the sound. Wrap dowel with tape to fit tight in neck and fasten with a wood screw through the can bottom into the dowel.

## Homemade 200-Amp. Welder Is Driven from Farm Tractor

**WELDING JUICE** follows the tractor with this mobile farm rig. Leonard F. Pompe, of Whittemore, Iowa, built a trailer of angle iron and an auto axle On it he put a 200-amp. war-surplus aircraft generator, with an auto drive shaft to the tractor's power take-off.



**DRIVE SHAFT TURNS** a 16" three-groove pulley running on ball bearings. Triple V belts drive 2½" pulleys on the generator, which is mounted to slide on the trailer cross members. Belt tension is adjusted by drawing up bolts that pull the generator back. The usual universal joints at the ends of the shaft take up any small misalignment between tractor and trailer. The reactor, rheostat and generator shunt are also mounted on the trailer.

### Drill Marks Wiring Passages

When wiring outlets in an old house it's a mean job to measure where to bore inside a wall to grab a wire from another floor. It's usually easier to pry up the base shoe and make a marker hole through the floor and ceiling to the next level. The small holes are easily plugged and concealed later.—*O. A. Nelson, Seattle, Wash.*

### Ladder Holds Sash for Painting

You'll save your back when you paint screens or storm windows if you turn a step-ladder into an easel. Attach a board across the back of the ladder and screw under it the ends of two boards placed on the ladder step. Screw blocks on the ends of the supports to keep the window from slipping.—*Robert Walsh, Wakefield, Mass.*

# KEEPING THE *Home* SHIPSHAPE

**A disposable apron** for jobs such as painting can be made from newspapers. Tie a string around your waist and drop a section over it. When splattered, tear off a page for a clean surface.

**For a pickled finish** on natural wood, apply lead or zinc white diluted with gum turpentine, rub with a soft rag until the effect is pleasing, then wax well, or finish with a coat of shellac.

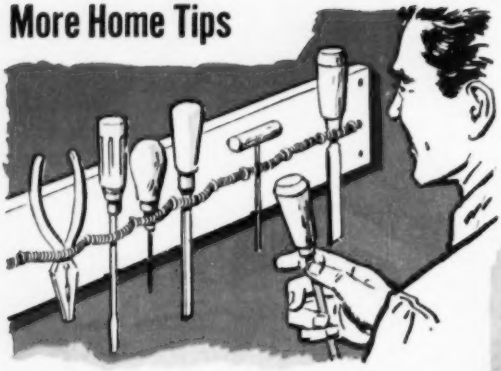
**A flip-up cover** made from canvas or plastic lets you stand on an upholstered stool without marring it. Put a hook opposite tacked end so flap tucks away when not in use.

**Save the wrappers** from bars of margarine. They make handy covers for small dishes of leftovers, being stiff enough to crimp over for an airtight seal.

**When driving screws** in hardwood, drop some soap powder into the holes. The screws will turn easily all the way in, which they may not do if soap is merely rubbed on the threads.

***Please turn the page for more home tips.***

# More Home Tips

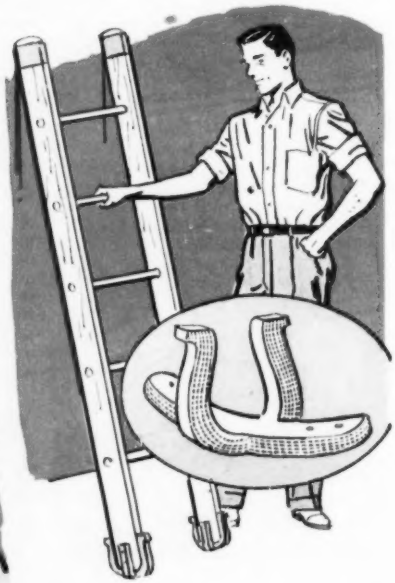


**Rack up small tools** in workshop or kitchen by stringing up a coil-spring curtain rod, then anchoring it at several spots with double-headed tacks.

**A gossip bench** for telephoning can be made from an old piano bench. It will hold the phone, store the directory and seat you comfortably while you chat. Cut the lid in half so you can lift it to get at the book without moving the telephone.

**Tilt cupboard shelves** to store cans on their sides—selection will be easier, weekend inventory a cinch and you may even find you can store more. As a can is removed, the whole row rolls forward to a stop strip, labeled for easy checking.

**Brighten up a dark room** by rigging it with mirrors. Besides hanging a wall reflector opposite the windows, fix mirror strips on window sills to bounce more light to the ceiling. Insert the strips in sill molding or cement them in place.



**Ladder boots,** cut from tire casing and nailed to the legs, will prevent skidding on a smooth surface. To keep the upper ends of the ladder from sliding, wrap them with bands cut from inner tubing.

# UHF Converter Updates Your TV Set

***For $20 or less you can make it pull in those new channels sprouting all over the map.***

**By Don Holm**

UHF television is coming your way, if it's not already there. Over 250 new stations were licensed in 1953 and more are coming. UHF reception, which covers channels 14 to 83, is superior in many ways to the familiar VHF of channels 2 to 13.

There's no need to miss the new stations just because your old set won't cover them, nor to shell out for a new all-channel receiver. A homemade converter and a UHF or a combination antenna will bring your present set up to date. With it you can get static- and interference-free UHF broadcasts without impairing your enjoyment of the channels you now use.

***It started in Oregon.*** When channel 27 went on the air in Portland, Ore., in 1952, it was not only that city's first TV station, but the first commercial UHF installation in the world. Ordinary VHF sets wouldn't get it, and with commercial converters worth their weight in back orders, Portland's radio hams and experimenters put many a homemade one to work.

One of the best of these was designed by Charles Glen Rose, W7OAY, a former Navy and Air Force radar specialist. You can build the same unit in a couple of evenings for $15 or $20 (depending on how many parts you can scrounge from the junk box).

***How the outfit works.*** The unit is stable and drift-free, broad-banded and critical only as noted. It can be tuned to any

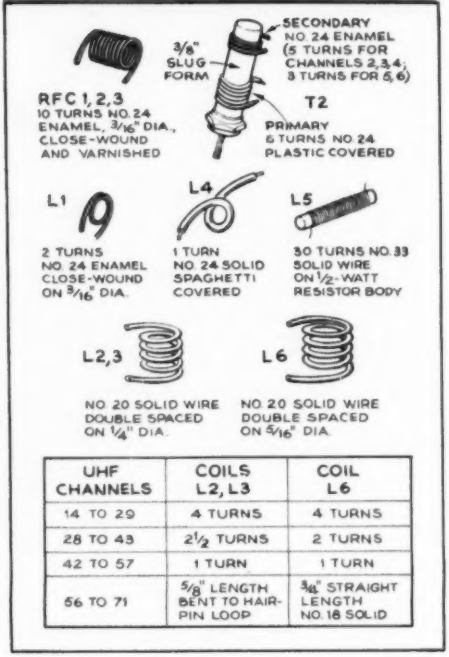
## The Parts You Buy

UHF channel from 14 to 71 without plug-in coils (you can forget about channels 72 to 83 for some time to come). No instruments are needed for alignment, no special TV knowledge required.

You tune the converter to the UHF range desired by winding the proper coils as an integral part of the circuit. These are nothing like the coils you wound for your first radio, for most UHF inductances have amazingly few turns—in fact, the L6 coil for channels 56-71 is a straight piece of wire ¾" long! You can wind all the coils needed in a short time. But don't improvise by using different wire or changing coil diameters; stick to the specifications.

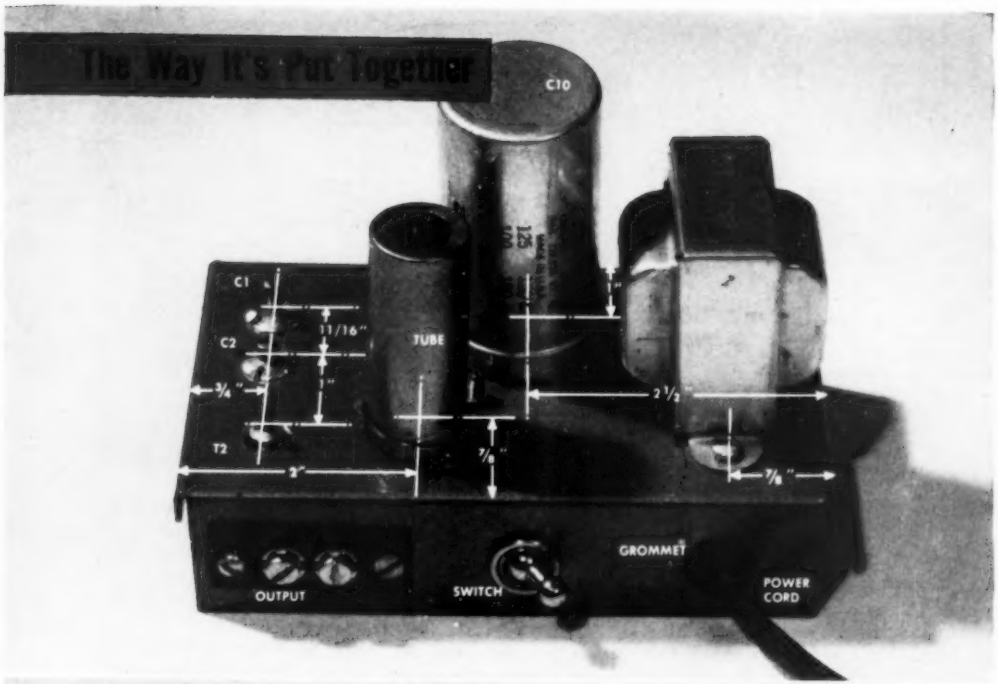
Technically speaking, this converter has two stages of tuned pre-selection, which are stagger-tuned for a six-megacycle band width to the UHF channel frequency. This is then converted to the carrier frequency of an unused channel on your VHF set by a one-tube oscillator and a diode mixer. The output signal is fed into your VHF set through the antenna terminals. There is no danger of harming or misaligning your set, and to go back to the ordinary VHF chan-

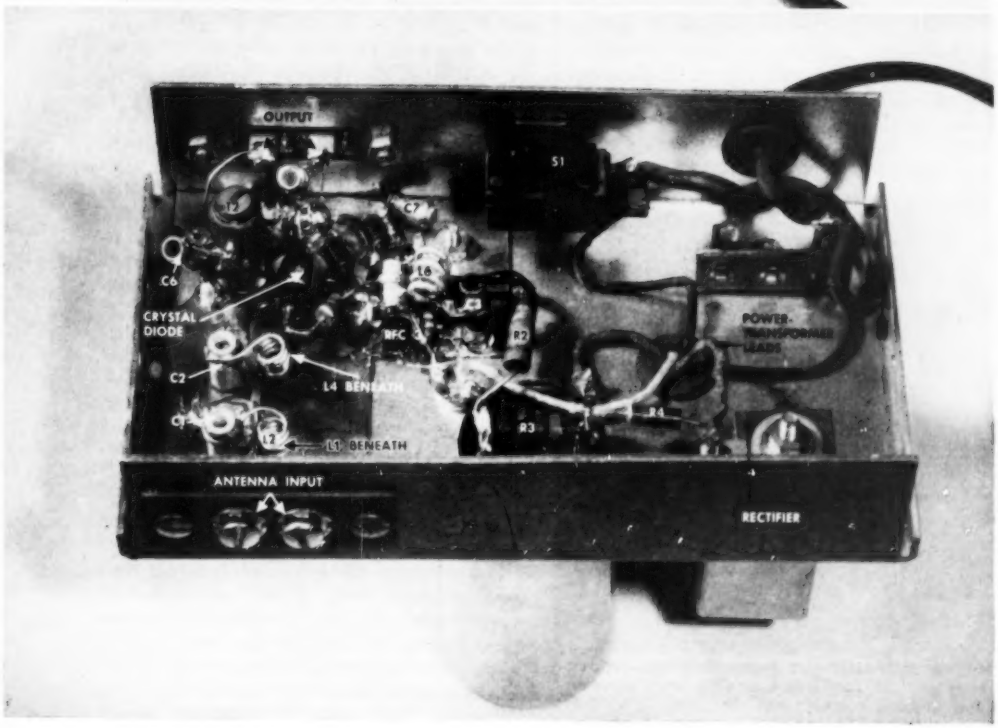
## The Coils You Make



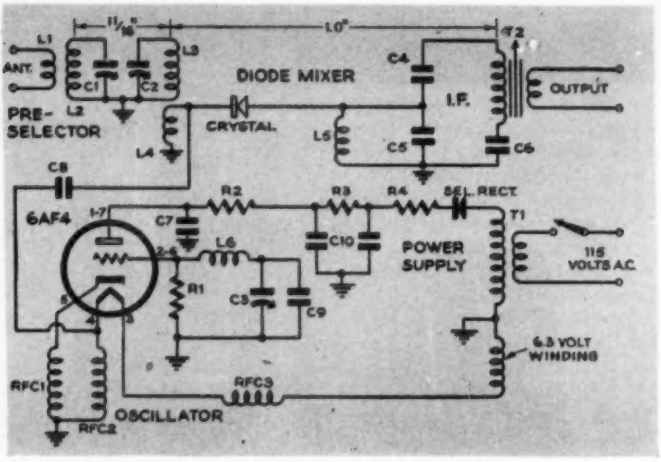
| UHF CHANNELS | COILS L2, L3 | COIL L6 |
|---|---|---|
| 14 TO 29 | 4 TURNS | 4 TURNS |
| 28 TO 43 | 2½ TURNS | 2 TURNS |
| 42 TO 57 | 1 TURN | 1 TURN |
| 56 TO 71 | ⅝" LENGTH BENT TO HAIR-PIN LOOP | ¾" STRAIGHT LENGTH NO. 18 SOLID |

## The Way It's Put Together





## How It's Wired



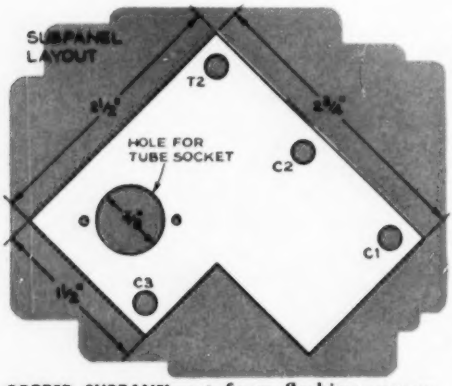
**WATCH POLARITY** when wiring crystal diode and selenium rectifier. If either is hooked up backward, unit will not work. Most diodes are marked with arrow and bar (bar stands for the cathode). Plus sign on rectifier marks terminal to go to R4.

nels you simply hook the antenna back directly instead of through the converter.

***Stick to the layout.*** At frequencies for which a straight piece of wire can serve as a coil, a slight rearrangement of parts can cause unpredictable effects. Better lay out the chassis and subpanel exactly as shown, for this arrangement works.

Mount the power transformer T1 on top of the chassis and run its leads through a rubber grommet. Attach a tie strip under one transformer-mounting nut and the selenium rectifier under the other.

Mount the switch, antenna terminal strips and electrolytic condenser C10. Solder resistor R3 across the two positive terminals of C10. Mount the tube socket with prongs 1 and 7 toward the switch.



**COPPER SUBPANEL** cut from flashing copper or even foil facilitates wiring and assures good ground connections. Be sure to solder copper to the set chassis at several places.

Cut the subpanel from common roofing or flashing copper or even copper foil, and punch (or drill and file) holes for the tube socket and tuning screws as in the drawing. Tin the copper where connections will be soldered.

Keeping all leads as short as possible, wire the power supply first. Run the AC power cord through another grommet and solder one wire to the tie strip, the other to the switch. Then connect the transformer primary (black leads) to the tie strip and the other side of the switch.

***Wind coils on a nail.*** The chart gives all coil-winding data. For L2, L3 and L6, wind only the coils needed to cover UHF channels in your area. The small coils can be wound around a nail. Solder the top ends of L2 and L3 to C1 and C2, being sure the turns go in the same direction. Solder the lower ends to the ends of a 1/16"-by-11/16" strip of thin metal, and solder the center of this to the subpanel as a common ground. This is a critical assembly. In all the tuned circuits, use little solder, and if possible no flux.

The link coupling, L1, is mounted by soldering its ends to the antenna input terminals. The coil should be as close to L2 as possible and concentric with it.

Assemble and solder the rest of the preselector stage on the subpanel, bonding the copper subpanel to the chassis with solder at several joints. The tuning screw of T2 must extend through the chassis, like those of C1, C2 and C3. The distance between T2 and L3 is critical; it should be exactly 1".

Wire up the crystal-diode mixer stage

next. Mount the single-turn link coupling, L4, directly under L3. Use caution in soldering to the crystal as it may be damaged by excessive heat. Wire the oscillator stage last, being careful to place the RF chokes RFC 2 and RFC 3 at right angles to RFC 1. Keep all leads as short as possible. Tweezers will help in this close work.

***Tuning the circuits.*** Check all wiring for shorts and errors. Test the tube beforehand if possible. Connect the UHF antenna to the pre-selector input terminals, and the output of the converter to the antenna terminals of the set, with 300-ohm twin lead. Plug in and turn on the converter.

Tune the set to an unused channel of the 2 to 6 group. Then tune the converter oscillator by adjusting C3 until a video and sound carrier is received. Next tune the pre-selector by adjusting C1 and C2 for best sound and best picture. Peak up the IF section by adjusting T2 for best reception.

Finally, bring sound and picture to best reception on the regular set controls. To go back to VHF channels, simply turn off the converter and reconnect a VHF antenna to the set terminals.

***If it doesn't work.*** If the converter has been properly wired it may work at first try. If the stations do not come in, the following checks are in order.

Check the tube for oscillation if possible. Often even a new tube will not "kick off" and work efficiently. You may have to try several. Oscillator frequency may be off because of too much capacitance in the circuit; try disconnecting C9. A tube shield or overly long leads may throw off oscillator or IF frequency. Make sure L1 is as close to L2 as possible to obtain sufficient band width. Try an adjacent VHF channel, running the fine tuning control through its full range.

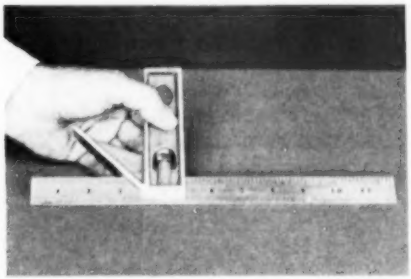
You may not be getting enough UHF signal. A combination antenna may work in favorable locations but not in others. Best results will be gained with a special UHF antenna.

A last trouble-shooting resort, if you are sure the antenna is delivering and the oscillator is putting out a beat frequency, is to connect the UHF antenna directly to the crystal diode and ground. If this works, something is wrong in the pre-selector.

Once the converter is working, the superior quality of UHF reception will repay your efforts, besides extending the useful life of your present set for quite a time. END

## Wallpaper Is Photo Backdrop

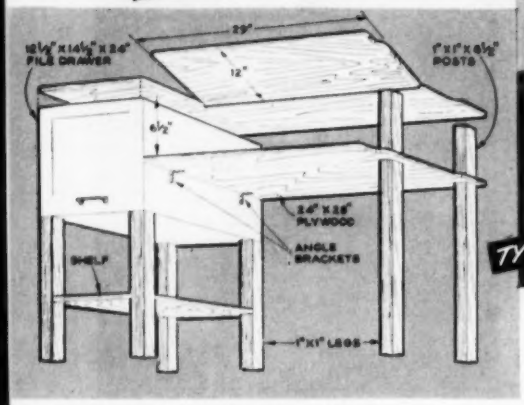
IN SHOP photography, cluttered backgrounds can muddle your photo. A roll of plain wallpaper will make a fine backdrop. I hang mine with clothespins on the end of strings. At the bottom, the roll rests in a V block. Light the subject normally, but pour lots of light on the backdrop. In the finished print, mask out everything outside the backdrop.—*Walter Haase, Hartford, Conn.*



## Lacquer Restores Old Rules

IF THE markings on a steel square are illegible, you can bring them back to life. Wire-brush off any rust or scale, sandpaper the steel bright and wipe it clean. Then coat the entire square with black lacquer. When dry, sand the lacquer off the smooth part. It will remain in the engraved markings.—*O. A. Nelson, Seattle, Wash.*

# One Evening Shop Projects



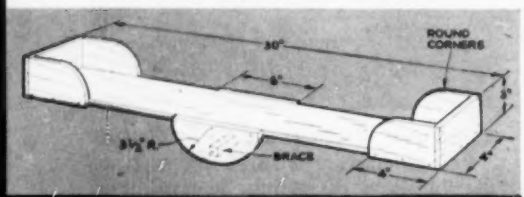
**FOR TYPING, part of the desktop folds back. Books behind support it at a convenient angle for reading copy clipped to it. A good-sized flat surface is made available by dropping the panel without moving the machine.**

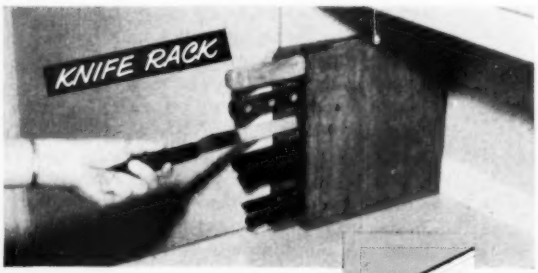
**Starting with a file drawer** mounted on legs, you can build this handy typing desk tonight—and still have time left over to write your best gal a letter.

If you don't already have a file drawer, you can probably buy one at a secondhand shop. Mount it on 18" legs with a shelf between.

For the bottom shelf of the desk, attach a piece of ½" plywood to one side of the drawer and support the free end with legs. Then saw a 29"-long section out of one corner of a 24"-by-43" plywood panel and hinge it along the cut. Fasten the panel to the file top and a 6½" corner post at the rear. The hinged part rests on ½" of the drawer and a second post at the right-hand corner.—*D. Macarov, Pittsburgh.*

**The doll family** can have its own seesaw at the cost of an hour's work and some scrap lumber. For this one, the rockers were jigsawed from ¾" plywood, the seats from ¼" plywood. A 3" length of scrap about ¾" square braces the rockers. The pieces are assembled with light nails.—*Bill Cartwright, Pittsford, N.Y.*

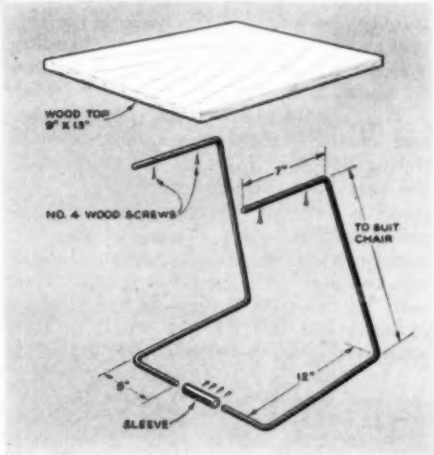




**The right knife** is always handy in this rack, and keen edges are protected. Cut shallow dadoes in a board, or file between parallel saw cuts, to form pockets for the blades. Screw this piece to a slightly longer board and attach to a cupboard side, door or wall. Drive escutcheon pins into the long board to support the handles.—*E. Britt, Westport, Conn.*

## CHAIR-ARM TABLE

**ROD CAN BE JOINED** with a sleeve made from ¾" aluminum tubing. Cut the piece lengthwise, wrap around rod and drill through the overlapping thicknesses into the rod. Use two rivets or drivescrews to hold each rod.

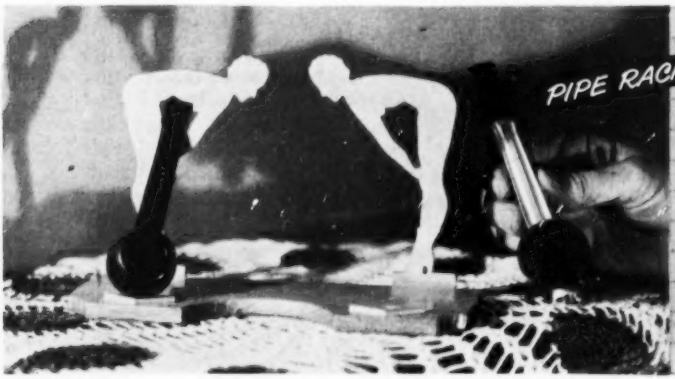


**Big enough for a writing pad,** a snack tray or a couple of books, this pickup table can be made from ⅜" aluminum rod now available in hardware stores.

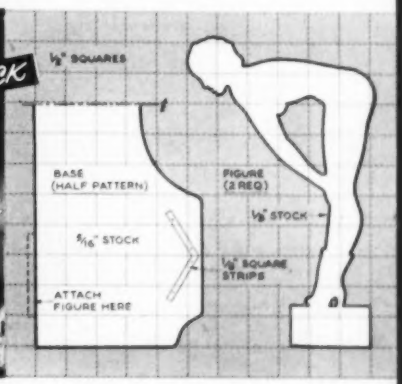
Bend the frame in two halves. Clamp the rod tightly in a vise with the desired bending point ¼" outside the jaws. A piece of ⅜" gas pipe slipped over the protruding part as a lever will aid in obtaining sharp bends. Correct slight errors by hammering. Do not try to rebend or the rod will crystallize and break.

The two halves can be joined by driving them into a tight-fitting piece of pipe and securing them with rivets or drivescrews. A sleeve also can be shaped from oversize tubing (see left above).

**Your pipes** may not taste sweeter, but they'll look better held by these pin-ups. Cut the silhouettes from thin stock, the base from thicker material. Brad short strips to the base as pipe rests. Attach each cutout with screws. Varnish all over, or give the base a natural, and the figures a black, finish.—*Clifton Morris, Lubbock, Tex.*



## PIPE RACK



## Traveling is simpler if you have

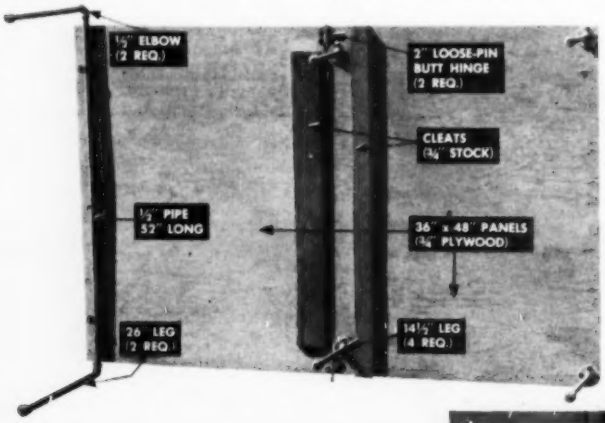
# A Double-Deck Station Wagon

***Luggage can be kept under this easily made sleeping platform.***

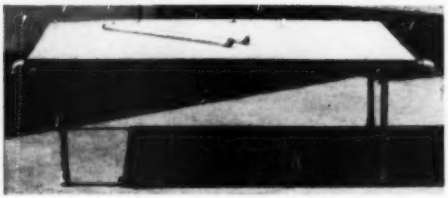
AS LOTS of people are discovering, station wagons can haul an immense amount of luggage and can also be converted to provide a long, flat deck in back. But they cannot do both at the same time. To use the rear floor for sleeping, you must restack the luggage at night or put it on the roof, where it may get wet or be stolen.

We found a way to have our cake and eat it too. The solution consists of a pipe-supported platform or sleeping deck of ¾" plywood, high enough off the floor to let a foot locker or standard suitcase slide underneath, but low enough to be below the window sills and the back of the front seat of our '53 Mercury. For easy handling, the platform is built in two halves, attached by loose-pin butt hinges.

This arrangement lets us use the center seat of the station wagon for passengers during the day. Luggage is stowed under the rear deck section, on which the front panel is laid for traveling. At night the center seat is folded down and the front panel erected by screwing on the forward legs and slipping in the hinge pins. Covered with air mattresses, the deck so formed makes a fine bed for two adults or three youngsters.—*W. B. Bernard, San Diego.*



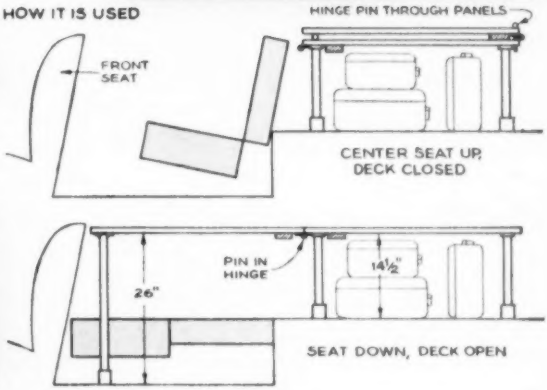
**BOTTOM VIEW of assembled deck. Cleats may be any available ¾" stock. Front pipe crosspiece is mounted with cable straps; other ½"-pipe legs screw into floor flanges. Panels are joined by a pair of loose-pin butt hinges, one leaf of each being attached to each panel. Hardware is mounted with ¼" carriage bolts.**



**WITH PINS REMOVED, hinges separate to permit stacking front panel on top of rear one, the 26" legs being unscrewed from elbows. To prevent top panel from sliding off, hinge pins go into holes through both panels near rear edge. Crutch tips protect car floor.**

**FOR DRIVING,** one deck panel lies on the other, leaving the center seat available. All the luggage shown here can be stowed under the back panel section, accessible from rear.

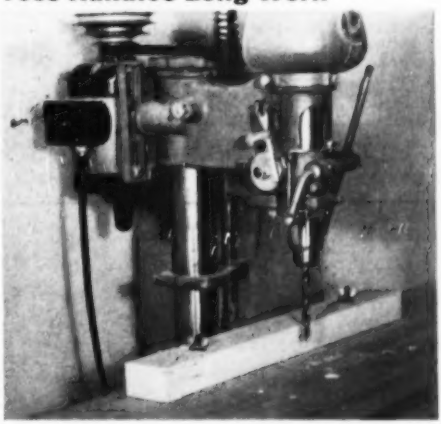
**FOR SLEEPING,** center seat is dropped, top deck panel slid forward, front legs screwed into elbows and pins put in hinges joining panels. Rear luggage need not be moved.



## Homemade Maple Table for Drill Press Handles Long Work

BUILT up of ¾"-by-1½" strips of maple glued together, this 12"-by-72" table presents a smooth, flat surface to support long woodworking projects for drilling.

Four countersunk ⅜" flathead machine bolts and nuts secure it to the slots in the drill-press table. A maple insert piece, ¾" thick, is set flush in the center of the table directly beneath the spindle. When it is chewed up by drills passing through the work, it can be replaced with a fresh plate. A maple fence held in place by two wing nuts is handy for shaping, routing or in-line drilling. Slots for the bolts permit quick adjustment. Rows of holes across the table are for bolting stops and jigs to it.—*Gordon D. Carlson, Minneapolis.*



# Kits Keep Cellar Shipyards Booming

***A kit this winter can mean a boat next summer. Here are some sleek models for '54.***

**1. BIGGEST KIT-BUILT BOAT,** says maker, is this 31′ cabin cruiser. Hull kit costs $1,675; cabin

GONE are the days when only hardy eccentrics and small boys dared build their own boats in the face of the experts' warnings. Today, home shipyards are springing up wherever there's room to lay out the frames. Boat kits, with precut parts and complete instructions, offer everything from tiny prams to 31′ cabin cruisers.

Whether you want to race a small sloop or a churning hydroplane, shoot ducks or troll for bass, take your family on a week's cruise or your girl for a spin, there's a kit boat to meet your needs. Outboard types predominate, but there are more and more kits for inboard power. Sailing-craft kits, however, are lagging except for the small prams.

Guided by thousands of users, manufacturers are making their kits easier to build. Some kits now come in shipping crates that double as jigs to hold the frame. A New England builder includes corrosion-proof Monel fastenings. Glass-fiber bottoms, immune to rot, are offered as extras.

If you're in the market, note carefully, in comparing kit prices, just what is included. Some kits provide everything; in others, paint and even hardware are extras. Marine-paint makers are getting in on the act with paint kits matched to specific boat kits—just enough for one boat of all the kinds of paint needed.

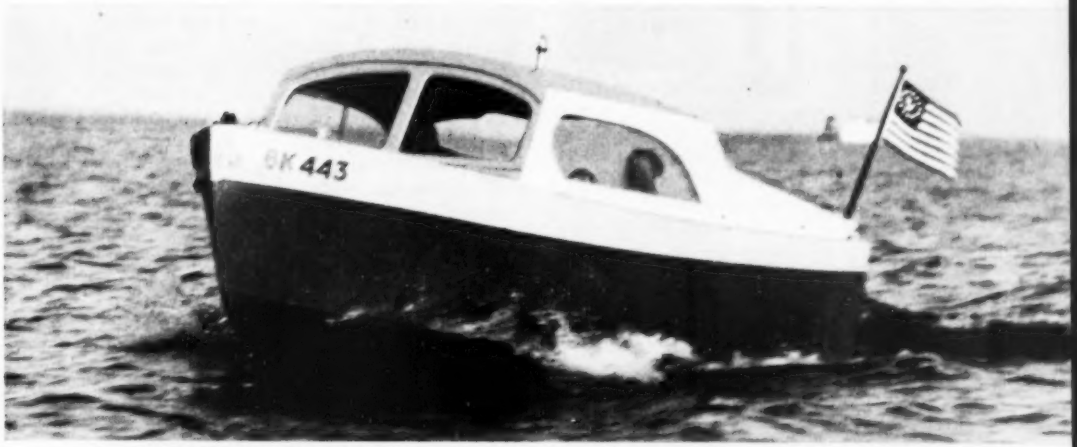
Here are some of the latest kit-built boats you'll see afloat this summer. Right now they are part of the great fleet a-building in cellar shipyards all over the country.—*Hartley E. Howe.*

*Further information about the boats pictured can be obtained from: 1. Chris-Craft Corp., Boat Kit Division, Algonac, Mich.; 2. Doane Marine Works, Shippan Point, Stamford, Conn.; 3. Custom Craft Industries, 1700 Niagara St., Buffalo 7, N.Y.; 4. Ozarka, Inc., Washington and Borden Lane, Woodstock, Ill.; 5. Acme Boat Co., Miamisburg, Ohio; 6. Luger Industries, 3207 Fremont Ave. South, Minneapolis 8, Minn.*

**3. CONVERTIBLE,** deep and beamy, offers plenty of room in its 18′. The folding top, an extra, has zip-on side curtains to enclose the cockpit. There are kits for both inboard and outboard types, costing around $400. Paint and hardware are extra.

**4. UTILITY OUTBOARD** is a planing type with a modified V bottom. Designed for hunting and fishing, it can be driven by a small engine for trolling if desired. Large seats and leg room offer day-long comfort. Kit, including paint and varnish, costs $154.50.

kit, including windshield, flooring, $635. It takes either single or twin inboard engines. Space is provided for dinette, galley, head, wardrobe, two berths.



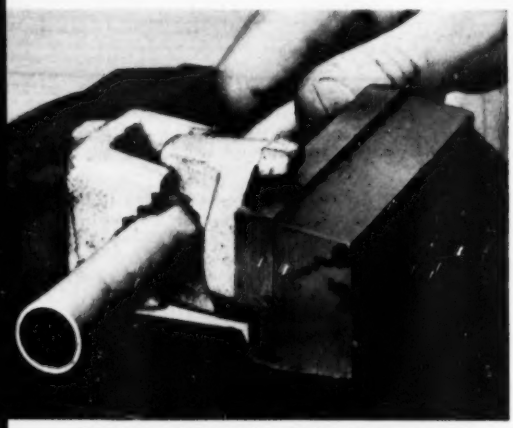
**2. CHEAPEST CABIN CRUISER** in the world is the claim made for this 14′ job that sleeps two. There are models for either outboard or inboard power plants in the five-to-16 hp. range, providing speeds up to 25 m.p.h. Precut kit with glass-fiber bottom is $269.

**5. SEMI-V-BOTTOM RUNABOUT** is fast yet sturdy for easy handling in rough water. Thirteen feet long, it is said to have speeds up to 50 m.p.h. with a 25-hp. outboard. Kits are priced from $165 according to decking and spray rails provided. Paint is extra.

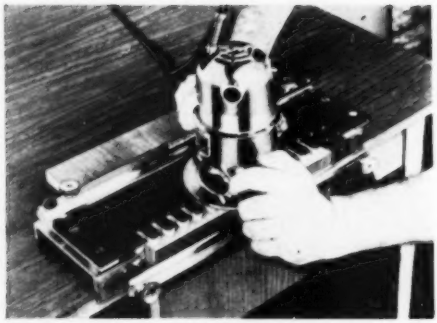
**6. CENTER-DECK 14′ RUNABOUT,** shown with 12′ sister in background, comes either as $147 de luxe model below, or slightly cheaper open type. Boat carries six passengers, steers from remote-control wheel forward. Kit provides fir-plywood panels, oak frame.

# New Tools

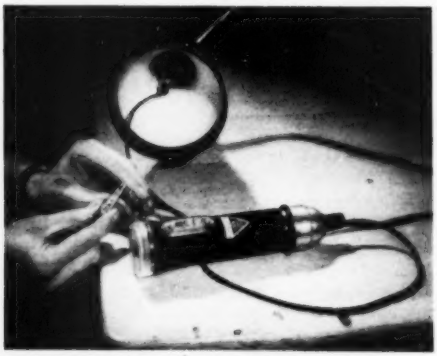
**1. Level Guaranteed Shatterproof.** This 24″ plastic level is built for a beating. The frame is plastic and the bubbles are molded into vials of protective clear plastic. The whole tool weighs 12 oz. The maker offers a new level if one should be broken in normal use.



**2. Jaws Help Vise Grip Pipe.** Pipe from ⅛″ to 2″ in diameter can be held in an ordinary vise with these adjustable jaws. A spring holds them in the vise.



**3. Template Used with Router.** This new template lets you use a hand-held electric router to cut dovetail joints with factory efficiency. An aluminum frame holds the two boards at right angles so the matching joints are cut at the same time. A template of laminated plastic, clamped on top, guides the router. Templates are available for either ½″ or ¼″ dovetails. The device handles stock up to 12″ wide and from 5/16″ to 1″ thick.



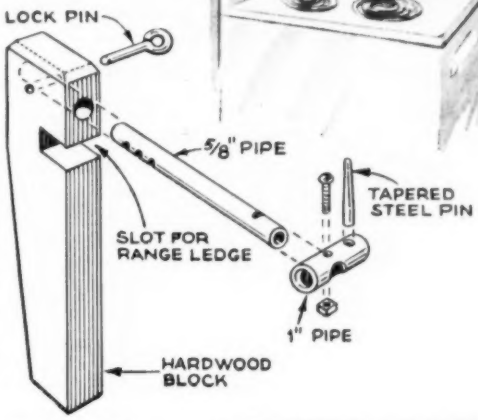
**4. Flashlight Tests Circuits, Too.** You can quickly check fuses, lamp cords, motor windings and other household wiring with this combination flashlight and tester. Two clip-on leads plug into the base and use power from the batteries for testing circuits with the house current shut off.

*Further information on these products can be obtained from: 1. Creative Plastics Corp., Stony Brook, Long Island, N.Y.; 2. H. A. Johnson, P.O. Box 62, Fruitvale Station, Oakland, Calif.; 3. Porter-Cable Machine Co., 28 Exchange St., Syracuse, N.Y.; 4. The Gadgeteers, 3041 Fullerton Ave., Chicago.*

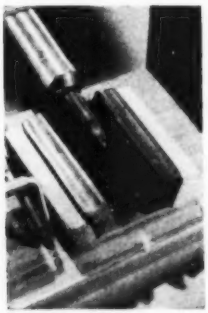
## Wood-and-Pipe Bracket Holds Mixer

A BRACKET to hold the electric mixer in working position over one of the stove burners makes it easier to cook foods that require frequent stirring.

This one consists of a hardwood block screwed to the range and bored for a supporting arm—a length of 5/8" pipe. The mixer hangs on a tapered pin driven into a hole drilled in the side of a short piece of 1" pipe. This pipe is drilled to slip over the arm at right angles and is bolted to it. A lock pin holds the arm at several positions in the mounting block. A plastic bottle cap closes the end of the arm to make a neat-looking job.—*Arne O. Salonen, Raymond, Wash.*



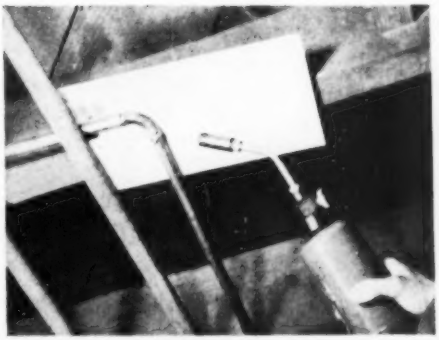
## Suede Brushes Clean Iron Tip



BRUSHES sold for cleaning suede shoes will do the same for a soldering-iron tip. Glue two on edge to angled wood blocks. Nail the blocks to your workbench or the iron carrier. Draw the hot tip through the brushes to clean it.—*Ken Murray, Colon, Mich.*

## 3-D Viewers Bent for Spectacles

KEEPING viewers for 3-D movies in place on regular spectacles is easier with this trick. Bend the bows of the paper viewers as shown and hook them over the spectacle bows. Friction holds the viewers tight.—*Hugh Lineback, Stillwater, Okla.*



## Asbestos Shingle Shields Torch

A SCRAP of asbestos-cement shingle—the kind used on house exteriors—makes good fire protection when you use a torch near studs or joists to sweat a joint in copper plumbing. Usually the pipe will hold the shingle against the wood.—*Lucien R. Greif, Thornwood, N. Y.*

## Bent Wire in Drill Stirs Paint

TO STIR paint, a workman I know chucks a piece of heavy wire in his electric drill after first making a right-angle bend on the end. For gallons he uses a 12" wire with a 2" turn, for smaller sizes 8" with a 1" turn. —*L. C. Auer, La Porte, Tex.*

# Homemade

## Electric Drill Runs This One . . .

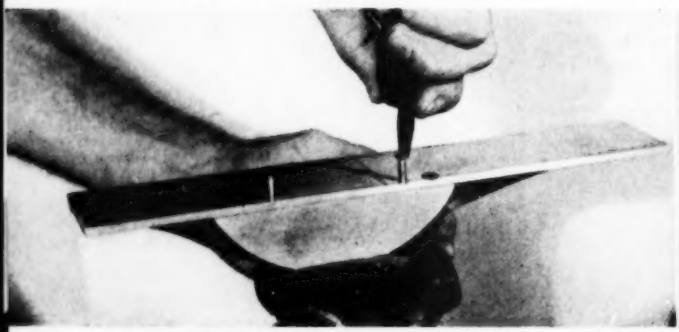
***For every hour you put into the building of one of these power planes, you'll get back two when you use it.***

BUILD one of these power planes and you can say good-by to the old washboard drudgery of planing wood. Spinning rotary blades shave as much as ¼" off the wood in a single pass. You can fit a door or storm sash in jig time.

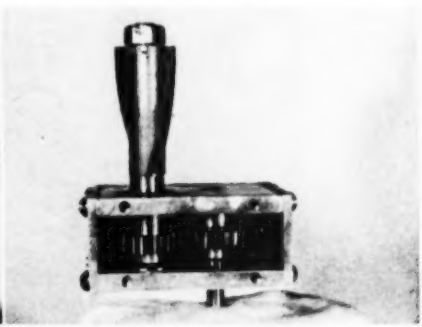
One of the planes gets its power from a ¼" electric drill, the other from a flexible shaft driven at 1,725 r.p.m. by a quarter-horse motor.

***Which should you build?*** The electric-drill plane is an all-metal job built by John Rogers of Dallas, Tex. It is ideal for ordinary use in a home shop. A step-up gearbox that multiplies the drill speed provides smooth cutting. It is light and gets into tight places where there's little room to swing a hand plane.

A hardwood block forms the body of the second plane, built by Bradford Dittmer of

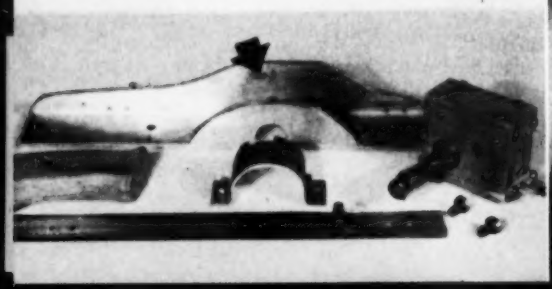


**FIT ARCH BRACE** to body of frame before cutting opening for cutter blade, to insure perfect fit. After fitting and threading screw holes, disassemble and finish cutting. Countersink holes for 8-32 flathead screws so they can't score work when plane is in use.

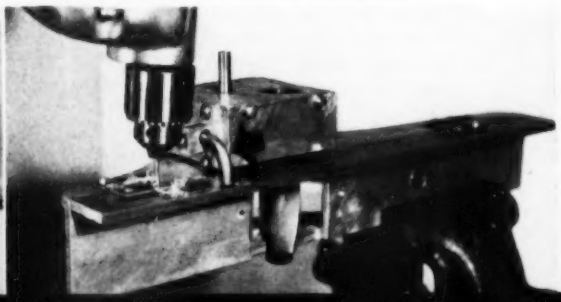


**GEARBOX** houses 36-tooth drive gear (Boston Gear Works No. G 261) mounted on ¼" shaft riding in two bronze bushings. Driven gear (16-tooth Boston No. H 2416) turns on 5/16" shaft and two ball bearings (New Departure No. 77038).

**READY FOR ASSEMBLY.** Mounting holes (arrow) should be elongated slightly to provide means of adjusting depth of cut or correcting small errors made in fitting parts.

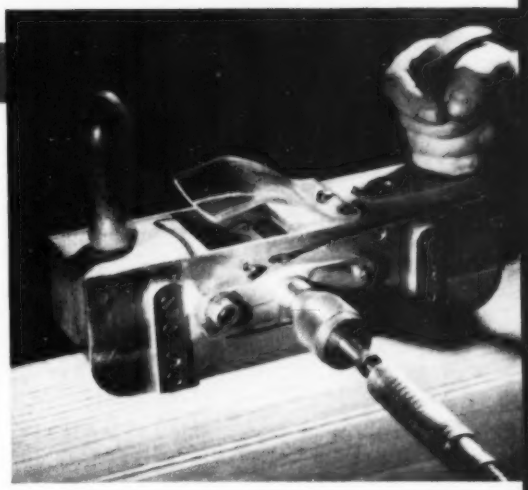


**ATTACH BEVEL GUIDE** to frame with two hinges. Bend adjusting arm (arrow) from ¼" bolt to form quadrant that slides in bracket on gearbox. Setscrew in bracket locks arm.



# Power Planes Shave Wood and Time

## . . . A Flexible Shaft This One



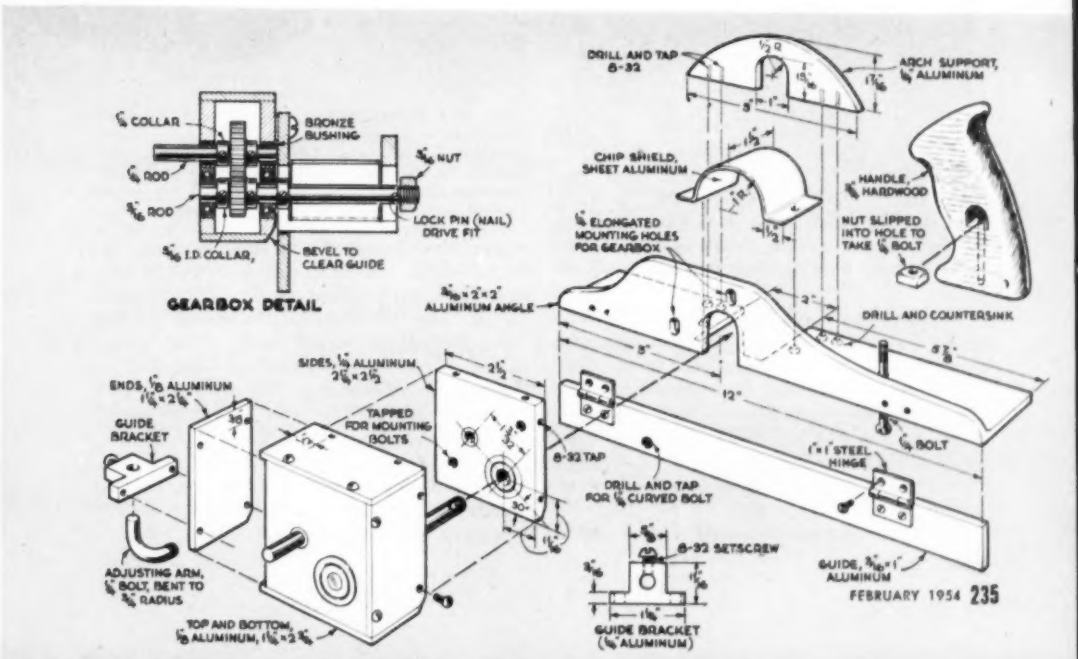
Bellmore, N. Y. Its huskiness makes it useful for heavy work—boatbuilding or smoothing rough lumber. A curved-bottom version of this plane is useful for shaping concave chair seats or planing contoured edges.

Some metalwork must be done to fit the bearings for the cutterheads in both planes. A drill press is practically a must to assure accurate holes. Other steps in the construction can be completed with files and a hacksaw. Cutterheads can be bought at any large hardware or power-tool dealer's. Write to Boston Gear Works, 480 Canal St., NYC, for gears and bearings.

## Electric-Drill Plane

SHAPE one side of a piece of dural angle, as in the drawing below, to make the backbone of the plane. All parts, including the gearbox, are attached to this. Fit the arch brace to the angle before cutting the openings for the cutterhead or its shaft, and tap the holes for the flathead joining screws. This insures that these parts will fit in true alignment *after* the openings are cut.

***Gearbox.*** Cut the sides, top, bottom and



ends for the gearbox from dural plate. Using a circle cutter set to a fraction less than the ball-bearing diameter, bore the openings in the sides. Check the spacing of the shaft holes by laying the gears in mesh on one of the sides, then drill holes for the bronze bushings. Assemble the gearbox and pack with grease. Mount it on the side of the body, moving it up or down in the two mounting holes to adjust depth of cut.

***Cutterhead.*** A Porter-Cable power-plane cutterhead (part No. PR 83 Y) is used in this plane. Its helical blades cut with a shearing action that leaves a very smooth finish. Drive a short nail through the shaft to pin the cutter to it before tightening the locking nut.

***Bevel guide.*** Attach this to the body with two hinges, using flathead machine screws driven into tapped holes to secure them. Bolt the adjusting-arm bracket to the gearbox and bend the arm from a ¼" bolt to form a quadrant that slides in the bracket. A setscrew in the bracket locks the arm to set the guide at the desired angle for planing beveled edges.

***Chip shield and handle.*** Cut the chip shield from sheet aluminum and bend it to fit over the cutterhead. Shape the handle from hardwood and insert a nut sideways into the transverse hole. Thread a flathead machine screw up through the bottom of the plane into the nut to lock it firmly in place.

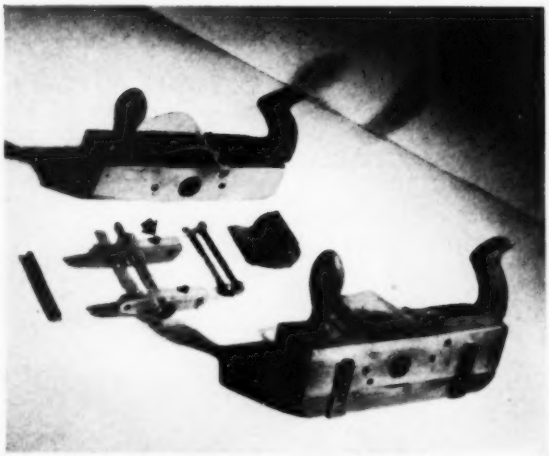
## Flexible-Shaft Plane

A SOLID block of hardwood sandwiched between two aluminum plates gives this plane a hefty feel. Cut the block to size and bolt the side plates to it. Then remove the sides and cut the center of the block away from the cutterhead. Made in this way, the body will line up perfectly when the bolts are again inserted in their holes. Easiest way to get the side plates identical is to clamp them together while boring and drilling the holes. Bodies of the flat plane and curved plane are made the same, except for the difference in their bottoms.

***Cutterhead frame.*** Shape both sides of the frame as one by clamping them together. Bore the large holes to an easy fit around the ball bearings, then cut the slots that clamp them in place by the squeezing action of the Allen-head screws. Drill holes at each end for the pivot and adjustment shaft. Elongate the forward hole so that the frame can be raised or lowered to change the depth of cut. Carefully made, the frame should fit both planes.

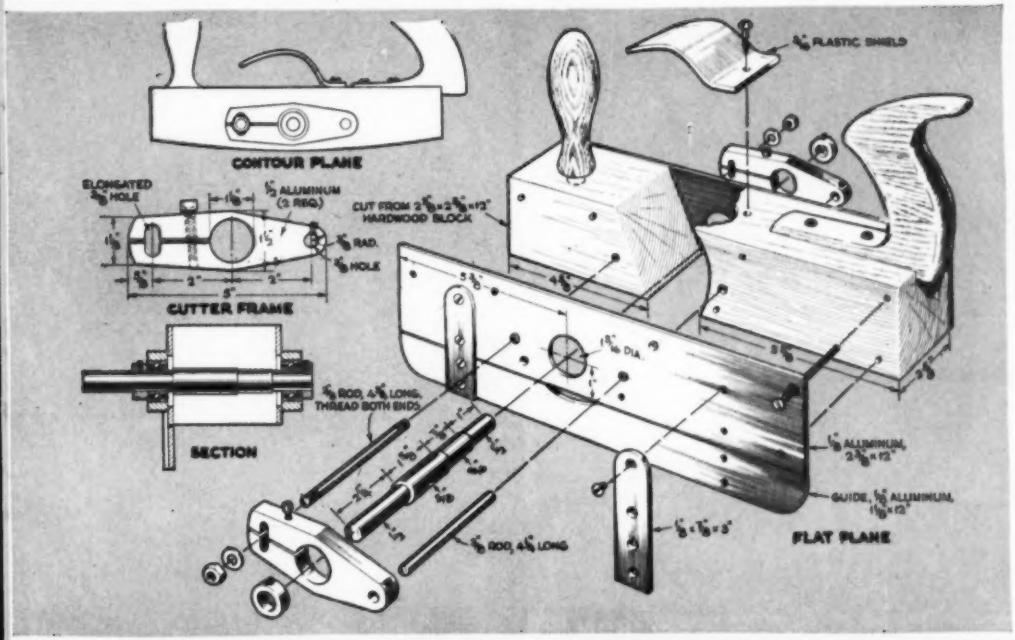
***Cutterhead shaft.*** The Shopsmith jointer head used here requires a specially turned shaft to fit its stepped bore. You can have this turned from the drawings at reasonable cost at a small machine shop. It has a ½"-diameter shank for use with a ½"-flexible-shaft chuck or heavy-duty electric drill. Two collars hold it in position in the bearings.

***Handles and chip shield.*** Two handles are needed to resist the back pressure of the ¼"-deep cut that can be made. The front handle is glued into a hole drilled for it. The rear handle is screwed to the top of the hardwood body. Use clear plastic, heated and bent to shape, for the chip shield.



**FLAT OR CURVED EDGES can be smoothed with this pair of planes that share a common cutterhead. Allen-head screw (arrow) draws slotted frame tight on bearings. Two collars position shaft in bearings.**

***Guide strip.*** Cut this from the same aluminum used for the sides and fasten it with two short strips screwed into the body. It is not adjustable, but can be removed for planing flat surfaces. No guide is used on the contour plane.



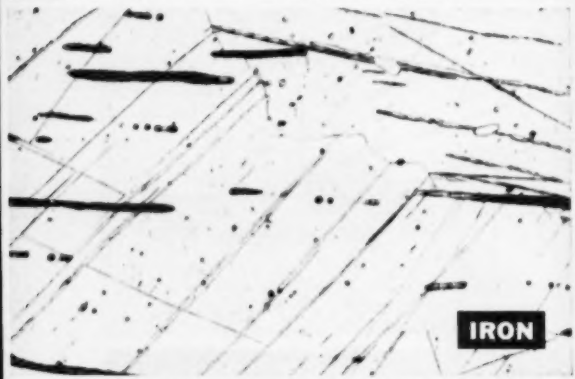
**DEPTH OF CUT** is adjusted by loosening nut (held in hand) and moving elongated holes in frame up or down on bolt. Frame pivots on length of drill rod locked in end holes with setscrews.

**FITTED CHEST** stores cutterhead assembly in cover, ready for use in either plane at a moment's notice. Screwdriver, wrench and Allen wrenches are included for setting up the planes and adjusting depth of cut.

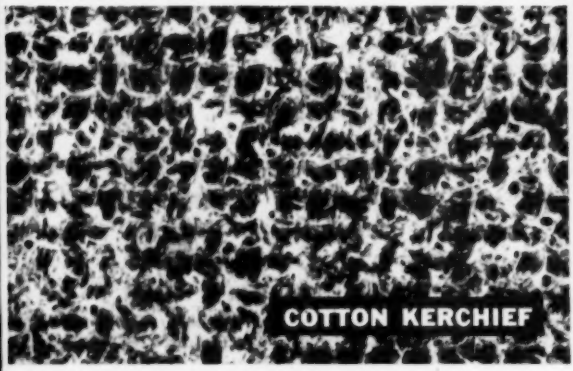
## TIPS ON USING POWER PLANES

- Maintain firm downward pressure on the forward end of the plane to keep it from rocking down into the already-planed surface.
- Wherever possible, plane along grain that is running upward to the surface. Planing downhill grain will tear out splinters.
- If plane chatters, inspect depth of cut adjustment and tightness of lock nut holding cutterhead on shaft.
- Rest plane on two blocks of wood when not in use to keep cutter off bench top.
- Pull wall plug or remove plane from drill chuck when adjusting cutter.
- Clamp or brace work securely when planing.

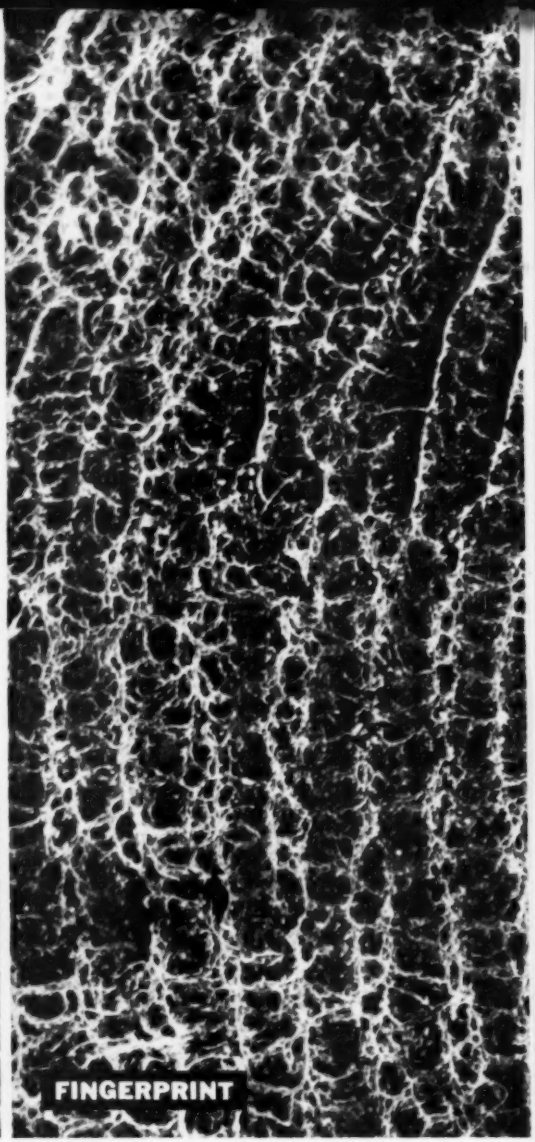
BEETLE BELLY



IRON



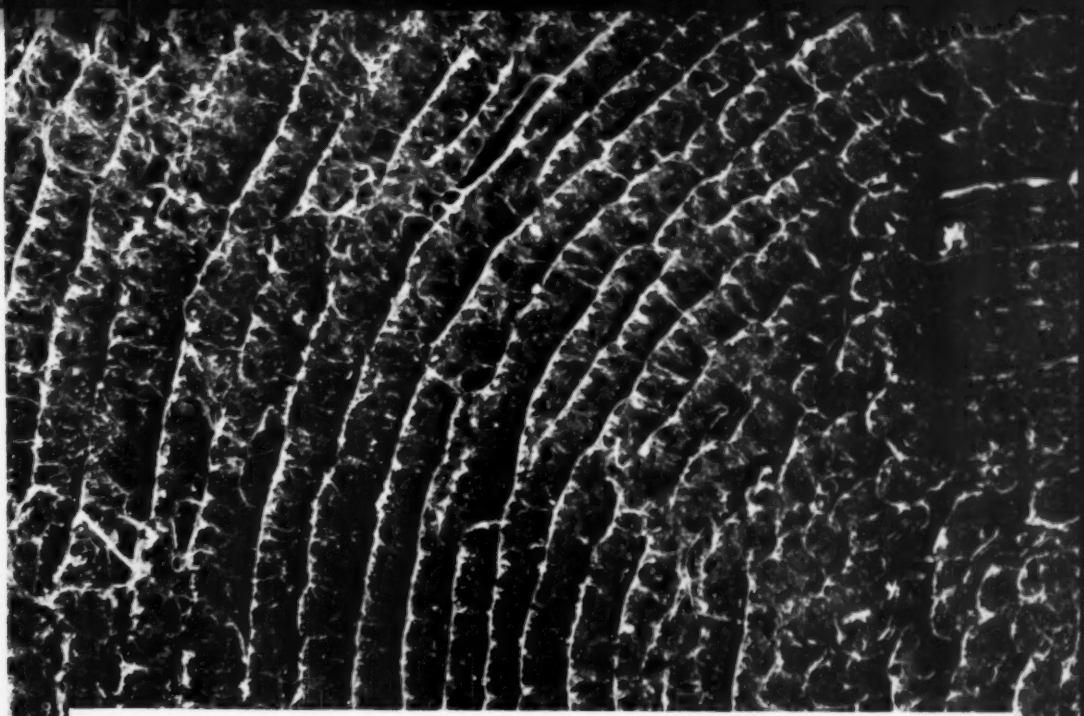
COTTON KERCHIEF



FINGERPRINT

## HOW IT'S DONE

**MAKING PHOTOMICROGRAPH** starts by brushing acetate-acetone mix onto clear acetate film. Then softened film is pressed hard against subject (center, below). Peeled off a minute later, it carries impression of surface. Film is now inserted in protective mask folded from stiff gummed paper with a 3/8" hole in center. This acts as film carrier in the enlarger, provides space for data. When excess is trimmed, film is ready for enlarger.



# How to Picture Details Your Eyes Can't See

***These photomicrographs were taken without a camera. To make them, you use only an enlarger and common chemicals.***

THE whitecapped surf sweeping across this page is really a germ's-eye view of a human fingerprint. At the top at the far left is a very, very close-up shot of the regular hairs on the belly of a water beetle named Hydrophilus. Below it is a sheet of iron, magnified a thousand times so that you can see the black needles and dots of a nitrogen compound, and parallel lines where layers of atoms have slipped under shock. At the bottom is the way a cotton handkerchief looks to a moth.

All of these pictures are photomicrographs—highly enlarged photos of microscopically small detail. Such photographs can give you fascinating insights into an invisible world. But taking them by the usual methods is one of the hardest kinds of photography. Even experts with fancy cameras, high-power microscopes and delicate lighting systems must have not only great skill but infinite patience.

But the man who took these photomicrographs didn't even use a camera, let alone a microscope and fancy lights. His equipment was simply a good photographic enlarger and such common materials as safety film, acetone solvent, gelatin and glycerin. You can use his method—and stump the experts.

***How you do it.*** Your "negative" is a transparent impression of the surface you want to photomicrograph. The surface irregularities on the transparency may be almost invisible, but in the enlarger they will bend the light rays to produce an

image. Since your transparent impression, unlike a conventional negative, has no grain, it can be blown up to the full capacity of the enlarger. Greater enlargements, such as the thousandfold magnification of iron shown, can be obtained by making a film negative of the biggest projected image and then enlarging this.

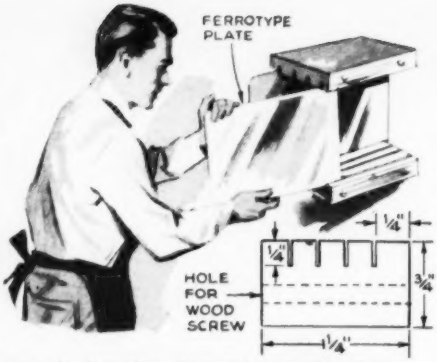
You prepare your transparency by softening the face of clear safety film—acetate—with acetone solvent. Slow up the evaporation of the acetone by adding one part acetate, made from clear film snips, to 50 parts solvent, measured by weight. Brush this mix onto one side of the safety film. (Clear film can be obtained by developing an unexposed strip.) Press the film, soft side down, firmly onto the surface to be pictured. Peel the film off when dry and it will carry the impression.

When you project this impression in your enlarger, you will find that stopping the lens down will make all parts of the image sharp. This is something you can't do with a conventional photomicrograph, where the depth of field is negligible. Use a normal or hard glossy bromide paper for the final print.

***There's a second way, too.*** You can't use this process on some surfaces that are so soft or so delicate they would be damaged by forcing the acetate film down on them. These can be photomicrographed by making a transparent casting with a mix of equal parts of powdered gelatin and glycerin. Heat the mix on a water bath at about 140° until homogeneous. A little water aids solution but too much is fatal. The exact proportions will vary slightly according to the properties of the gelatin you're using. Experiment until your mix solidifies at 105° to 120° F. and sets instantly when suddenly cooled to below 85° F.

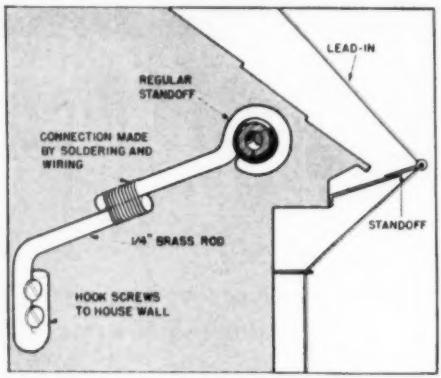
Smear your mix on a slide and put the object on it. Then hold gelatin, slide, and object under cold running water to set your casting. Stripped off half an hour later, it can be used as a negative the same way as the acetate impression.

These gelatin castings will last only a week or so, before they become distorted. If they are left too long in the enlarger, the heat will ruin them. But with this technique you can even photograph delicate insect hairs that blur when shot through a microscope.—*H. Courtney Bryson, Lisbon, Portugal.*



## Rack Holds Ferrotype Plates

FERROTYPE plates used in drying glossy photos are neatly stored in this convenient rack fastened to a darkroom wall. Vary the length and width of the blocks to suit the number and size of plates to be stored. Saw slots ¼" deep. Screw the unit to the wall.—*John J. Rea, Urbana, Ill.*



## Rod Stands Off TV Lead-In

THE longest standoff I could obtain couldn't keep my TV lead-in from resting on the roof overhang. So I soldered a ¼" brass rod to one end of a regular standoff. I bent the other end of the rod into a hook and fastened it firmly to the house with a couple of screws—*David B. Grant, Nashua, N. H.*

## Movie Film Stored in Tape Can

I FIND that a cellulose-tape can is just right for storing my 8-mm. movie film. Fifty feet of film fits nicely into a large can for ¾" tape. A moistened blotter placed in the bottom of the can keeps the film from drying.—*Lynn Zettlemoyer, Allentown, Pa.*

**PLANK FLOORS,** found in many new homes, are usually laid in random widths like floors of colonial days. Most planks are blind-nailed along the edges, but are also fastened with screws at ends. Screw holes are plugged with wood of contrasting color as above.

# How to Choose from New Types of Wood Flooring

***Strip flooring is still by far the favorite, but today you'll also find new varieties that you may prefer underfoot.***

**By Darrell Huff**

WHAT kind of wood floor would you like? Name it, and most likely you can have it. But with so many kinds of wood to choose from, offered in so many dimensions and patterns, it can be pretty confusing. Here's a guide to wise selection:

- Your basic choice is among three general types—strip, plank or block.
- Next you'll choose the wood—not only what variety, but also the kind of grain, grade and thickness.
- Unfinished or prefinished flooring will be a choice offered you in some types. The unfinished kinds call for more work, of course; the prefinished, for more money.

***Strip flooring*** is what people usually mean when they say simply "hardwood floors." It's losing ground to block and plank types but it's still far and away the champ in popularity. The most commonly

used kind of strip flooring consists of oak boards tongued and grooved on edges and ends, 25/32" thick and 2¼" wide. Or it may be 1½", 2" or 3¼" wide. A variation calls for alternate strips of 2¼" and 3¼" widths. All dimensions are actual and do not include the tongue width.

If you are laying a new floor over a sound old one, you'll very likely prefer to use thinner flooring—⅜" or ½". These won't raise the floor level so much and they cost less.

T-and-g strip flooring is made in these dimensions in white and red oak and in beech, birch, hard maple and pecan, less often in other woods. You'll also find hemlock, an excellent softwood flooring, in 25/32" x 2¼".

This kind of strip flooring is laid by blind or "secret" nailing—diagonally through the tongues. It is face-nailed only along edges where molding will cover. Don't try to economize on nails—they're the answer to squeaky floors.

Less often found is square-edge strip flooring, which you simply butt together and face-nail. Nailheads are set and holes filled before finishing. Oak square-edge strips are commonly made in 5/16" thickness, 1½" or 2" wide. In maple, birch, beech and pecan they are usually 25/32" thick, 2½" and 3½" wide. You can use 1⅛" barbed wire flooring brads with No. 16 heads. Put two nails every 7".

***Plank flooring*** is the kind you're seeing more and more in new homes, particularly those of ranch style. It is usually laid random width. As with strip, the most usual type is tongued and grooved on edges and ends, although some varieties are not end-matched and others are square-edged all around. Usual thickness is 25/32" or 13/16" or, in a veneered type, ⅝". Widths run all the way from 3" to 9".

Most plank flooring is blind-nailed like strip, but it needs more than that to hold it securely because so many of the boards are so wide. The usual method is to put one or two 1½" No. 12 flathead wood screws near the ends of the boards and additional screws or face nails at intervals of about 30". Screw holes are counterbored and heads covered by pegs made for this purpose.

A popular variation is called Ranch Plank,* prefinished strip flooring laid in alternate 2¼" and 3¼" strips with blind nailing alone. Since it contains walnut plugs already set in, it looks much like traditional plank.

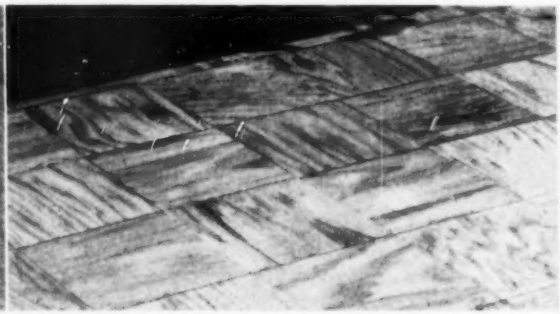
Quite different is a plank-effect flooring called Broadboard. It is laid in mastic without any nailing, much like asphalt tile. It can be fastened to almost any sound subsurface—wood, plywood, terrazzo, old asphalt tile. It can even be laid directly over concrete slabs without sleepers.

Broadboard is made of 3/16" oak, prefinished blond or medium, is 9" wide and comes in 4' to 8' lengths. Almost invisible slits every half inch, top and bottom, reduce expansion problems and let the flooring conform to slight subfloor irregularities.

***Block or parquet*** is the other big comer. Fine parquetry is mighty expensive and has always been associated with public

**Further information about Ranch Plank can be obtained from E. L. Bruce Co., Memphis, Tenn. Broadboard is a product of Parkay, Inc., Louisville, Ky. West Coast Vertical Grain 4-Square, also mentioned in this article, is made by Weyerhaeuser Sales Co., St. Paul, Minn.*

**STRIP FLOORS of narrow boards are the most popular type. One shown above is oak and may be bought either unfinished or prefinished. Strip comes in a wide variety of woods, grains and grades. The prefinished type is ready to use as soon as it is nailed.**



**LAMINATED BLOCKS shown above are made of three plies of oak. A half inch thick, they are made especially for use over concrete, the three plies increasing stability and usually making waterproofing of base unnecessary. They can be used over radiant heating slabs.**

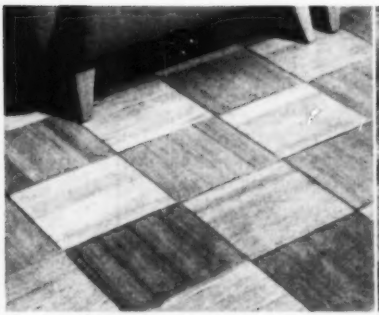
**In using mastic, shown above, select variety recommended by manufacturer of your flooring.**

buildings or mansions. Modern block types, however, are within the cost range of other flooring and are found with increasing frequency in modest houses.

The basic type is 9″ square and ½″ or 25/32″ thick. It usually is tongued and grooved and may be laid in mastic over concrete, or nailed to a wood subfloor or old floor. Other types are laminated for stability, or slit to make them extra flexible.

A new development brought on by the increasing use of radiant floor heat is 8″ square tiles of 5/16″ gothic oak, each tile being made up of four strips. The strips cut down the expansion problem and the gothic oak itself—long considered a fine cabinet wood—expands only one-fourth as much as plain oak under changes in humidity. Gothic oak is also offered in foot-square tiles consisting of four 6″ squares flexibly cemented together.

Still another handsome parquet type is a basketweave pattern of foot-square blocks composed of 2″-by-4″ and 2″-by-2″ pieces. These ¾″-thick units are made in gothic, blond and medium oak, walnut, mahogany



**SOLID BLOCK floors, like one above, are increasingly popular. They come either unfinished or prefinished, can be laid in mastic over concrete or nailed to wood subfloor.**

**PREFINISHED OAK BLOCKS above have fine slits for extra flexibility in laying over rough base. The blocks are only 3/16″ thick and can be laid over any surface.**

**STRIP BLOCKS are made of mixed hardwoods. They come prefinished and are cheaper than most types. The blocks can be put down on top of either concrete or wood.**

and teak. Like all the other special types described above, this comes prefinished.

***What kind of wood?*** Most hardwood floors are oak, made of the nine varieties classed as white oak or the 11 called red oak. Red oak has a pinkish cast rather than brownish and finishes to more of a reddish brown. White oak is somewhat more uniform in color, may be slightly easier to finish. One gives as good a floor as the other. In both you have a further choice between plain and quarter-sawed. The latter gives a prominent figure you may or may not find preferable.

Next in popularity is hard maple. It is harder than oak and will take heavier wear, a quality more valuable in gymnasiums than homes. The grain and figure are much less conspicuous than in oak and there are no pores to fill in finishing. Birch and beech make a very hard floor, much like maple. Pecan is harder and darker in color than other common floor woods.

Hemlock, though technically a softwood, makes a floor that can be both handsome and durable at relatively low cost. The maker of a variety called West Coast Vertical-Grain 4-Square calls it the "hard softwood" and offers it in the tongued-and-grooved and end-matched pattern.

All the woods mentioned here are widely used in strip flooring. You may not be able to find block and plank types in anything except oak.

***Prefinished?*** Whether you choose strip, plank or block flooring, you can find both unfinished and prefinished types. In some you'll have a choice between light and medium shades.

If you have sanding equipment available you can save a good deal of money by doing your own finishing. You'll earn the money, of course.

Prefinished flooring permits you to use the floor as soon as it is laid and insures a good and lasting finish. In a remodeling job it avoids the mess made in an occupied house by sander dust.

If you decide to buy an unfinished flooring, it is worth keeping in mind that most manufacturers now recommend penetrating sealers in preference to the older stain-and-varnish treatment or shellac or lacquer. Penetrating sealers usually look good longer, can easily be refinished in worn spots, don't chip or scratch. They give a good deal less shine to the floor but not everyone will consider this a drawback.

***What grade?*** Any grade of wood will give a good, sound floor. Higher grades simply are freer of knots, streaks, sapwood, variations in color and small manufacturing defects that have little to do with strength

## WOOD FLOORING

This table applies to the most common sizes of tongued-and-grooved hardwood strip flooring. First column gives the actual dimensions of the flooring, including width covered by each piece. Second column gives size the flooring is counted as in figuring board feet. To find the number of board feet to buy from the square footage of the room, add the percentage shown in the third column. It includes 3% for waste in cutting.

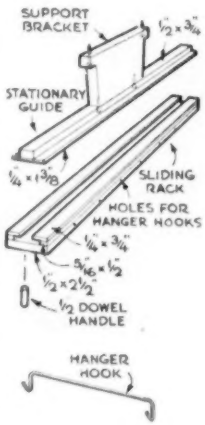
| Actual dimensions | Counted as | Add to sq. ft. of room to find bd. ft. needed | Usual nail size | Maximum nail spacing |
|---|---|---|---|---|
| 25/32"x3¼" | 1"x4" | 27% | 8d | 10"-16" |
| 25/32"x2¼" | 1"x3" | 36% | 8d | 10"-16" |
| 25/32"x1½" | 1"x2¼" | 53% | 8d | 12"-16" |
| ½"x2½" | 1"x3" | 23% | 6d | 10"-12" |
| ½"x2" | 1"x2½" | 28% | 6d | 10"-12" |
| ⅜"x2" | 1"x2½" | 28% | 4d | 8"-10" |
| ⅜"x1½" | 1"x2" | 36% | 4d | 8"-10" |

FOR YOUR *POPULAR SCIENCE MONTHLY* INFORMATION FILE

## Sliding Rack Brings Out Pots

A SLIDING rack like this will end the clatter that usually occurs when a pan is taken from a kitchen cabinet. The stationary guide and supporting bracket is a single unit. Make it from three pieces of clear pine as the drawing shows. Screw the parts together after spreading the joining surfaces with glue. Center the bracket under the cabinet top and screw it in place.

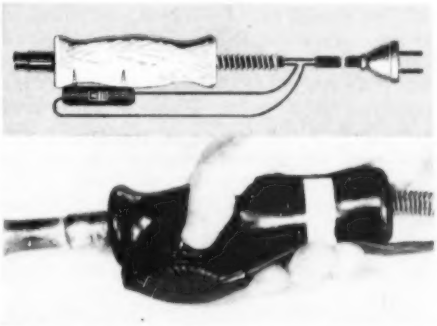
Make the sliding rack from five strips of clear pine to form a T groove. Join these with glue and screws. Use 11" lengths of No. 9 steel wire for the hanger hooks if some of your pots are heavy. Otherwise, coat-hanger wire will do. Bend one end to shape and slip the wire through holes in the sliding unit, then bend the other end. Sand all parts smooth and finish with paste wax for good looks and easy operation. *—Dean Keach, Fairview, Ill.*



## Dowel Glues Bandsaw Tires

AS INSTRUCTOR, I was faced with the job of putting new rubber tires on our school-shop bandsaw. These had to be cemented, and the directions that came with them suggested using "several helpers" or stretching a tire over a circle of nails and sliding it from these onto the wheel.

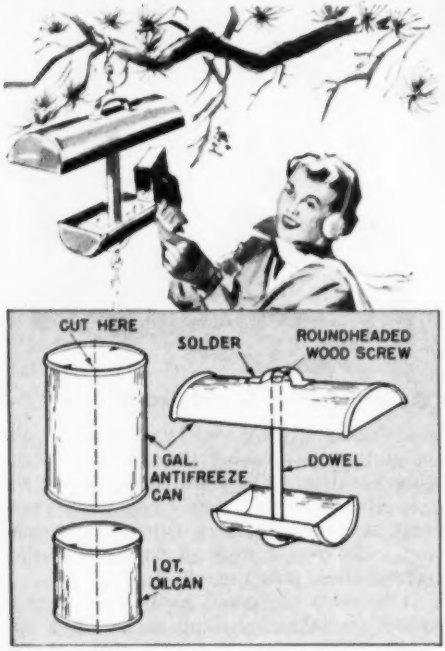
I found a tire could easily be put on a wheel singlehanded if no cement was applied. Having done this, I inserted a dowel under the tire and applied cement behind it while gradually working the dowel around the wheel.*—J. A. Schulze, Commerce, Tex.*



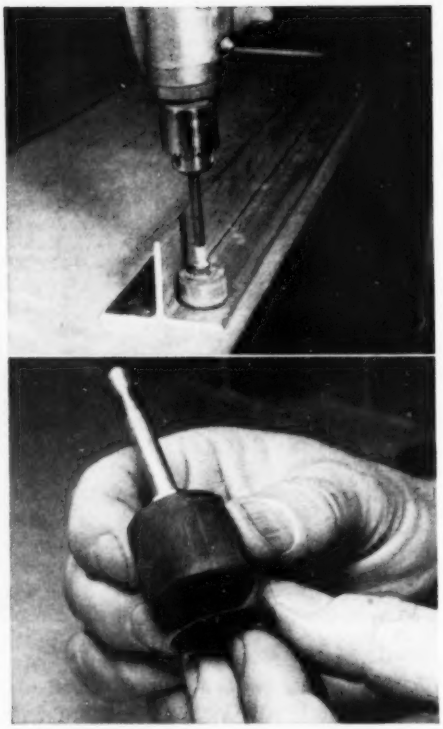
## Switch Handy on Soldering Iron

INSTEAD of reaching for the plug every time you use a soldering iron, mount a feed-through switch on the handle to turn it on or off as needed. Separate the halves of the plastic case and screw one half to the handle of the iron. Hook up the wires and fasten the second half. Splice the two wires running from the switch into one leg of the line cord and tape them to the handle. *—John J. Rea, Urbana, Ill.*

## Bird Feeder Cut from Tin Cans



Two tin cans, one a quart oil container, the other a gallon antifreeze drum, are cut Quonset-hut-wise to form the roof and seed holder of this novel bird feeder. A length of broomstick or 1" dowel, attached to their centers with round-headed wood screws, connects the can segments. Strips cut from discarded tin stock are looped and soldered above each screw to form eyes from which the feeder is suspended and anchored to prevent swaying. A coat or two of bright paint makes the feeder ready for business.—*Howard E. Moody, Upper Jay, N.Y.*



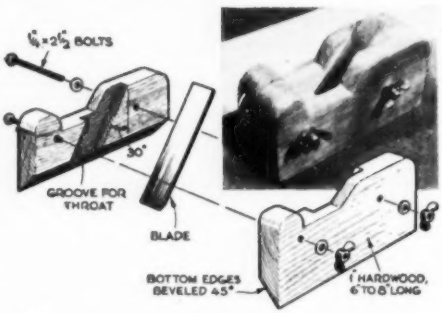
## Rubber Plug Holds Emery Disk

You can clean or polish flat metal surfaces fast by a method used in the Convair aircraft plant. Drill a 3/16" hole in a rubber plug or stopper, put a nut and washer on a ¼" bolt, and turn the bolt into the plug. Tighten the nut against the washer. Chuck the bolt in an electric drill, lay a disk of emery paper on the metal and press the plug against it. Friction will hold the disk in place as it spins.

## Homemade V-Bottomed Plane Cuts Uniform Chamfers

Chamfering is no trick at all with this homemade plane. It holds the angle and regulates the depth of cut as it straddles the corners of wood projects.

Shape the two cheeks, or sides, from hardwood. Cut a groove on a 30° angle on the inside face of each and bevel the bottom edges 45°. The grooves form the throat for the blade (piece of power hacksaw or tool steel). When joined they should be slightly less than the width of the blade so that pressure will lock it in. Depth of cut is set by tapping the blade down.



# Storage Drawers Slide Under Bed

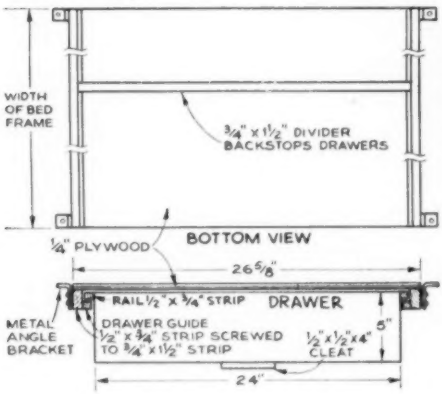
***Build a pair of these units and you can present your wife with some usable space she never knew she had.***

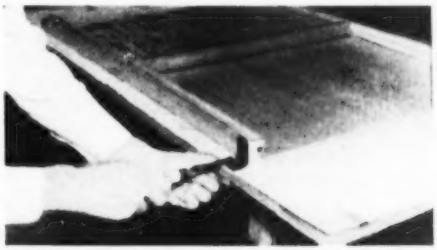
**By John Rogers**

If your wife is like most others, she wants more storage space. Here's a way to give her some that's been right under her nose—the unused space under a bed. Two drawers set back to back provide on-the-spot storage for bed linen and blankets. If one side of a bed is pushed against the wall you can put two drawers side by side.

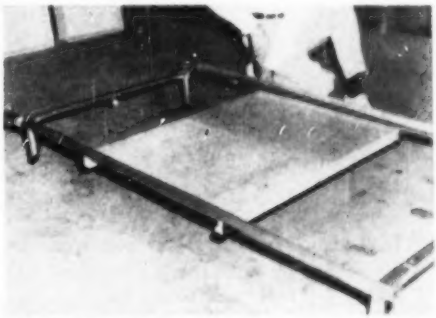
First step is to measure the width of the bed and cut a piece of ¼" plywood to fit across. Cut the plywood 26⅝" wide—or to suit the width of the drawers you plan to build. This panel supports the drawers on L shaped guides. Make each guide by screwing a ½"-by-¾" hardwood strip to a ¾" by-1½" strip that has been screwed on edge to the plywood support panel. Spread glue on the meeting edges before screwing. Screw a divider strip across the center of the support panel to backstop the drawers. Bolt or screw this assembly to the underside of the bed frame, using metal angles.

Make the drawers from ¾" white pine with ¼" plywood bottoms, following conventional drawer construction. The length of the drawer sides will be the distance from the edge of the support panel to the center dividing strip. Glue and screw ½" by-¾" cleats on the sides of each drawer to slide in the bottom guides.

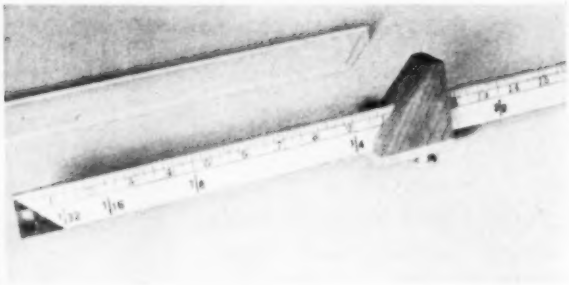


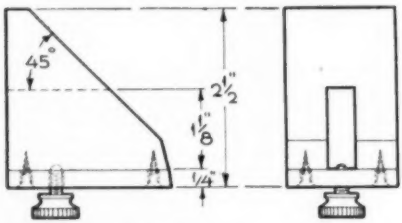


**METAL ANGLES** are screwed to drawer guides, then bolted or screwed to underside of bed frame. The drawer guides are assembled on ¼" plywood panel that fits across bed.



**PLYWOOD PANEL** acts as dust cover over the drawers, besides supporting the drawer guides. Two drawers fit into the unit, one from each side of the bed. Drill holes through bed frame to bolt metal angles fast.



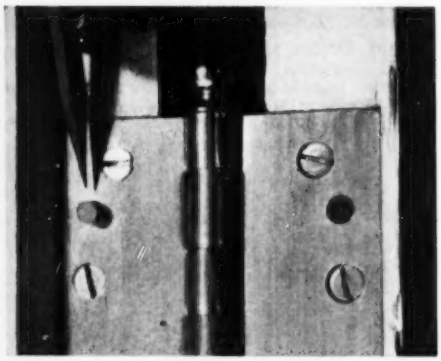


## Yardstick "Slide Rule" Measures Miters for Frames

SET this gauge to the size of the picture you're framing and use it to measure the miters. Regardless of the depth of the rabbet, the molding will fit.

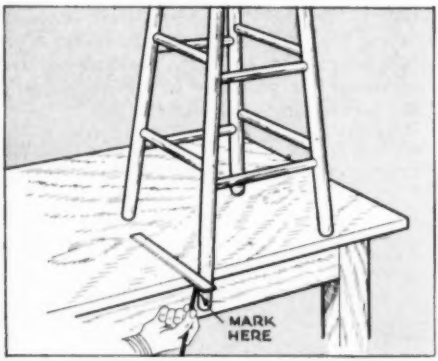
Cut the sliding block from 1½"-thick hardwood and groove the center to straddle the yardstick. Screw an aluminum or hardboard base plate to it and tap it for a No. 10-24 thumbscrew. Paint a 45° angle on the end of the yardstick, starting it at zero.

To use the gauge, cut a miter on the right end of the molding. Set the gauge for the length of the picture and lay it *in* the rabbet with the angle of the block flush against the mitered end. The point where the edge of the painted angle appears from under the rabbet is the true length of the molding. Make a pencil mark at this point for cutting the second miter.—*Arthur Volz, Dayton, Ohio.*



## Stud Interlocks Butt Hinges

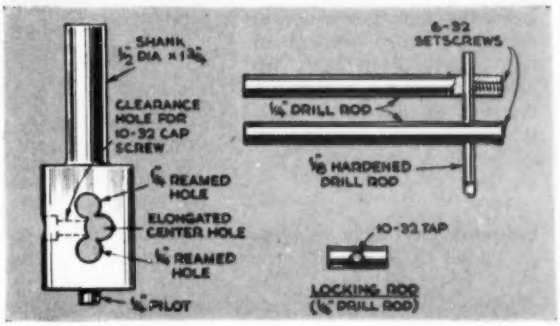
EVEN though the pins are removed from butt hinges, this trick keeps the door from being opened. Drill through both leaves while they are folded together. Tap one hole for a stud. This fits into the other hole when the door is closed.



## How to Shorten Stool Legs

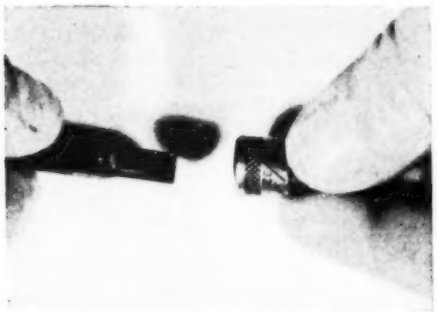
A STOOL or chair won't wobble when you shorten the legs if you do it this way. First cut three legs by measuring down from the seat. Then set the stool on a flat table top and use a ruler laid on its surface to mark the fourth leg.

# NEW Shop Ideas



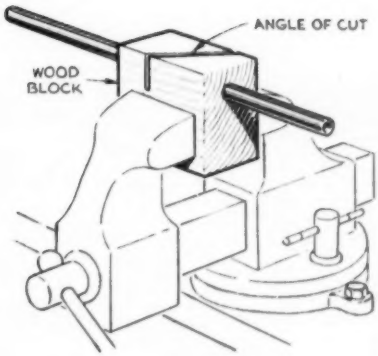
**Circle Cutter for Drill Press.** A single setscrew locks both arms of this circle cutter at any desired radius by pulling a short length of drill rod against them, wedging them securely.

Turn the body from 1" drill rod and mill or file a flat on one side. Drill three ¼" holes through the flat side and elongate the center hole with a round file. Drill and tap one end of each arm for the setscrews that hold the cutter in place. Shape the cutter from a piece of ⅛" drill rod. Assemble the parts and drill a clearance hole for the 10-32 setscrew that tightens the locking rod. Drill and tap the locking rod for the setscrew. Clamp work when using it.—*Gus W. Hall, Brooklyn.*



**Screwdriver Turns Small Sockets.** A heavy-duty screwdriver that has seen better days can still serve as a useful addition to your set of small ¼" drive sockets.

Grind or break off the screwdriver blade and grind the end of the shank square to fit snugly in the ¼"-square drive holes in the sockets. It makes a handy tool for reaching nuts and boltheads in hard-to-get-at places.—*Pvt. Philip E. McCafferty, Fort Bliss, Tex.*

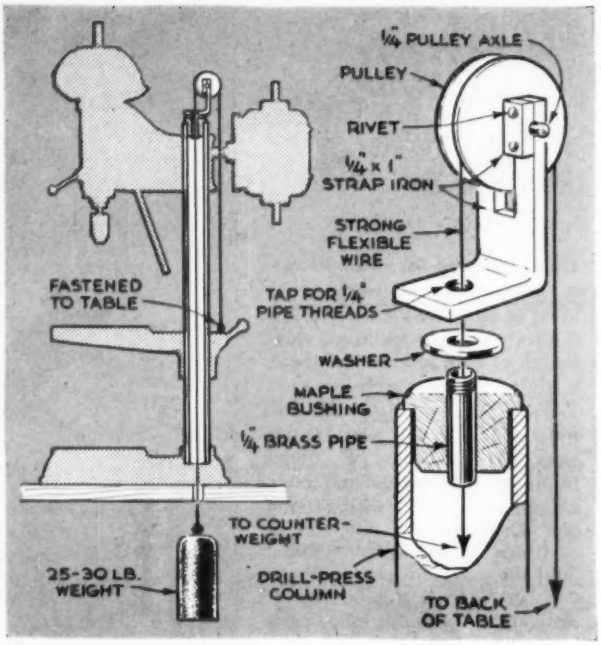


**Block Guides Angle Cuts in Tubing.** Try inserting tubing in a hole bored in a wood block so that you can guide the cut by a line drawn on the top flat surface of the block. Run the saw through the saw kerf in the wood if more similar cuts must be made in the same diameter tubing.—*Chas. H. Willey, Penacook, N. H.*

***Please turn the page for more shop tips.***

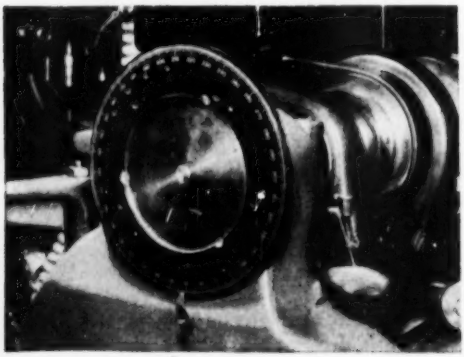
**Counterweight Balances Drill Table.** Why struggle to slide a heavy drill table up and down on its column, when a counterweight will lighten the job?

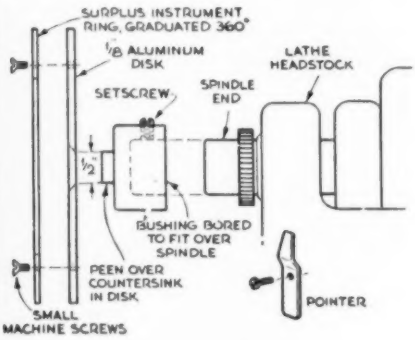
Link the counterweight to the table with a length of flexible stranded wire (heavy picture-hanging wire will do). Run the wire from the back of the table up over a pulley mounted on a maple bushing turned to fit into the top of the column, then down inside the column and through a hole in the bench to the weight. The weight should come within a few pounds of balancing the table. Support the pulley on an angle bent from heavy strap iron. An extra piece of strap riveted to the top of the angle adds thickness for the ¼"-bolt axle. *—Wm. S. Manchester, Ottawa, Ont.*



**Indexing Dial Fits on Lathe Spindle.** A graduated ring commonly found in surplus-instrument stores is the key part of the indexing dial below. It accurately divides any diameter into a maximum of 360 divisions.

Fit a disk cut from ⅛" aluminum to a bushing bored to fit over the back end of the spindle and fasten the ring to it with flathead machine screws, countersunk. Drill into the bushing for a setscrew to lock it on the spindle. Cut a small pointer from sheet metal and mount it on the lathe gear cover with one screw so it can be swiveled out of the way to remove the dial. *—Floyd McGuckin, Ridgewood, N. J.*





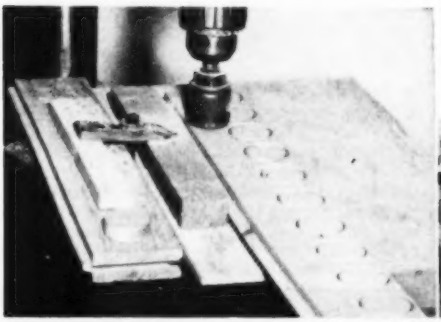
**Cylinder Head Makes Handy Shop Anvil.** A junked and otherwise useless auto-cylinder head can still see plenty of service in a workshop. The flat surfaces make a solid anvil for hammering or shaping metal. Spark-plug and stud holes serve for knocking out rivets, pins or bolts and the dished combustion chambers can be useful for beating sheet metal into concave shapes. Mount it on a stand near your bench vise.

## Plugs Cut from Board Face Mend Floor Defects

A DODGE I use to repair roller-skating rinks may prove handy to the homeowner. Some rink floors are maintained by boring out defects and driving in a piece of hardwood dowel. But such a repair tends to be conspicuous because the grains do not match and the end grain of the dowel swells more than the surrounding cross grain.

Plugs cut from the face of matching hardwood flooring are better on both counts. The photos show how to make quantities of them fast. The bad spot is bored out to slightly less than plug diameter and short of plug thickness. Glue is applied and the plug driven in, planed flush, sanded smooth.–*V. R. Day, Albany, Ore.*

**FLOOR DEFECTS are bored out with a bit to make a tight-fitting hole for the plug. Drive fit requires no nails. If a plug of similar grain is chosen and properly set in place the repair will be hard to spot.**

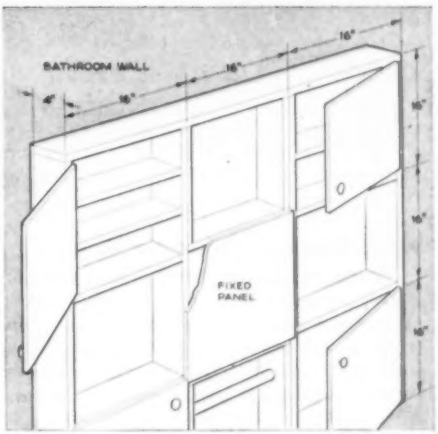


**HOLE SAW 1¼″ in diameter produces 1⅛″ plugs. Fence is clamped to drill-press table, depth stop set to let saw cut ½″ deep, and circles spaced ¼″ apart. This gives two rows of plugs from a 2¼″-wide piece of flooring.**

**TO CUT PLUGS FREE, the stock is run over the circular saw with the fence set to cut through at bottom of the hole-saw cut. With 31/32″ flooring stock, cut may be right through center of thickness. Plugs fall out at side.**

## Shelving Plus Cabinets Makes Decorative and Functional Wall

THE contents of an overcrowded medicine cabinet will never again tumble down on you if you finish one wall of your bathroom with this cabinet-and-shelf arrangement. The shelving is ¾″ stock with doors of ¼″ hardboard. Pictures and small ornaments can be used to decorate the shelves. A length of ¾″ dowel set in the center compartment keeps towels within easy reach.–*Hi Sibley, Nuevo, Calif.*



▶▶▶Stripping plastic insulation off solid wire will give you small-diameter tubing in a variety of colors for experimental purposes. Clamp one end of the wire in a vise and work the insulation off by hand.–*Carl Tretin, Austin, Minn.*

## TV Lead-In Hides in Wall

If you live in a one-story house, you can easily run your TV lead-in down through the wall behind the set. You'll probably shorten the lead-in too, improving reception. Drop a nail on a string from the attic through a hole in the wall framing. Catch the nail in a wire loop inserted in a hole in the baseboard (like threading a big-eyed needle). Tie the lead-in to the string and drag it down inside the wall and out through the baseboard. Trim wire to fit.—*M. Corn, Shrewsbury, N. J.*

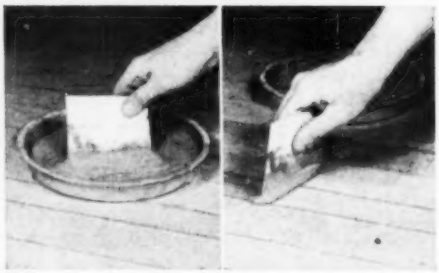
## Coffee-Can Lid Wipes Brush

A coffee can with half the lid cut away and rolled under provides a container with a smooth drip-proof edge for wiping excess paint from your brush.—*R. L. Ellis, Miami Beach, Fla.*

## High Pulleys Oiled by Rope

When pulleys on sky-reaching flagpoles begin squealing for lubrication, soak a foot of the halyard in oil and quickly raise it up on the pulley. Seesaw it briskly with the rope's oiled section in the pulley to throw the oil around and quiet the clamor.—*Edward Mayover, Philadelphia.*

## Plastic Spreader Makes Floor-Filling Easy

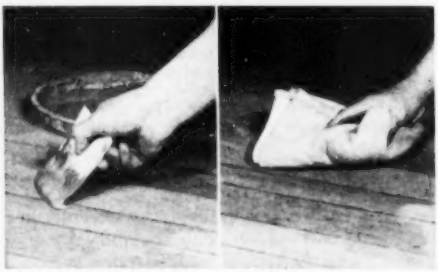


**1** **Spare your muscles** and do a better job next time you spread filler into a new or worn floor. The trick is in using a broad plastic joint knife or a square of stiff plastic instead of a brush or steel blade.

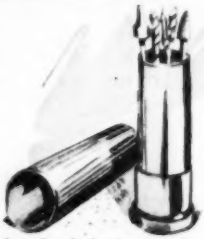
**2** **Dip plastic blade** in filler thinned to almost brushing consistency with 50-50 mix of half-boiled linseed oil and turpentine. Apply mix to floor with single strokes in direction of grain. This fills pores.

**3** **Pushing blade** back across the fresh filler scoops up any excess paste. This can be scraped off on the side of the container for further thinning and re-use. The return stroke also packs the wood grain.

**4** **Light rubbing** with a rough cloth 20 minutes after the filler is applied will remove all traces of surplus paste. Allow the filler to dry from 36 to 48 hours before finishing. — *Andrew Brennan, Philadelphia.*

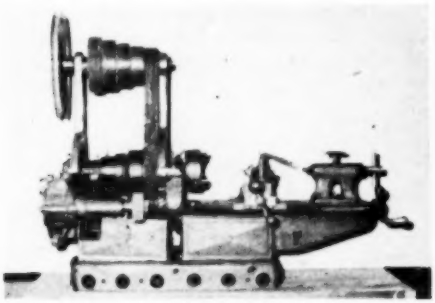


## Lipstick Tubes Make Bit Cases

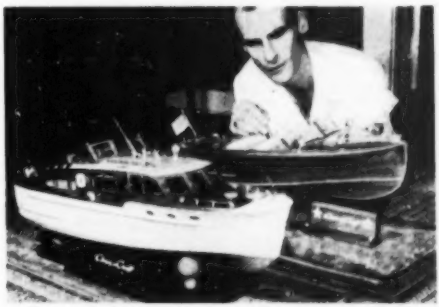


Those little metal tubes that your wife throws away when she's finished a lipstick make good cases for small drills and router bits. A piece of rubber sponge soaked with light oil and wedged in the bottom will ward off rust. Individual lathe tools can be protected in the same way.—*John W. Sherman, Mt. View, Calif.*

**An electric windshield-wiper motor** drives the rear wheels of this model—a two-foot version of a 1911 Maxwell. A line cord brings power from the battery of an automobile parked nearby. The model has a sliding-gear transmission with two forward and two reverse speeds, pre-selected by manual levers on the running board. A second motor controls the steering. Using remote-control switches, builder George Tobi Jr. of Jacksonville, Fla., can maneuver the model in a 16-foot circle.



**A Model T engine block** now has a second life as a lathe—16" between centers and with 4" chuck capacity. The handle at the front of the lower pulley can be moved sideways to throw out the back gears, made from Model T timing gears. A small emery wheel has been mounted on a bracket where the generator used to be. The spindle can be locked for direct drive. Francis Cooper, who lives in Portland, N. D., made the conversion.



**Dental drills and a flight computer** helped in building this pair of model power boats. Don Henry of Louisville, Ky., used the delicate drills to make detailed fittings—including air horns and spotlights and illuminated instrument panels with movable needles on the dials. The flight computer enabled him to figure dimensions from blueprints of the full-size originals. Electric motors drive the models up to five miles an hour.

## Gus Aids a Hot-Rod Jockey

[Continued from page 180]

There's nothing wrong with those mains. We put in new ones, top and bottom halves."

"Just curious, Sam," Gus said.

Gus loosened the four husky main bearings, being careful not to let the main shaft down so far that the gears of the timing gear would disengage from the main sprocket. He took the front main cap off entirely, punched out the top half of the bearing with a soft brass driver. He looked into the crankcase.

"Curiosity," Sanderson remarked dryly, "often kills more than cats."

Gus ignored the wisecrack, and went calmly ahead with the job. He tightened up on the mains, then reached out for a handful of cotter keys, inserted them in the mains. He slid out with the oil pan.

"The gasket," he said to Sanderson, "looks all right, wouldn't you say?"

"It's all right," Sanderson told him impatiently. "Put the pan on, and if you're through I'll get rolling. Being shorthanded has put us way behind."

Gus put the pan on and the oil in.

"You don't need to be shorthanded," he said. "Joel Howard needs a job."

### *Sanderson Plays It Safe*

"Joel Howard!" Sanderson growled. "I wouldn't rehire that . . ."

Sanderson cut himself short. He peered at Gus with wary eyes. But Gus walked away and sat on the bench.

"I reckon," he said placidly, "that you'll go far to get a better man."

"You're crazy, Gus!" Sanderson yelled. "Three rods in less than a week. I'd be a durn fool . . ."

"I'm not buying you any coffee, Sam," Gus told him. "Not today."

Sanderson's face was a picture of perplexity. He wanted to know just what Gus had found, but he didn't dare ask. He got the sudden and sure feeling that the best thing he could do was to drive out of the Model Garage and go ask Joel Howard to come back to work. He'd best drive out and forget that he ever came in, as he knew that if Gus had found anything amiss while under the truck, the town would never know about it—not if Joel Howard was back to work.

"Maybe you're right," Sanderson said, as he climbed in and drove out.

"You aren't the only one around here that's curious, Gus," said Stan Hicks, who had kept an eye on the proceedings, in between trips to the pumps. "Did you find something, or were you just tossing a bluff?"

### *Stan Gets the Story Straight*

"No bluff," Gus told him. "I ran into the same deal once before. The oil lead from the pump to the main shaft on that truck comes down through the block into the top half of the front main. When I heard that Sanderson had put in new mains, and that rods five and six were going out, I got suspicious.

"The oil hole in the top half of the front main on this model truck is slightly off-center, front to rear, and it's easy to put in the case backward. When this is done, the oil hole in the bearing meets the oil holes in the block and main shaft less than halfway. You got oil pressure, but you got it in the wrong place. The oil flow to the shaft is cut down so much that although the forward rods get by, the back rods starve on a heavy pull.

"All I did was to turn the top half of the front main. The way it was, Sam would have burned out a rod himself."

"Then it wasn't Joel's fault at all!" Stan said.

"And the best part of it was that Sam knew it when he left here. He'll puzzle it out for himself after awhile."

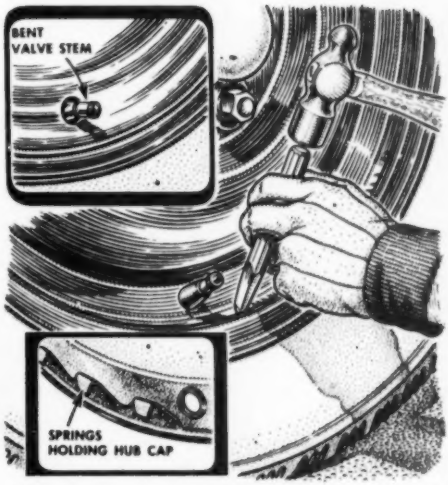
"And," Stan said angrily, "Silas Barnstable was around here tearing Joel down. He'd like to see Joel stay fired."

"Oh, I wouldn't say that, Stan," Gus grinned. "Who do you think took my tip, and went up to prod Sanderson into coming down here? Silas really wanted Joel to get a break."

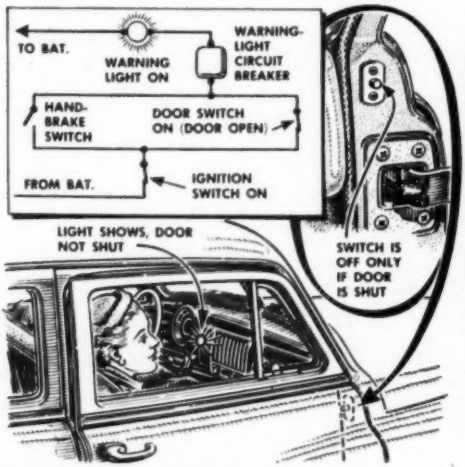
"Just for that," Stan vowed, "I'll go out and put air in his tires every day for a week, and smile." END

# Hints FROM THE MODEL GARAGE

**Tuck spare fuses** into a clip made from short lengths of windshield-wiper hose for quick replacement as needed. A notched wood block screwed to the inside of the glove-compartment door holds the hose.



**Raise a series of burrs** around your wheel rims to keep the hub caps or wheel rings from creeping and distorting the valve stems. Chisel the burrs along the marks made by the spring tabs inside the hub caps.

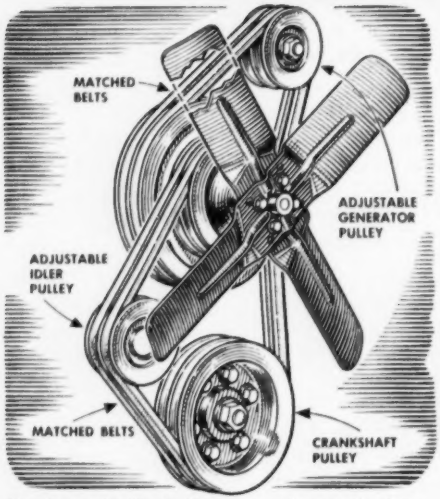


**Mount a normally closed switch** on the right-hand door to warn you when it's partly unlatched. Wire it through the ignition switch to the hand-brake warning light or a separate bulb on the dash so that you'll know the door is shut before you start.

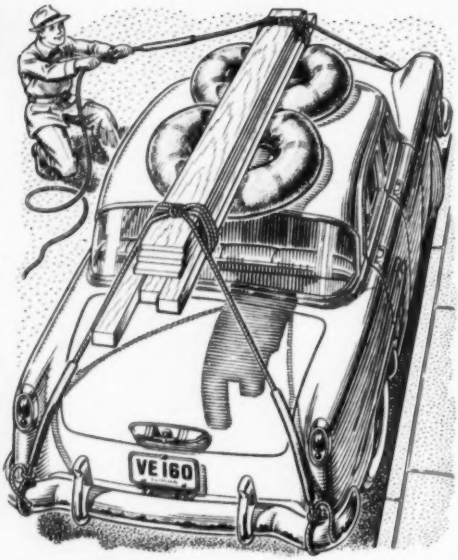
**Join two pieces of inner tube** with a leather strap to make a pair of sleeves that will protect your arms from dirt or a hot manifold when reaching in or around the lower parts of a motor. Use the sleeves for protection against sparks when welding.

***Please turn the page for more auto hints.***

## *MORE* Hints from the Model Garage



**Replace both belts** on a dual-belt drive, even though only one is worn. Slight differences in lengths of belts bearing identical numbers can make one belt do more than its share of work. Matched belts are packed in sets to be used together.



**Long boards** or other objects too long for the inside of a car can be hauled on the roof, using inflated inner tubes as cushions. Tie the load to the bumper ends to keep it from pivoting, and slip lengths of hose over ropes to protect car finish.

**Use a toothbrush** to remove the dried and whitened polish from body seams or behind chrome trim. The same brush can be used to *put* wax in these places as a precaution against body rust or to clean dust from the instrument panel and radio grille.

**Caught with a flat at night** and no trouble light, you can reflect enough light from the headlights to see what you're doing. A road map or newspaper, partly folded down the center and held or propped in front of the car, will do the trick.

# NOW! PUSH-BUTTON POWER!

# B-C Flash makes sure he gets the picture

B-C stands for battery-condenser. You know what a battery is, of course. *But why the condenser?*

First, let's assume that most of your flash pictures have come out great. But perhaps occasionally a few were *under-exposed* (or didn't come out at all). A weak battery most likely was the cause. It was just weak enough to fire the lamp a fraction late (or not at all, after a few shots had momentarily drained it).

Now—to avoid such possible waste of bulbs and pictures, a *condenser* is substituted for one of the batteries. With this dependable Battery-Condenser system the battery itself doesn't fire the lamp. What the battery does is to feed power to the condenser. The condenser stores the power . . . always a *full charge* of power . . . and it is the condenser that fires the lamp at just the right instant.

**The battery can even become weak: yet you'll get your flash picture.** Because the power stored in the condenser does the firing, the battery can be used for a much longer time. B-C is extra-dependable, extra-economical flash. It's a system you'll want to own, whether you've taken flash pictures before or are just about to start.

On the opposite page you see the latest Kodak B-C flash equipment. Your dealer will be glad to demonstrate the advantages of B-C. Be sure to see him soon. Make him headquarters for all your photo needs.

# NOW . . . an economical Kodak B-C Flasholder—$9.95

**You get all these advantages . . . in a dependable B-C unit that fits most cameras with built-in flash shutters:**

**50% more light**—New Lumaclad reflector allows you to stand back further, get more subject in picture.

**Sturdy hand grip**—Popular press-type, easy to grasp. Adjustable bracket quickly attached (or removed for off-camera shots).

**Special lighting easy**—Flasholder has connector for multiple lighting with one or two Extension Units (see below).

**Cheap operation**—Uses low-cost midget lamps in standard sizes: SM, SF, Nos. 5, 5B, 25, and 25B.

**Easy-to-use lamp ejector**—Simply press release, lamp pops out.

**Handy exposure guide**—On back of reflector, right before your eyes.

**2-Way Flashguard included**—Slips over reflector, gives either normal or "soft" light.

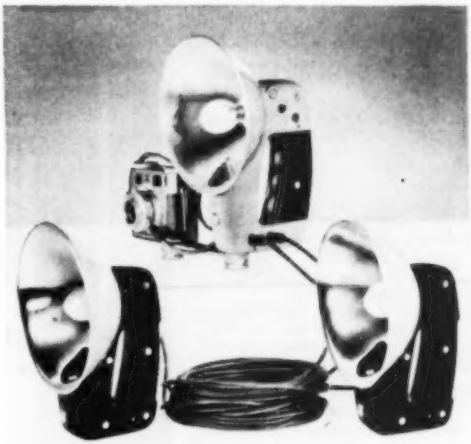
**Special adapters available**—For attaching Flasholder's ASA-bayonet connection to other type flash connectors.

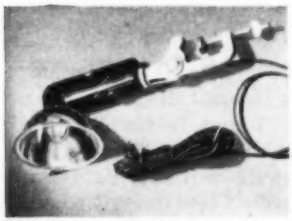
Flasholder also available in Standard model without B-C. Uses "C" batteries; accepts B-C Flashpack (see below). $7.95.

## For super-versatility with Kodak B-C Flash

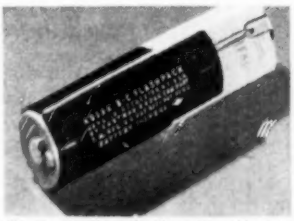
*The Kodak Ektalux Flasholder* fits most press-type and roll-film cameras. Here it's shown at right with 2 extension units—used for special lighting effects (takes up to 6 units).

The Ektalux gives you many exclusive features: quick loading and ejecting for both midget and medium-base lamps . . . two-way focus of midget lamps for uniform or concentrated light . . . convenient exposure guide . . . comfortable pistol grip. You can trip camera shutter from the Flasholder—or convert non-flash shutters. The Ektalux (with magnesium die-cast body) is durable but light; easy to pack (reflector removable). Flasholder with standard bracket, $29.75.





**Take large-area pictures**—Kodak Flasholder Extension Unit, complete with Lumaclad reflector and 20-foot cord, gives extra light to cover large areas. **$11.00.**



**Convert other flash units**—Kodak B-C Flashpack replaces two "C" batteries (end-to-end type), converting to dependable battery-condenser power. **$2.95.**

**Flash shots with simple cameras**—Kodalite Flasholder for Brownie Hawkeye Camera has Lumaclad reflector. **$4.00.** Your dealer has other inexpensive Flasholders, too.

*Prices subject to change without notice*

### How the Missing Link Was Found

[Continued from page 176]

and part of 1938, the doctor continued to visit the fossil gold mine, for that is what it proved to be.

As Broom arrived one fine June morning in 1938, Barlow showed him the palate of a large ape-man, with one molar in place.

Trying not to betray his excitement, Broom said with restrained understatement: "That is a nice specimen. I'll give you a couple of pounds for it."

Barlow was pleased, but evasive about telling where the palate had come from. The matrix was different from that of Sterkfontein, and the doctor felt sure it had been collected from some other site. He questioned the quarry boys; they had not seen it before. Broom dropped finesse. He told Barlow he had to know the source of the fossil; two of the teeth were freshly broken off and perhaps could be recovered. Barlow then held back no further. He explained that he had obtained the palate from a schoolboy, Gert Terblanche.

#### *Bone Pieces Were Scattered About*

The words were scarcely uttered before Broom started for the Terblanche farm. Gert, a 15-year-old, was at school, but his mother and sister were at home. The sister led the anxious doctor to a place on a hill where Gert had hammered the palate out of a deposit of bone breccia. Lying around were fragments of bone and a few teeth.

Broom hurried off for the school, walking the last mile because the road was too rough for his car.

#### *Boy's Pocket Is Cache of Four Teeth*

At the doctor's questions, Gert pulled out of his pocket "four of the most beautiful teeth ever found in the world's history." Two of the four fitted on the palate; they were the two that had been recently broken off. The other two had weathered off at some earlier time. The doctor bought the teeth from the boy.

Gert said he had another piece of the

### How the Missing Link Was Found

[*Continued from page 260*]

skull hidden away. The problem was to get him out of school and to his hiding place before dark might halt any necessary investigations.

Broom suggested to the principal that he be allowed to talk to the teachers and the children about their caves and how bones got into them. For more than an hour he lectured to them, illustrating his points with the clever blackboard sketches he often made at the museum. The principal was so pleased that he dismissed the whole school well before the closing hour at two in the afternoon. The boy and the doctor rushed off. When they reached the hill, Gert dug into his cache and drew out "a fine jaw with some beautiful teeth."

#### *Assembled Pieces Were a Surprise*

During the next few days the two sifted all the ground around the spot where the skull had been embedded and recovered a number of scraps of bone and tooth. When all the pieces were cleaned and joined, Broom again had a wonderful surprise. He had the greater part of the left side of a skull and the lower right jaw with many of the teeth well preserved.

The skull differed in some important respects from that found at Sterkfontein. The face was flatter, the jaw more powerful and the teeth larger. In this way it was more apelike. In other ways, particularly in the form of the teeth, it was more human. Some people began to be convinced. The *London Illustrated News* captioned its picture: "The Missing Link No Longer Missing."

The war stopped the work in the caves. Soon after the end of the war, General Smuts sent for Broom. The general offered the doctor government support and whatever money might be needed for further explorations.

On April 18, 1947, at Sterkfontein, the doctor and his assistants blasted out a large piece of what looked like unpromising breccia. As the smoke blew

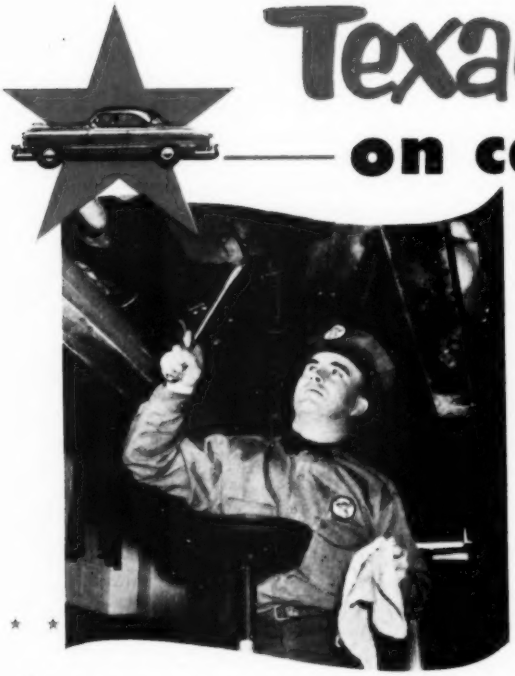
# Texaco Tips on car care



## How to get good automatic transmission performance

If the level of your automatic transmission fluid is below normal, you can't enjoy smooth, efficient motoring . . . and you may run into expensive repairs. See your Texaco Dealer for Texamatic Service. He has taken a special course in automatic transmission care. He will check the fluid level. If it is low, he will add the precise amount necessary. At the mileage specified by your car manufacturer, your Texaco Dealer will drain and refill your automatic transmission with Texaco Texamatic Fluid as required.

## How to get longer engine life

Today's best motor oil is *made* . . . not born. Nature's finest oil failed to meet the tough requirements of today's high-horsepower engines. That's why Texaco engineers developed *Advanced Custom-Made Havoline*. Its Balanced-Additive formula gives your engine the all-around protection against wear that it needs. The results of rugged tests show that tappet "A" was "dished-out" after 100 hours of operation with a good heavy duty oil. Using *Advanced Custom-Made Havoline* for 500 hours, tappet "B" showed *no sign of wear*. Get *Advanced Custom-Made Havoline*—the great motor oil that protects against rust, keeps your engine clean, free from sludge and metal-eating acids . . . actually wear-proofs your engine for the life of your car. See your Texaco Dealer . . . *the best friend your car has ever had.*

### How the Missing Link Was Found

[*Continued from page 262*]

away, they saw a sight almost unbelievable to an anthropologist. A whole, a perfect skull was exposed, standing out like an ivory inlay in the darker rock.

The blast had split it in two—an immaterial matter. The base of the skull was in the block that had broken away. The upper half was exposed in the wall. Small lime crystals had formed in the brain case, which sparkled as though it were lined with diamonds. "I have seen many interesting sights in my long life," the doctor said. "This was the most thrilling of my experience."

#### *Mrs. Ples Was No Beauty*

The skull was that of an adult female *Plesianthropus*. Around the museum she promptly became known as Mrs. Ples. Mrs. Ples would scarcely have been considered a beauty by modern standards. Her jaw was heavy and underslung, her nose flat. And yet there was about her an unmistakable quality of humanness.

Mrs. Ples and her contemporaries were beings not yet fully human; they were the links, the long-denied and long-sought transitions between the anthropoids and men. They were the hitherto missing proof of the unbroken descent of life at one of the critical stages of evolution, the jump from anthropoid to hominid—to the human race.

Even before Broom died, on April 6, 1951, at 84, scientific appraisal of his work was making certain of his recognition as the man who discovered the immediate origin of man and mammals.

Another conviction was also growing. The impressive South African ape-man fossils pointed directly to the possibility that man originated in Africa. END

---

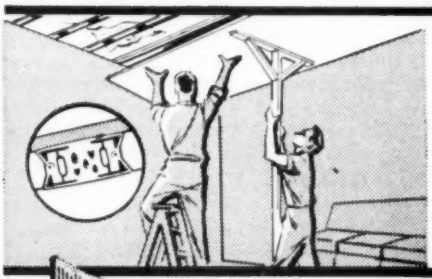
### On Solid Ground

A MOUNTAINEER, on his first visit to a city of any size, was fascinated by the asphalt streets. Scraping his feet on the hard surface, he remarked to his boy, "Well, I can't blame 'em for building a town here. The ground's too darned hard to plow, anyhow."—*L & N Magazine.*

- CEILINGS CRACKED?
- NEED MORE ROOM?
- BUILDING A GARAGE?

# *Use* UPSON PANELS

## *do it yourself, save money, get better finished job!*



### Recover cracked ceilings in a day

**Upson Kuver-Krak Ceilings.** Apply Upson Ceilings on furring strips right over your old cracked plaster ceilings. They stay anchored from the back with ingenious Upson Floating Fasteners. (See insert). There are no visible nailholes. In just a matter of hours the job is finished. No dirt, no mess. And you have a beautiful, *permanent* and crackproof ceiling. See your lumber dealer. Insist on Upson.

### Add beauty to extra room with Striated Panels

**Upson Striated Panels.** Panel-finish your attic or basement with Upson Panels. And, to add a beautiful modern touch, finish one wall with smart Upson Striated Panels. A contrasting wall adds a professional decorator touch to your room. There's nothing tricky about Upson Striated Panels, either. They're easy to apply, won't crack, shatter, splinter. Take paint beautifully, withstand extra hard jolts. See your lumber dealer.

### It's easy to build your own garage

**New Upson All Weather Sheathing.** Costs surprisingly little. And the superior weather resistant qualities of this super-strong 6-ply Sheathing make it perfect for siding. Cover a garage, utility shed, in no time. Easy to apply, nail direct to studs. No paint required or one coat covers beautifully. Offers good insulation value. See your lumber dealer. Insist on Upson All Weather Sheathing.

# Starrett *Satin Chrome** MICROMETERS

**with FRICTION THIMBLE***

**plus DIRECT FEEL**

***PIONEERED and DEVELOPED by The L. S. STARRETT COMPANY**

**Starrett *Friction Thimble Micrometers* give you both *friction control* and *direct feel* in a micrometer designed for easy, one-hand use. An improved friction control mechanism built right into the upper portion of the thimble is "right under your thumb" for fast, accurate, repetitive measurements. Lower section of the thimble is integral with the spindle with location and large diameter just right for quick control and "direct feel" on critical measurements.**

**Only Starrett Micrometers offer you this modern convenience plus 12 other big features. Get them all by insisting on *STARRETT* Micrometers. Buy through your Industrial Distributor.**

### New Types of Wood Flooring

[*Continued from page 244*]

and durability. Higher grades often include somewhat more long pieces.

Lower grades not only are cheaper but are actually preferred by some people because of the interest and character given to a floor by natural defects. Another way to save money is to buy the very cheapest grade and then cut out serious defects.

Starting in each case with the finest—and most costly—variety, the grades of quarter-sawed oak are clear, sap clear, and select. Of plain-sawed oak, the grades are clear select, No. 1 common and No. 2 common.

Beech, birch and maple are graded first, second, third. So is pecan, which is also made fourth grade.

In prefinished oak flooring, grades are prime, standard and better, standard, tavern. Prefinished beech and pecan are offered in one grade, tavern and better.

***What thickness?*** Many special floorings are offered in only a single thickness, but the standard varieties in widest use often come in a choice of several. Thinner flooring is naturally cheaper. And it will do as well if applied over an old floor or a thoroughly sound subfloor.

If the subfloor is doubtful, it is wisest to use one of the thicker types, usually about 25/32". If your floor is to be put down over screeds (sleepers) on concrete or directly onto joists without any subfloor, use flooring at least 25/32" thick.

One last pointer: have your flooring delivered well before you're ready to lay it. You'll get a smoother, tighter floor if you keep the material for four or five days in the house where it is to be used. Stack it loosely in a room heated to about 70° so that its moisture content can become the same as that of the house. Don't store it or lay it in a damp house.

A good floor can be a lifetime proposition. It's well worth your while to select it carefully and treat it right. END

---

### Big Wind

"Quite a blow last night, wasn't it, Elmer?" a farmer remarked to his neighbor.

"Yep, shore was," replied Elmer.

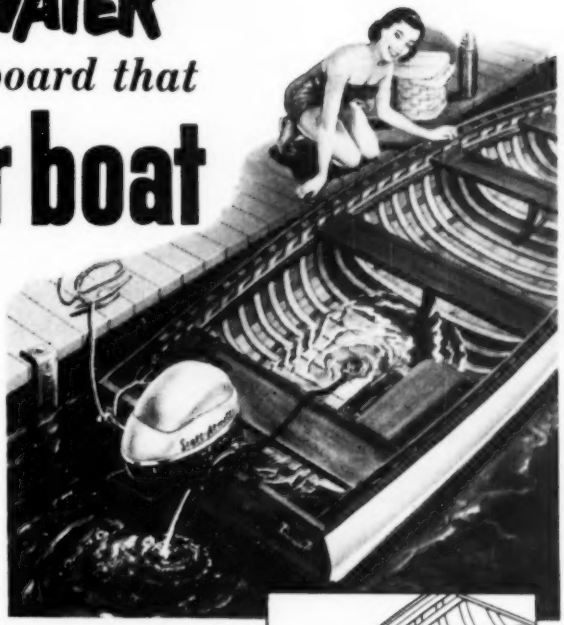
"Damage your barn any?" questioned the first man.

"Dunno," replied Elmer. "Hain't found it yet."—*C & O Tracks.*

# SCOTT-ATWATER

*gives you the outboard that*

# bails your boat



Here's the most talked-about outboard improvement in years! The new Scott-Atwater with *Bail-a-matic* pumps your boat dry, keeps it dry . . . automatically!

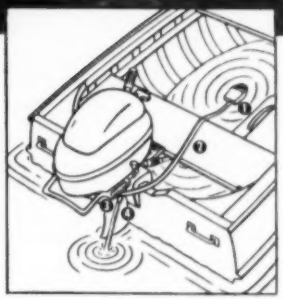
And *Bail-a-matic* is just one of the exciting features of the 1954 Scott-Atwater line: *Aquablade* Lower Unit, a great new development in outboard engineering; *Pillowed Power* for quieter, smoother cruising; *Stowaway* Gas Tank; *Complete* Shift (forward, neutral, reverse); *Twist-Grip* Speed Control; Carburetor Drain; Remote Control Connections and many others.

*Horsepower Certified by OBC. F.O.B. factory prices subject to change without notice.*

**HERE'S HOW BAIL-A-MATIC WORKS**

Water is drawn into screened immersion unit (**1**), and flows through neoprene bilge hose (**2**) to vacuum-type *Bail-a-matic* pump (**3**). The water *does not* circulate through the cooling system; it is immediately expelled (**4**) via completely separate outlet.

The *Bail-a-matic* unit works at any motor speed, in or out of gear . . . bails more than 150 gallons per hour.



**FREE 16-PAGE BOOKLET** tells the whole story of the sensational Scott-Atwater for 1954. For your free copy, write Scott-Atwater Mfg. Co., Inc., Minneapolis 13, Minn., Dept. PS-24.

Meanwhile, see *Bail-a-matic* in action at your nearest dealer's. Look for his name in the phone book classified section.

**FOUR NEW MODELS WITH**

**Bail-a-matic**

| 5 HP | 7½ HP | 10 HP | 16 HP |
|---|---|---|---|
| $209.50 | $229.50 | $279.50 | $339.50 |

Also, 3.6 HP super single, a powerful, dependable lightweight, and a great value. Only $109.50.

# SCOTT-ATWATER

*The first outboard in history that*

# bails your boat

SCOTT-ATWATER MFG. CO., INC., MINNEAPOLIS 13, MINN.

**This oil-pumper needs Tough-but-oh-so-Gentle Piston Rings**

Oil pumping is just the start of expense and trouble—the first danger signal from worn-out piston rings. The longer you let those rings stay in, the more oil you use, the more power you lose, and the bigger your repair bill.

As your engine gets older, it runs hotter because of accumulations in the cooling system. Cylinders wear tapered and out-of-round—need more oil on the walls.

It requires a special type of piston rings—replacement rings—to deliver this extra oil, under full control, without waste. Hastings makes replacement rings exclusively, devotes all its research on the highways and in the laboratory, to the particular replacement problems of each make and type of engine.

That's why Hastings Rings *stop* oil-pumping, *check* cylinder wear, *restore* engine performance—in re-ring, re-bore and re-sleeve installations.

So go to your motor specialist at the first sign of oil-pumping or performance drop-off. If rings are the trouble, ask him to install a Hastings Steel-Vent replacement set. Truly the best money you can spend on your car! Hastings Manufacturing Company, Hastings, Michigan; Hastings Ltd., Toronto; Piston Rings, Spark Plugs, Oil Filters, Casite, Drout.

**TOUGH-but-oh-so-GENTLE**

**TOUGH on oil-pumping**

**HASTINGS** STEEL-VENT PISTON RINGS *Regular or Chrome Faced*

**The New Ford Engine**

[Continued from page 141]

how sweetly it comes, how long the engine will work for you.

***No droop.*** The solid, chunky look can be deceptive. Some engines sag as much as a sixteenth of an inch on their mounts from weight alone, and deflection is greater under combustion pressures and torque loads. This pliability—which often occurs chiefly in the block-to-bell-housing joint—is murder on smoothness and engine life, and is quite as much a design flaw as an engine that's fat with iron.

Ford people are proud of their OHV block. Ticking off its virtues, they cite a husky box structure with a big array of internal stiffening webs. The crank is brought up inside, giving much greater support for the five main bearings. Where the block bolts to the bell housing, attachment points are much lower and wider than before, to prevent that regrettable sag. Engine mounting positions are also rearranged: the front mounts are farther back, and there's a new "steady rest" in front.

The old crank had three main bearings, weighed 65 pounds, and in recent years coped with more power than it was designed for. Although the new one is 16 pounds lighter—an important saving on a rotating part—it also manages to be notably stiffer. This hat trick is not just because of the two extra mains, though they help. It is another benefit of the shorter stroke, which allows a ⅜-inch greater overlap between the main journals and the crankpins.

***Valve train.*** There are no hydraulic lifters in this engine. Oddly enough, there is almost no clicking, hot or cold. Ford says that the answer is partly mathematics and partly metallurgy. An electronic-computer program helped work out new cam ramps with just the right shape to get along civilly with their tappets. Expansion coefficients of various alloys were neatly paired so that the system wouldn't go off beam with temperature changes. The word is that a properly set-up engine will stay quiet

[Continued from page 268]

for about 15,000 miles, by which time enough slack will have accumulated to let her click. Resetting the clearances then, a simple service job, will silence her for at least that mileage again.

Ford has gone from a gear drive for the camshaft to a chain, using a husky one that is a full inch wide—bigger than a Cadillac's. Both intake and exhaust valves have free-turning rotators. Also new is a clever little valve-stem seal—first worked out for the six—that licks a mean problem in valve-stem lubrication (too much oil on the stem dribbles down into the combustion chamber, giving smoke and a bad reputation; too little means wear). The seal is a little synthetic-rubber umbrella on the stem, inside the spring, that jogs up and down with the valve. The umbrella lets enough oil mist reach the stem to oil it properly but deflects solid drops.

To old hands who have fitted replacement valve-stem guides in many an overhaul, one part of the new engine may be a shocker—there aren't any valve guides. The valve just rides in the cast-iron head.

***Cools valves.*** If you raise an eyebrow, Ford engineers climb all over any theory that this is corner-cutting. By dispensing with the extra joint where a separate guide would be pressed in, one heat-flow barrier has been eliminated, cutting exhaust-valve temperatures by as much as 160°. Old bushings not only gave hotter valves but they tended to wear fast, usually growing bell-mouthed at the unsupported end. Cast-iron guides hold size much longer, and can of course be reamed oversize and fitted with larger valves if an engine has a hard life.

If the eyebrow is still up, Ford engineers deliver the clincher: the integral guide has done elegantly on the six, on truck engines, and on the Lincoln.

***Will it last?*** You can never be sure with a new engine—an owner is the ultimate test driver. But the OHV job doesn't look to be a sensitive plant. For one thing, it leans on experience with the

# Amazing A-MP TOOL for Making ELECTRICAL CONNECTIONS

**TERMINALS, CONNECTORS AND INSULATORS INCLUDED WITH KIT**

**CRIMPS Terminals on wire.** In one easy operation the tool crimps Terminals and Connectors for safe connections.

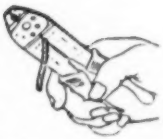
**SPLICES WIRE**
Prepares wire for crimping Connector, making quick, firm splice.

***You and every home craftsman as well as every professional need this wonder tool because it simplifies, improves and speeds up the job of making solderless electrical connections.***

Ends the old way of forming electrical wiring connections, cutting, splicing or stripping wire. With this A-MP Tool you can make all wiring work a "professional-like" job. Terminals, furnished with the tool, are crimped onto the wire then neatly fitted to the terminal stud. Splicing and making a fresh wire connection are easy with the A-MP Tool. You simply insert the exposed wire ends in the connector barrel, furnished with kit, then crimp both ends and cover the connectors with the insulating tubing—result, a perefct job in minutes. And stripping wire is a joy with the A-MP Tool. Just a clean cut through old insulation, then a quick jerk and the wire is stripped clean and ready for Terminals or Connectors.

formerly $5.00
NOW $3.95
COMPLETE KIT POST PAID

**CUTS WIRE**
Makes a sharp, clean bite through wire and insulation leaving no loose, straggly strands of wire or insulation.



**STRIPS WIRE**
Cuts through insulation and when loose fabric is pulled off leaves strands clean and tight and of proper length for crimping.

**THOUSANDS A-MP TOOLS IN USE**

The electronic industry, electricians, garage and service station mechanics, are all enthusiastic users of CHAMP A-MP Tool because it gives the professional touch to all electrical connections. If you are a professional mechanic you will welcome it as a valuable addition to your tool kit. If you are a home craftsman you will want it for all the electrical work around your home or shop. It is made of high quality tool steel and has plastic covered handles.

**SHEARS BOLTS, TOO**

The Champ A-MP tool shears bolts — either steel or brass without damage to the threads, and leaves no burrs to file. This is an added feature.

**ORDER DIRECT FROM THIS AD**

If your dealer hasn't the Champ A-MP Tool you can order it direct. Satisfaction guaranteed or your money back. Mail coupon, enclosing check or money order for $3.95. Tool is sent postpaid. Extra supply of Terminals, Connectors and Insulators always available.

### The New Ford Engine

[*Continued from page 270*]

Lincoln and the six. For another, the company has spent 125,000 man-hours on design, 50,000 hours on dynamometers.

For a third reason, the new engine has done theatrically well on destruction tests. If you run her wide open on a dynamometer, delivering high power above maximum rated speed, *and with the spark set for continuous heavy knock,* she'll scream for around 200 hours before something lets go. (Typically, a piston gets holed.) This is three to four times as long as some perfectly satisfactory engines will take similar abuse.

***Complaint dept.*** In one respect the new engine won't please owners who are Saturday-morning mechanics: it is a dog to work on. The plugs are tucked horizontally under the exhaust manifolds. You can only change the oil-filter cartridge from underneath. The distributor, slanting up out of the valley at the back of the block, isn't as insanely inaccessible as it was in the pre-'49 V-8s. But it still isn't nearly as handy as in the '49-'53 engines, for a pair of heater hoses run smack over it. The generator is tucked away under the right cylinder bank.

Ford already has its guard up against criticism on accessibility. An overhead-valve V-8 doesn't naturally stick a plug out at you like a tongue at the doctor. Water-pump and block considerations dictated location of the distributor. The generator now has prelubricated bearings at both ends, on the sound theory that an oil cup would often be overlooked in the new spot. As for the underneath oil filter, Ford asks, with a shade of testiness, who's going to change a filter cartridge without getting underneath to drain the oil anyhow? END

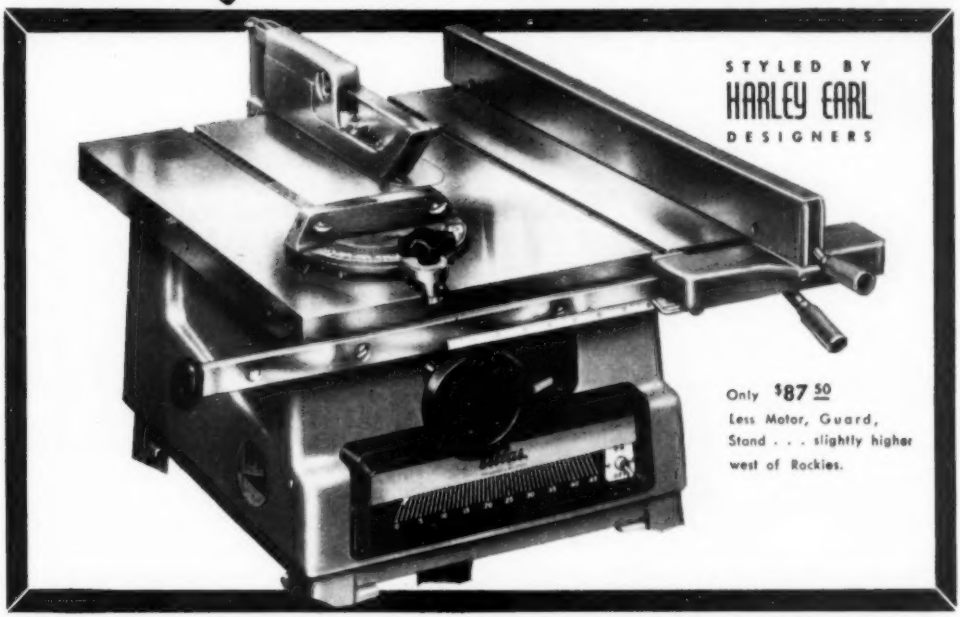
---

### Rays of Hope

In the waiting line at a mobile tuberculosis X-ray unit in downtown Dallas recently, an attendant asked a woman whether she wanted her chest X-rayed.

"Yes, sir," the woman told him. "I've had it done five times already and it sure is helping." —*T & P Topics.*

# Presenting America's NEWEST and FINEST



## The Great New *Atlas* 3021 8" TILT/ARBOR, BALL BEARING CIRCULAR SAW

Here's a brand new saw that'll do everything you've ever expected of an 8" circular . . . FASTER, SMOOTHER, EASIER and MORE ACCURATELY than you'd have believed possible. It's designed for efficiency . . . engineered to exacting standards for smoothest operation and long service . . . built for rigidity and styled along the most modern structural lines. Never before such value . . . STUDY THESE FEATURES.

**NEW** MODERN STRUCTURAL DESIGN . . . for accurate work.

**NEW** PUSH-PULL DUAL CONTROL . . . one handwheel for blade height, angle.

**NEW** LARGER ARBOR AND SEALED-FOR-LIFE BEARINGS.

**NEW** FAMOUS ATLAS DOUBLE-LOCKING, LIFT-OFF FENCE.

**NEW** DUAL V-BELT DRIVE . . . full power for every job.

**NEW** GRIP-FORM MITER GAUGE . . . greatest working ease and accuracy.

**NEW** BIG, EASY-TO-READ TILT GAUGE . . . accurate settings in seconds.

**NEW** STRUCTURAL DESIGN MECHANISM . . . greater rigidity, accuracy, ease of operation.

**NEW** CLEAR-VISION SAFETY GUARD . . . with tough transparent Tenite. Optional.

**NEW** PYRAMID DESIGN STAND . . . extra rigid, scientifically balanced. Optional.

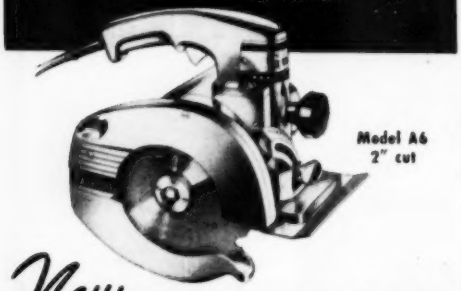
# Prevents Kick-Back!



## New PORTER-CABLE 6" SAW

**with exclusive Kick-Proof Clutch**

**Only $65.00**

When the ordinary electric hand saw hits a knot or hard spot . . . *watch out!* It may kick like a mule . . . even throw itself backward out of the cut. There's always the possibility that you'll be caught unawares — the saw damaged — or the work ruined.

*But not with the new Porter-Cable Kick-Proof Saws!* The special Kick-Proof Clutch absorbs all kick back . . . gives you greater protection . . . prevents motor burn-out and stripped gears . . . eliminates gouging of lumber from loss of control.

**MORE ADVANCED FEATURES**

Model A6 wraps up in one saw all the latest improvements in advanced design. Calibrated quadrant assures accurate bevel cuts. Helical gearing delivers more cutting power to the blade. Depth of cut adjustment is instantaneous. Precision ball bearings throughout. Sturdy aluminum base and frame keeps weight down to a mere 12 pounds for easier, less tiring sawing.

### Buick Adds Power

[Continued from page 149]

The looks of the new Buick are how you find them. The windshields are wrapped around like those of the new Olds and Cadillac. The swing-out hinges on the doors are mounted forward, and the door itself has an L-shaped notch in it, as though an elephant with pie-shaped dentures had taken a sample.

Me, within 10 minutes I was hopelessly gone on a Super hardtop, its rear whitewalls exposed delicately like a woman's ears under an upswept hairdo.

#### *Body Lines Are Smoother*

The fact is, in my opinion the new Buicks are mighty pretty. Bodies and rear fenders have been sleeked down.

All the Buicks are lower, some of them by as much as three inches. The hardtops excepted, the roofs of the Supers and Roadmasters extend beyond the tops of the windshields to make short sun visors.

Hoods are lower, too. At the cowl, the Special (and Century is the same) measures a full three inches lower to the ground. The Super's and Roadmaster's hoods are down an inch and a half. The front fenders are up, all of them by three inches, and you can see that right front crown from the driver's seat.

You no longer have to guess whether you're going to clip the guy you cut out to pass on the open road.

Hoods aren't any shorter, though. Shorter engines have created at least a foot of air space between radiators and grilles, but manufacturers still figure that they have to make a big man out of the motorist by giving him a long hood.

The new Buick speedometer replaces the familiar needle indicator with a creeping red line on an instrument face graduated horizontally. As the speed increases, the red line moves like the one in a spirit thermometer.

For 1954, Buick retains one of its oldest features. The company remains one of two in the U. S. (Nash Ambassador is the other) using a torque-tube drive. That means it sheathes the propeller

[*Continued from page 274*]

shaft in a steel cylinder attached on one end to the rear-axle casing and at the other to the transmission case. The more popular Hotchkiss drive is a naked prop shaft.

Every year, critics of the torque tube expect Buick to abandon it. Every year, Buick fools them. Ivan Wiles, general manager of this GM division, and his engineers have created a reasonable explanation for hanging on to a drive that costs them more to produce.

The Hotchkiss drive transmits torque to the differential and rear axle. That becomes push at the rear wheels. All the push transmitted to the chassis and body goes through the rear springs.

### *Prop-Shaft Cylinder Acts as Lever*

The springs have another function: when the accelerator goes down, the rear-axle casing tries to turn backward, in a direction opposite to the rotation of the axle itself. It's restrained mostly by the rear springs.

The torque-tube drive does it differently. When the rear wheels start turning, the push on the chassis comes through the transmission housing. It gets there by traveling along the cylinder that sheathes the prop shaft. Moreover, this cylinder acts as a king-size lever on the rear-axle housing to keep it from turning when a motorist steps on the gas.

In braking, the snubbing action on the rear wheels puts reverse English on the whole process.

### *New Springing Is Softer*

According to General Manager Wiles and his crew, the real payoff on the torque tube is the latitude it affords the engineers in springing a car. All that the springs have to do is hold up what's above the running gear. Springs can be softer. That's the reason for coils all around on a Buick.

The company says a torque-tube car keeps its direction better, too. When the push from the rear wheels is applied

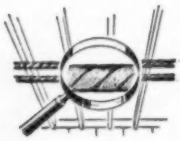
# TIPS for the HANDYMAN

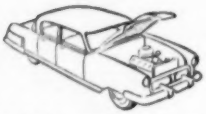
## ON USING L·O·F SUPER-FINE FIBER-GLASS

Here's a new insulating product of "1001 uses." Wonderfully easy to handle and apply. And so versatile, so effective, you'll find uses for it in a dozen places 'round the house.

Save fuel by wrapping fire-resistant Super-Fine around your heating ducts! Highly efficient *heat* insulation. Flexible, lightweight, easy to install.



Reduce dripping from *cold* water pipes. Reduce heat loss from *hot* water pipes. Spiral wrap them with Super-Fine. Will not mildew or rot.



L·O·F Super-Fine installed under the hood of your car reduces airborne noise, tire whine and air-stream whistle.

Sound-insulate your home workshop! L·O·F Super-Fine provides excellent *sound* absorption. Cuts easily with scissors or knife.

Get L·O·F Super-Fine at your favorite hardware dealer's, where this rack is on display. If your dealer doesn't have it, write Libbey·Owens·Ford, Fiber-Glass Division, 4924 Wayne Building, Toledo 3, Ohio.

LOF GLASS Corporation FIBER-GLASS

**FIBER·GLASS**

### Buick Adds Power

[*Continued from page 276*]

halfway up the frame, it's easier to hold on the road.

There are disadvantages to the torque tube. For one thing, it can get noisy unless a lot of care is taken to damp out vibration. For another, there is more unsprung weight, and the car tends to pound on rough roads. But this is a Buick story, and people who like Buicks don't like to admit *any* faults.

#### *Fancy "Front-End Geometry"*

Buick has raised the ante on its directional stability for '54. They have done some interesting things to what the engineers, in their professional gobbledygook, call the front-end geometry. The result is that the car tends to understeer. Put it in a turn, and you have to hold it there. The front wheels don't go whinnying off in the new direction without a backward look at the driver.

I discovered a most welcome additional gizmo the moment I slid behind the wheel of a new Super at the proving ground. Driving a Buick in the winter had always required a cockpit check-out to operate the heating system. Now all you do with the new airplane-type controls is push 'em up and pull 'em down. At one end they're marked "Summer," at the other, "Winter."

When I rolled to a stop after a couple of hours of pleasant driving on rough roads, smooth roads, winding roads, straight roads, on hills and on the high-speed loop of the big test track, I remarked to a Buick engineer that the car was mighty quiet.

"Didn't you people have a whine in the transmission at about 20 miles an hour?" I asked.

"Yes," he said, "we did, last year. But we fixed it. It was just a thing—a gizmo, you might say." END

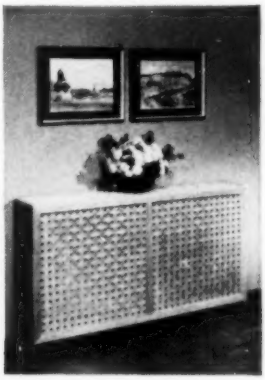
---

### Definition

PATIENCE is the ability to idle your motor when you feel like stripping your gears.—*Public Safety.*

**Aluminum window screens** that last a lifetime are easy to make with Reynolds *Do-It-Yourself* Aluminum, cost little. Mail coupon for free instruction folder.

**Stunning desk and lamp** are beautiful examples of the versatility of Reynolds *Do-It-Yourself* Aluminum. Patterns #542 and #541.



**Radiator cover** made of Reynolds *Do-It-Yourself* Aluminum is handsome, efficient . . . costs surprisingly little. Save up to 75%. Pattern #544.

**This sewing center** will win any homemaker's heart. Yet it's a simple, inexpensive project. Pattern #543.

**Reynolds *Do-It-Yourself* Aluminum is now on sale at hardware and lumber supply dealers in this handy self-service rack.**

# REYNOLDS
## *DO-IT-YOURSELF*
# ALUMINUM
## ...steals the show in home improvement field!

Reynolds *Do-It-Yourself* Aluminum is so easy to use that even the most *amateur* home owners are becoming "professionals" overnight . . . and saving lots of money in the bargain. The secret? This new kind of aluminum is specially engineered for really astonishing workability. You can bend it, saw it, drill it, plane it, join it and shape it, using ordinary hand or power tools.

New Reynolds *Do-It-Yourself* Aluminum comes in plain and embossed sheets, tubes, bars, rods, angles, screen and storm sash sections, Reynolds Reynolon film, and handy, easy-to-use fasteners.

"Easi-Bild"* patterns of the projects pictured on this page can be obtained for a small cost by filling in the coupon below. Each pattern contains complete list of materials needed. Also at your dealers, free, are (1) instructions for making aluminum screens and storm sash, and (2) a "how-to" booklet containing general instructions and suggested projects. Or send coupon.

Reynolds *Do-It-Yourself* Aluminum won't harm ordinary tools. Its use is approved by leading tool manufacturers. Home owners are cautioned, however, to use *only* Reynolds *Do-It-Yourself* Aluminum, because other types may harm ordinary tools. Reynolds *Do-It-Yourself* Aluminum can be identified by the special Seal attached to every piece.

**No special tools** are needed to make and repair things with new Reynolds *Do-It-Yourself* Aluminum. Saw it, plane it, join it, shape it, drill it with ordinary hand or power tools.

*T.M. Reg. Easi-Bild Pattern Company

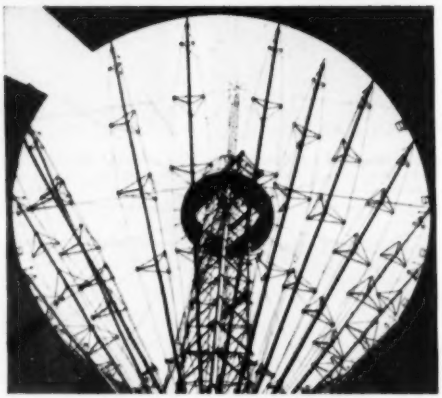
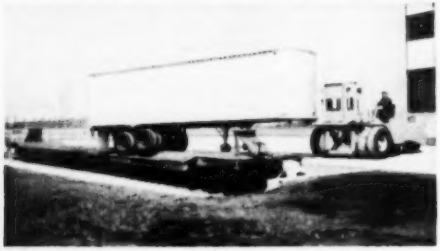
## World's Biggest Ball Awaits Atomic Submarine's Engine



TALL as an 18-story building and 225 feet across, the biggest steel ball in the world is now ready for the atomic-sub engine it will test. How the last sections of the sphere were set in place is shown at right. The massive housing at the Knolls Atomic Power Laboratory, West Milton, N. Y., is extra insurance, GE engineers say, against the remote chance that all safety devices fail simultaneously. The submarine hull, built alongside the ball, will be skidded in through a hole. Water will float the hull to simulate seagoing conditions.

## Loaded Trailers Ride the Rails to Bypass Traffic and Haul More



A NEW railroad car designed to carry loaded truck trailers may cut traffic on main highways. Semitrailers are driven to the nearest railroad freight yard, unhooked and loaded aboard a special flatcar (left). When unloaded many miles nearer their final destination, truck tractors pick up the trailers and complete the delivery. The track-riding General Motors transport car can carry two trailers.

# "We took a tip from the auto industry to give you a new kind of drill"

*says Paul Jones, President, Cummins-Chicago Corp.*

There's an amazing story behind Cummins Ball•Rite 44. It revolutionizes ¼" drill performance.

Until we invented the Ball•Rite principle the craftsman either had to pay a very high price for industrial quality drills—or buy low priced drills that did not meet the performance desired.

We knew that if industrial quality drills could be produced in volume and certain production and engineering prejudices eliminated, their price could be brought down so low that everybody could have their super performance and long life. The answer was to build a product that met industry's high performance standards and produce it at a price that everybody could afford.

The early automobile manufacturers had pretty much the same problem. It was the legendary Ford that combined in one automobile the stamina and durability required by business with a price level that made the automobile the every-day necessity of every family. When the tremendous sales volume of these two markets was combined in one product, sales soared and true mass production was born.

Now, that's exactly what has been accomplished with Cummins Ball•Rite drills. We designed the drill for industrial use and the Ball•Rite 44 today is being used in airplane, automotive and manufacturing industries side by side with drills costing one-third more. Then, by using continuous conveyor belt assembly (instead of the old bench method) we were able to rev production up to hundreds a day and produce the same drill within the price range of the ordinary home-type drill. Instead of having to sell this new Ball•Rite 44 above $40, we were able to price it at $29.95. Both industry and the home user benefitted.

Actually, Cummins took a tremendous gamble in setting up huge volume production lines, but we did it with the confidence that if it could happen in the automotive industry it could happen in the drill business. Our gamble paid off. Both you, the consumer, and industry, bought the Ball•Rite 44 because it gave you performance you would never have been able to touch before at the price.

Every Ball•Rite drill carries the Ball•Rite tag giving its basic industrial specifications. As far as we have been able to find out, it is the only drill on the market carrying a printed tag describing its basic qualities. Here's the tag:

**WHAT BALL•RITE MEANS TO YOU**

Ball•Rite Construction is a combination of the finest specifications in an electric tool and includes:

1. Ball Bearings in the right places.
2. Always Hardened Gears.
3. Always Double-Coil Motor (type always used in industrial drills).
4. Always Dynamically Balanced Armature for smooth flowing power.

So, before you buy any drill get a Ball•Rite 44 into your hands and switch it on. You will feel smooth, abundant power that can only be matched in $40 industrial drills. That power in the 44 drills ¼" in metal in its stride, handles 1" drilling in all kinds of wood, and with carbide tip drills, drives up to ½" holes in concrete.

Say, you know we even use this Ball•Rite 44 drill to power the famous Cummins **do-it Shop** . . . that combines the 7 most wanted home shop tools in one. The 44 is one of the few drills with enough power to handle all the jobs we ask it to do in the **do-it Shop!** To give you an even better picture of this drill's tremendous power, I will be happy to send you a free copy of the beautifully illustrated and interesting "Cummins **do-it Shop** Booklet." This will show you the many time and money-saving operations you can perform when you own a Ball•Rite 44 drill. Please write to me for your free copy today.

The Ball•Rite 44 is sold not only by industrial distributors selling to industry but in your local hardware store. We hope you will be one of the first in your neighborhood to own one of these amazing new drills, to learn the real satisfaction and performance you get from every one of Cummins popular priced, top quality tools.

*Sincerely,* Paul Jones

**America's First Turbo Car**

[*Continued from page 161*]

off the driver's braking foot in keeping it stopped.

As yet, it's something of a mystery car. While it has been driven both at GM's proving ground in Milford, Mich., and on the company's five-mile circular track at its desert proving ground near Phoenix, the engineers haven't opened it up. They don't know what it's capable of.

They know it's tricky. It carried Charles L. McCuen, vice-president in charge of research, over a retaining wall at the test track at Milford. Nobody, including McCuen, knows how it happened. Despite the experience, McCuen retains an absorbing interest in turbines.

***Caltech Tests Firebird Body***

The idea of the Firebird originated with Harley J. Earl, vice-president in charge of styling. He also designed its plastic body. The body was tested in a wind tunnel at the California Institute of Technology.

The Firebird isn't the world's first gas-turbine car. That was built by the Rover Company of England (PSM, June, '50, pp. 98-104). Nor is it the first gas-turbine vehicle in the U. S. The Boeing Airplane Co. has tested turbines in trucks (PSM, Feb. '52, pp. 163-65). But it's the first U. S. high-speed turbine "test bed" on wheels.

Exhibited late in January at GM's annual Motorama at the Waldorf-Astoria Hotel in New York, it will be tested further by engineer-driver Mauri Rose, three-time winner of the Indianapolis 500-mile Memorial Day classic.

His job is made easier because the Firebird can broadcast. Rose quotes instrument readings into a microphone for other engineers who follow him around the track in a radio-equipped station wagon.—*Devon Francis.*

**End Men**

NOBODY in the world is as suspicious as each man at the end of a crosscut saw.—*Wall Street Journal.*

# IT'S NEW!..the Greatest JIG SAW VALUE of All Time

Only $23.50

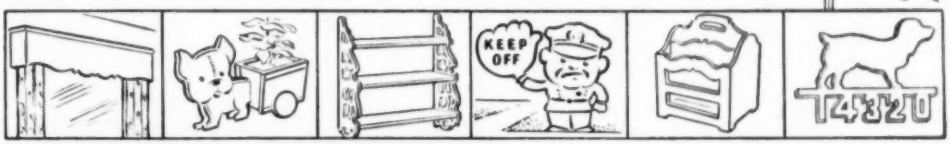
## Compare it! Try it!

**Dollar-for-Dollar,**
**DREMEL MOTO-JIG SAW**
**Out-performs Them All!**

- **Amazing Capacity!** Cuts 1½" wood, 1" plywood, metal, plastic—as fast as you can follow a line!
- **Built-in Rotary Motor!** Never before available at so low a price! Don't confuse with vibrator-type jig saws.
- **Sensational "Rocker Action"!** This revolutionary new principle makes other jig saws out-of-date. Blade is held under constant tension, cannot whip or buckle, lasts far longer!
- **Safest Ever Built!** Blade is completely guarded against finger injuries. Safe for children!
- **Saws Any Direction!** 4-way blade holder takes any length stock. Table raises and lowers so you can use every tooth in the blade. Tilts 45°!

HERE'S JIG SAW MAGIC TO AMAZE YOU! The new DREMEL does more work—faster, easier—than any jig saw anywhere near its price. Driven by a real rotary motor (not a vibrator) it will cut as fast as you can feed the wood. It takes right angle turns at top speed, cuts intricate scrolls impossible for other jig saws. Yet it's rugged enough for major household repair jobs! Use it to make lawn furniture, valances, toys, hundreds of practical projects. The new DREMEL Moto-Jig Saw is so superior to competing models that we challenge you to match it against others costing many dollars more. You'll agree it's the greatest value in jig saw history!

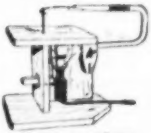
**Hobby Project or Household Repair . . .** Do it with Dremel—and Save!



ANOTHER LONG-TIME FAVORITE WITH CRAFTSMEN!

## DREMEL *Electric* MOTO COPING SAW

A genuine craftsman's tool with dozens of household and workshop uses. Lightweight . . . easy to operate . . . perfect for knick-knacks, corner shelves, intricate scroll work. Cuts through ¾" wood, plastics, rubber and asphalt tile, etc. Perfectly safe for children—women love to use it too! Has only two moving parts, never needs oiling. Unique 4-way blade holder permits cutting any direction—no limit to length of stock it can handle.



**Jig saw plans and 6 project patterns FREE.**

SEE YOUR FAVORITE DEALER: Dremel Tools are sold at hobby shops everywhere. If yours can't supply you, order direct on a five-day trial, moneyback guarantee. Send in full and we ship postpaid. Or, send only $2. now, pay postman balance plus postage and C.O.D. fee.

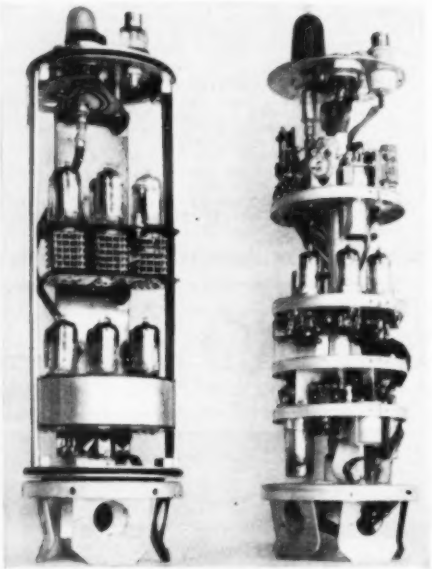
## Plug-In Motor Runs Soapboxer

UNDER the hood of this crate there's a quarter-horse motor with an extension cord that plugs into a garage outlet. An accelerator pedal starts and runs the motor and a V belt drives the wagon's right rear wheel. At the foot of the driveway, the tug of the cord warns Mike Goff of Claremont, Calif., that he's at the end of his rope.



## Navy "Simplifies" Electronics

PROJECT TINKERTOY has mechanized the production of electronic gear for the Navy. At a pilot factory, standardized "building blocks" roll off assembly lines to be strung together by hand or machine to form apparatus like the submarine detector at left above. An equivalent piece of equipment, soldered and wired by hand, is at right.

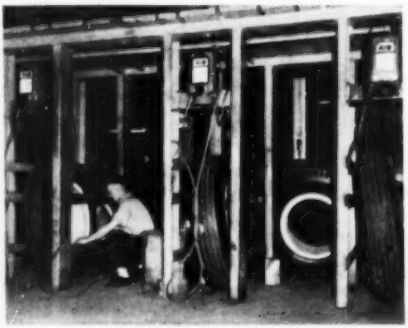
## Family Rides on Two Wheels

A TANDEM bike is fine fun for courtship days. But with marriage and a growing family, something must be added to handle the transportation problem. Easily attached child carriers are the solution offered by Dawes Distributors, Cambridge, Mass. Illustrated above in triple arrangement, they take the Joseph Finn family on its Sunday outing. Inset photograph shows how a seat can be attached to the sloping tube of a lady's bicycle.



## Safety Racks for Big Tires

A BLOWOUT while blowing up a high-pressure truck tire can kill a man. To prevent such accidents, the White Motor Co., Ardmore, Pa., built these steel-frame stalls to protect tire-maintenance men who handle pressure up to 90 pounds.

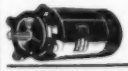
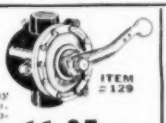
Type R-1. Rated 300 Amps.—30 Volts. Mfd. by Jack & Heintz. Gov't. Acq. Cost $380.00. Shpg. wt. 55 lbs. Dimensions 16" x 10" x 7". F.O.B. Chicago **35.00**

**ITEM #90**—Type P-1, rated 200 Amps.—28 Volts, 2500 RPM. Mfd. by General Electric, Ford, Delco-Remy and Westinghouse. Gov't. Acq. Cost $300.00. Shpg. wt. 55 lbs. Dimensions 15"x9"x6". F.O.B. Chicago .... **22.50**

**ITEM #176**—Type L-3. Rated 25 amps. 24 volts. Manufactured by Leece-Neville Co. Shpg. wt. 30 lbs. Dimensions 12" x 6½" x 5½". F. O. B. Chicago. **16.50**



## SELF-PRIMING HAND FLUID PUMP WITH HANDLE



ITEM #129

Type D-2—Bronze and aluminum construction, ½" pipe thread ports. For general utility hand pump. May be used as a sump pump, barrel pump, fuel transfer pump, for water, oil, gasoline, insecticides, etc. Capacity—200Gal. per hour. Ship. wt. 6 lbs. ..... **11.95** F.O.B. Chicago

## HYDRAULIC SPEED REDUCER with FINGERTIP CONTROL

ITEM #115

**USE FOR:** ● Reamer Drives ● Midget Cars ● Feed Mills ● Canning Machines ● Conveyors ● Lathes ● Milling Machines ● Motor Boats ● Cream Separators ● Garden Tractors ● Pumps

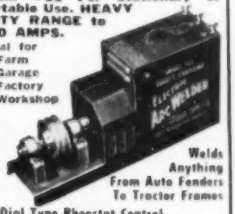
Variable output speeds from 0 to input speed available by moving control handle. Locking handle maintains setting. Use input power of ¼ to 1 H.P. This Westinghouse Oil Gear Unit consists of a variable displacement hydraulic pump feeding a fixed displacement hydraulic motor. Adjustable relief valves set at factory for 100 inch pounds of torque may be reset up to 180 inch pounds. Independent reverse control allows full output power and speed selection in either direction of rotation. Shafts measure ⅝" diam., include keyway. Input rotation is counter-clockwise facing shaft. Recommended input speed not to exceed 750 R.P.M. Over-all dimensions, 7½"x 7½"x11½", Gov't. acquisition cost $428.00. Shpg. wt. 31 lbs. Complete with 2 qts. of oil and full instructions. F.O.B. Chicago. **54.50**

## D.C. ARC WELDER

### NEW MODEL 353

**ITEM #65 For Stationary or Portable Use. HEAVY DUTY RANGE to 250 AMPS.**

**Ideal for**
- Farm
- Garage
- Factory
- Workshop



**Welds Anything From Auto Fenders To Tractor Frames**

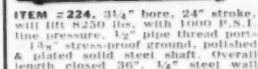
- Dial Type Rheostat Control
- Use 1/16" to 1/4" Rod
- Generator-type Welder
- Reactor Coil for Smooth Even Arc
- Use 7½ H.P. Electric Motor or 10 H.P. Gasoline Engine
- Run at 2500 R.P.M.
- Available with Either Flat Belt or Double V Pulley
- Complete Operating Instructions

Shipping wt. 107 lbs. $350.00 Value.

**Standard Model** F.O.B. Chicago ..... **99.50**

**Deluxe Model** with "Magic Terminal" for low amperage range welding (Between 30-100 amps.) F.O.B Chicago **119.50**

## EXTRA HEAVY DUTY Double Action HYDRAULIC CYLINDER



**ITEM #224.** 3¼" bore, 24" stroke, will lift 8250 lbs. with 1000 P.S.I. line pressure. 1½" pipe thread ports. 1¾" stress-proof ground, polished & plated solid steel shaft. Overall length closed 36". ¼" steel wall cylinder barrel clevis mounting at base and shaft. Features—Tie Rod construction. Honed barrel. Ship. wt. 50 lbs. F.O.B. Chicago **39.60**

## PESCO GEAR TYPE HYDRAULIC PUMP

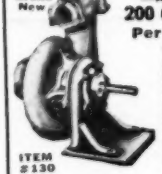
### COMPACT—POWERFUL—RELIABLE

**ITEM #160**. Especially designed for belt drive from fan belt, power take-off, drive pulley, electric motor or small gas engine. Equally suitable for direct coupling. Pedestal type mounting with two bolt holes for ⅜" hold-down bolts. Standard ½" pipe thread inlet and outlet ports. Delivers 4.5 GPM at 1000 PSI at 2800 RPM with 3 HP. Will actuate one Item #224. 3¼" bore, 24" stroke cylinder in 10 seconds. Hardened steel gears turn in dense oilite bronze bearings. Rotation—clockwise facing shaft. Guaranteed trouble-free service. Ship. wt. 6 lbs. F.O.B. Chicago. **22.50**

## CENTRIFUGAL PUMP

### GENERAL MOTORS —ALLISON 200 GALLONS Per Minute

Brand New



ITEM #130

- For Draining Basements
- Fire Fighting
- Irrigation
- Fuel Transfer
- Swimming Pools
- Home water Systems
- Dewatering

For high volume commercial, home and industrial use. Standard 2½" pipe thread inlet, twin 1½" pipe thread outlets. Ball bearing supported ¾" shaft. Easy priming. Rotation, counter-clockwise facing shaft. Gov't. acq. cost $145.00. Complete with full instructions. Ship. wt. 35 lbs. F.O.B. Chicago ..... **39.50**

Will deliver 200 gals. per min. against 65 ft. head using 5.2 H.P. at 3500 R.P.M.

## Brand New DOUBLE ACTION HYDRAULIC CYLINDER

**ITEM #355** 2½" bore and 7½" stroke, 1½" stainless steel piston rod. Lift capacity 5000 lbs., using 1000 lbs. pump pressure. Manufactured by Delco-Remy Division of General Motors Corporation. Clevis mounting on base and piston rod for 7/16" bolt. Overall length closed 21". Distance between centers 19". Supplied with fittings to ⅜" pipe thread. Brand new—in original carton. F.O.B. Chicago **16.00**

**ITEM #355A** Same unit, but supplied with built-in spring to provide cushion effect on power stroke and rapid return. F.O.B. CHICAGO **17.00**

## CONTINENTAL "RED SEAL" 1½ H. P. ENGINE

**ITEM #97**. Power for lawn mowers, garden tractors, pumps, generators, compressors, tillers, rakes, plows, feed mills, milking machines and motor scooters. Brand new Continental "Red Seal" 1½ H.P. gasoline engine. Model AA-7, single cylinder, 4 cycle, with 6:1 gear reducer. Shipping weight 60 lbs. A $74.00 value. Order now. Limited quantities. F.O.B. Chicago **47.50**

## SAVE $20.30 ON THIS Brand New—Pesco HYDRAULIC CONTROL VALVE

ITEM #371V

**For safe, positive control of Hydraulic Cylinders and Motors—**

● BUILT-IN RELIEF VALVE—factory set at 1200 P.S.I. ● FOUR WAY VALVE—OPEN CENTER—with valve in neutral, cylinder is locked in position and pump is unloaded. ● SPRING RETURN TO NEUTRAL ● FULLY BALANCED PLUNGER ● EASILY STACKED INTO 2, 3, or 4 valve combinations for multiple cylinder operation ● 8 gal. per min. capacity, at 1200 P.S.I.—⅜" pipe ports ● CONNECT PUSH RODS TO HANDLE FOR REMOTE CONTROL. ● EASY MOUNTING ● LIST PRICE—$46.80 ● YOU SAVE $20.30. ● DIMENSIONS—9"x4½"x2½"—Ship. wt.—8 lbs. **16.50** F.O.B. Chicago

## BRAND NEW! JUST RELEASED! BLACKHAWK HAND-HYDRAULIC PUMP

**Item #82.** Perfect for Hydraulic Presses, Snow Plows, Farm Wagons, Jacks, and Farm Plows.

A few easy strokes of the 24" handle and you can lift 4000 lbs. using Item 355—Hydraulic Cylinder. Blackhawk Model P-151 complete with built-in oil tank and release valve.

Rated 1200—8400 lbs. P. S. I. Dim. 9"x7"x6". Ship wt. 35 lbs. Worth much more. F.O.B. Chicago..... **22.50**

# BUILD YOUR OWN POWER TOOLS

**SAVE $50 OR MORE**

**Exclusive GIL-BILT Build-It-Yourself Features**
- No machining—build easily with hand tools only
- No "blueprint" reading—step-by-step pictorial plans, full scale patterns, actual photographs
- Sturdy wood, steel, and aluminum construction
- Capacity and performance of commercial tools selling from $60 to $210.00
- Proven design—nationally advertised and sold for 6 years. Satisfied customers around the world

## GIL-BILT 10-INCH TILT/ARBOR SAW

- 27x28 in. table, 13½ in. capacity to front of blade
- 10 in. blade cuts 3½ in. deep, tilts full 45 degrees
- Floor model 34" high, table always stays level
- New Departure ball bearing arbor, ¾" precision shaft turned down for ¾" bore blades, alum. housing, shipped ready to run.
- Jackscrew and 6½ in. dia. handwheel lowers and raises blade
- Cast aluminum miter gauge and self aligning rip fence guide

GIL-BILT Metal Parts Kit includes Plans, ball bearing arbor, miter gauge and bar, rip fence guide, dado insert, jack knobs, jack screw mechanism and handwheel, and all other metal parts (less blade) ..... **$22.95**
Same Kit with 10" Combination Blade **$25.90**
Same Kit with 8" Combination Blade **$24.90**

## GIL-BILT BELT SANDER

- 84 sq. in. sanding surface. Over 4 times the effective area of a 10 in. disc sander.
- Belt operates in either vertical or horizontal position, does all sanding operations.
- Driver drum and pulley turn on sealed New Departure ball bearings; tension drum turns on Chrysler Oilite bronze bearings.
- Spindle and tension mechanisms of cast aluminum, completely machined and assembled.
- Belt travels 1889 ft. per min. Over a MILE of straight sanding action every three minutes. Saves more "elbow grease" than any other tool.

GIL-BILT Metal Parts Kit includes Plans, ball bearing spindle, 4 in. driver drum, 3 in. tension drum, tension mechanism, table tilt segments, rubber tires, cloth sanding belt, and all other metal parts **$16.95.**

## GIL-BILT 12" BANDSAW

- Cuts to center of 24 inch circle
- Handles stock up to 6 inches thick
- 18x18 inch table tilts 45 degrees
- Lower wheel and drive pulley runs on sealed New Departure Ball Bearings; Upper wheel runs on two ¾" bore Oilite Bronze bearings
  - Upper wheel tension and tilt mechanism of cast aluminum, completely assembled
  - Upper and lower blade guides. Each has ball thrust bearing, self-lub bronze jaws
  - Rigid cast aluminum wheels fully machined ready-to-install. Heavy rubber tires
  - Uses standard 78 inch blades up to ¾ in. wide
  - Fully enclosed mechanism for utmost safety

GIL-BILT Metal Parts Kit includes Plans, rubber tires, aluminum wheels, ½ in. blade, ball bearing spindle, tilt mechanism, blade guides, table tilt segments, and all other metal parts ..... **$23.95**

## GIL-BILT 18" BANDSAW

- Cuts to center of 36 inch circle
- Maximum height under top guide 12 inches
- 26x28 in. table tilts 45 degrees
- Floor model. Motor and all moving parts fully enclosed
- Heavy ¾" ball bearing drive shaft. Oilite bronze bearings in upper wheel
- Rigid cast aluminum wheels precision machined, 18⅝ in. dia. with rubber tires
- Upper and lower blade guides. Each has ball thrust bearing, self-lub bronze jaws
- Upper wheel tension mechanism of aluminum and steel, completely assembled

GIL-BILT Metal Parts Kit includes Plans, rubber tires, aluminum wheels, ½ in. blade, drive shaft and bearings, tension mechanism, blade guides, table tilt segments, and all other metal parts ..... **$37.95**

**"I Love to Garden with my ROTO-HOE"**

Yes, women enjoy using the easy-operating ROTO-HOE. And it's still easy to own—sells for the low 1947 price of only $134, *complete*, ready to work for you.

EXTRA DIVIDENDS. Beside the low first cost, there's extra saving because you use the same basic Lauson power unit to operate a complete line of low cost attachments—all easily interchangeable in minutes, and thoroughly "garden Proven". You can pump, spray, saw wood, throw snow, mow, trim, and edge lawns as well as till and cultivate.

GET THE FACTS in our new color catalog, with name and location of nearby dealer.

**START YOUR OWN BUSINESS.** If you are a mechanically-minded young man who would like to start his own dealer business selling and servicing ROTO-HOEs; there may be an opportunity for you in your community. Write us today.

**ROTO-HOE & Sprayer Co., Box 16, Newbury, Ohio**

**DO MORE PLANING JOBS WITH LOW COST BELSAW**

**Exclusive MONEY-MAKING features:**

- Full 12¼ in. x 6 in. capacity

# Fix electrical equipment like a "pro"

WITH THE

# AMPROBE Jr.

VOLT-AMP POCKET TESTER

Now for the first time readers of this magazine can order, direct by mail, the famous trouble-shooting tool used by the top electricians and service men. Amprobe Jr. makes it much easier to diagnose what's wrong with house circuits, shop motors, washing machines and driers, air conditioners, pumps, etc. (You will often be able to trace the source of trouble without even having to look inside the equipment.) Pays for itself over and over. To measure current instantly without connections or wire splicing, just snap the Amprobe around one conductor, insulated or uninsulated. To measure voltage, plug in the test leads. Order your Amprobe Jr. from one of America's leading electrical parts wholesalers, at the low "net" price of *$19.85*, including voltage test leads. Model 500 has a range of 0-100 amp A-C, 0-150/600 volts A-C. Other ranges also available. Send check or money order today. We pay postage. Money back immediately if not completely satisfied. Or write for free literature. BROWNELL DISTRIBUTORS, INC., Dept. PS24, 55 Lispenard Street, New York. 690 Murphy Street, Atlanta, Georgia.

## GET 150 MILES PER GALLON

**ENGINEERS HAVE PROVEN THIS POSSIBLE**

The New Improved Electronic Spark Intensifier is only one of the many ways you can gain "peak" performance. The manufacturer guarantees the following results or it costs you nothing!

**✓ Quick Starts On Cold Mornings**
**✓ More Power ✓ Better Mileage**

Easily installed in the center hole of the distributor cap of all cars, trucks and tractors, the intensifier boosts the high voltage passing through the distributor . . . giving a "hotter spark." This permits a wider spark gap which reduces misfiring and consequent ring and cylinder wear. A built in resistor protects plugs and other ignition points. FREE TRIAL, send $2.00 cash, check or money order . . . if not fully satisfied, return for full refund.

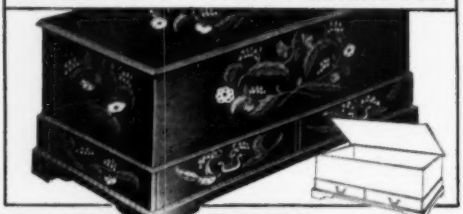
## *MAKE it at home... with* HOMASOTE



WITH OUR CONSTRUCTION PATTERN YOU BUILD THIS ATTRACTIVE

# STORAGE CHEST *easily and at minimum cost*

You build this storage chest in a weekend. Overall size is 11 cubic feet . . . ample space in top for linens, blankets, etc.; two full-depth bottom drawers. *You use no blueprints to build this chest.* Our simplified Easi-Bild* Pattern #269 specifies all materials – shows how to cut each piece to exact size – how to assemble and decorate finished chest – like a professional.

The major material used is *weatherproof* Homasote – Type RD – 11/16" thick – *permanently crackproof* – one of the strongest building materials you'll ever use. Yet it saws, nails, takes paint or stain – just like wood. Mail the coupon for your pattern and Homasote literature.

# ALWAYS THE SAME

...today, tomorrow and tomorrow

Stable as the alphabet! Go out today and buy any product of any good manufacturer's brand...ask for the same thing tomorrow, or weeks from now . . . match 'em up, and they're uniformly good, or *better*.

This uniformity is no accident. Every manufacturer works hard at it because he knows that only *unfailing goodness* will keep you buying his product. So he's mighty sure never to let quality slip. If he changes his product at all, you can bet it's a change for the better.

This goes for everything from a *bobby* pin to an automobile—just another reason for staying with your favorite brands for years and years.

*For news of the goods that are always good, read the ads in this magazine.*

Galvic Cell Shields • Cadmium Alloy Grids • Capillary Separators • Plates Hydra Set with activated oxydes • European Voltic Pile Construction • Built-in water recapturing device • Baffle Plate Vents • Deep Well Water Reservoir.

**MOTOR LIFE MAGAZINE**

Life-Long Battery Mfg. Corp.
11766 W. Pico, Los Angeles, Calif.
Gentlemen: After having read the report of the test on the **Life-Long Battery** conducted by an independent testing laboratory, we thought it would be wise to test it ourselves. These results, as you already know, were even better than the ones submitted to us. We then decided to hire the services of the Triplett-Barton **Testing Laboratories** to verify our results. These results again verified everything you have ever said about your **Battery.** We are sending you a certified and notarized copy of the tests. In our opinion you have an excellent **Battery** and with normal care should last your guarantee period of ten years. The recuperative characteristics of the **Life-Long Battery** are amazing. Sincerely, **Don Werner,** Technical Editor of Motor Life magazine.

***Notarized Independent Lab reports and automotive editor prove the following facts on LIFE-LONG BATTERIES:***

- 300% Greater Capacity.
- Self Generating. Recharges in 10 seconds after discharge.
- Instant Amperage Output of 2000 Amperes at 40° below zero.
- Amazing Watt-Hour capacity.
- Develops full rated capacity of 6 volts at 250 amperes at 40° below zero.
- Only battery with a money back free replacement feature in Guarantee.
- Longest guarantee of any battery in the world (full 10 years).

## is what I made with the FOLEY LAWN MOWER SHARPENER

. . . and I can sharpen all power mowers. No one can go wrong with the Foley machine."—V. J. Patterson wrote us.

Get in this profitable business where you take in CASH right from the start—and build a steady repeat business too. 99¢ of every dollar you take in is YOUR profit! The Foley handles all makes of hand and power mowers. Leave handles on—with the Foley you can turn out more mowers per hour.

FREE PLAN shows how to start—no experience needed. Foley prices are low—easy payments available. Get set now for big profits this Spring and Summer. Send coupon today—no salesman will call.

"In my home town of 5,000 I paid for the Foley 4 or 5 times over the first season. I also put a $1035 oil furnace in my new home." R. Mathews

"We sharpened nearly 1000 mowers our first season and gained a reputation for the best work." I. W. Kemper

## It's easy to make these

# REPAIRS

*You* can make loose metal, wood, or plastic parts tight; anchor bolts in concrete to stay; seal cracks in metal; tighten loose screws and fixtures in wood, metal or tile—with Smooth-On No. 1, the iron cement of many uses. Just mix, and fix. Smooth-On No. 1 hardens quickly like iron, and expands as it sets. Forced into any opening, its unique expanding action makes the repair. Keep a can on hand, it will not deteriorate. Smooth-On No. 1 is at your hardware store.

## FREE *Repair Handbook*

40 pages, many illustrations, easy directions for ingenious time and money saving repairs you can make yourself. Write for your free copy.

# Make $20 to $30 a Week EXTRA MONEY

## Make Up to $3 or $4 an Hour in Spare Time—Filing Saws by Machine

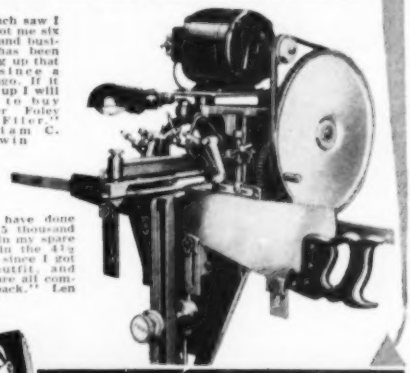
- Turn your spare time into CASH—sharpening saws with a Foley Automatic Saw Filer Pays up to $3 or $4 an hour. You will find you can make $20 to $30 a week in your spare time as a starter.

You can work in your basement or garage—no experience necessary. "The first saw I sharpened with my Foley Filer came out 100%"—writes Clarence E. Parsons. No canvassing—"I advertised in our local paper and got in 93 saws"—says M. L. Thompson. The Foley is the only machine with which you can file all hand saws, also band saws and cross-cut circular saws.

## SEND FOR FREE BOOK "MONEY MAKING FACTS"

Shows how you can get business from home owners, farmers, carpenters, schools, factories, etc. With a small investment, no overhead, no stock of goods to carry, you can get right into a cash business,—and possibly later on develop into a full-time repair shop. Send coupon today for Free Book. No salesman will call.

"Each saw I filed got me six more and business has been picking up that way since a year ago. If it keeps up I will have to buy another Foley Saw Filer." William C. Baldwin



"I have done 4 or 5 thousand saws in my spare time in the 4½ years since I got the outfit, and they are all coming back." Len Crego

# Expert Testers Prepare New PSM Quiz

WAS it worth your while to read this issue of POPULAR SCIENCE MONTHLY? All right, then, do you want to prove it?

Give yourself the test in the adjoining column. It was prepared by the attractive pair of young quizzers above. They are experts at asking questions. The gentleman is Stanford E. Taylor, head of New York's Educational Developmental Laboratories. The lovely lady is Helen Frackenpohl, a colleague who has collaborated with Taylor in writing four books on their special field of study.

Both hold master's degrees from New York University. Both are members of the staff of the Washington Square Reading Center, largest of its kind in the U. S.

Already, at 26, they are authorities on testing the reading ability of persons of all ages and all kinds of education. They have an armory of machines, including an eye-movement camera, for studying how a person's eyes and mind react to a page of print, as they're doing in the picture above.

Now they're going to feed you questions each month that will enable you to find how much you've seen and retained of the scientific and practical information in your current issue of PSM.

Nobody's keeping score but you. However, you might like to know that if you get fewer than half of the answers right, *we're* probably to blame; if you get at least seven right, you're in the groove; if you get them all right, maybe *you* ought to be asking the questions.

## How Much Did You Learn?

Now you can sample how much you remember of the useful and interesting information packed into this issue of POPULAR SCIENCE MONTHLY. The quiz below was prepared by Stanford E. Taylor and Helen Frackenpohl of the Educational Developmental Laboratories and the Washington Square Reading Center, New York. After each answer is a page reference to the article on which the question was based.

1. ***Over 14 million Ford V-8 engines have been built since their introduction over***
   a. 18 years ago
   b. 21 years ago
   c. 25 years ago

2. ***Venezuela's new mountain superhighway, the world's most expensive road, cost***
   a. $6,000,000 a mile
   b. $600,000 a mile
   c. $60,000 a mile

3. ***In selecting flooring, remember that***
   a. any grade of wood will give a good sound floor
   b. higher grades are the most durable
   c. cheaper grades are less attractive

4. ***The amazing thing about the "flying wing" seed is***
   a. it can glide more than 1,000 feet
   b. its thin but strong wings
   c. the flexing ability of the wings

5. ***The main reason South Africa seems a plausible starting point for the human race is***
   a. its temperature has been unusually constant
   b. its land surface has remained relatively undisturbed through the centuries
   c. the first apes were found there

6. ***Studless partitions and closet walls are made possible by the use of***
   a. panels with internal structural supports
   b. gypsum backed with hardboard
   c. overlap technique in mounting gypsum

7. ***The automobile manufacturer with the largest production capacity is***
   a. Chevrolet
   b. Ford
   c. Plymouth

8. ***Joe Resnick built a 12-million-dollar business in six years by***
   a. manufacturing the first inexpensive TV antennas
   b. manufacturing the first preassembled TV antennas
   c. installing and servicing TV antennas

9. ***In using a glass cutter, the important thing is to***
   a. make your scratch uniform and unbroken
   b. make your scratch straight and true
   c. make your scratch deep enough

10. ***Building playground equipment and shelves with pipe is simple because of***
    a. new, faster cutting tools
    b. new aluminum connectors
    c. inexpensive bending equipment

*ANSWERS: 1. b—p. 136; 2. a—p. 110; 3. a—p. 241; 4. c—p. 128; 5. b—p. 172; 6. b—p. 211; 7. a—p. 132; 8. b—p. 117; 9. a—p. 187; 10. b—p. 201.*

# GET BEDROCK FACTORY PRICES!

# Why did you change to Camels, WILLIAM HOLDEN?

**"With so many people smoking Camels, I figured they must be good! So I tried them—found their cool mildness and swell flavor suit my taste to a T! You ought to try Camels yourself!"**

WILLIAM HOLDEN, star of "Forever Female", is another on the big list of Hollywood personalities who prefer America's most popular cigarette, Camel!

*for Mildness and Flavor*

## CAMELS AGREE WITH MORE PEOPLE

THAN ANY OTHER CIGARETTE!

**Make your own 30-day Camel mildness test—** you'll see how well Camels' mildness and flavor suit you.

R. J. Reynolds Tobacco Co., Winston-Salem, N. C.

YOU, TOO, rate the cigarette that rates *best* with the *most* smokers! After all, Camels' costly tobaccos *assure* you a cool, cool mildness, a rich, exclusive flavor that other brands can't match! So *try* Camels – today. Smoke only Camels for 30 days. Let your own sense of good taste tell *you* why Camels' flavor and mildness agree with more people than *any* other cigarette!
